QUESTION 1

Which of the following is the default instance name in an SQL Server 2012 installation?

- A. SQLSERVER12
- B. MSSQLSERVER
- C. MSSQL
- D. 2012SQL

Correct Answer: B

References: [https://msdn.microsoft.com/en-us/library/ms143547\(v=sql.110\).aspx](https://msdn.microsoft.com/en-us/library/ms143547(v=sql.110).aspx)

QUESTION 2

Which of the following is NOT a database role that you can assign users in SQL Server 2012?

- A. db_ddladmin
- B. db_owner
- C. db_datawriter
- D. db_databaseadmin

Correct Answer: D

QUESTION 4

You administer a Microsoft SQL Server environment. One of the SQL Server instances contains a database named Sales.

You plan to migrate Sales to Microsoft Azure SQL Database.

To do so, you need to implement a contained database.

What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Set database containment to AZURE.
- B. Enable server property contained database authentication.
- C. Disable server property cross db ownership chaining.
- D. Set database containment to PARTIAL.
- E. Disable server property contained database authentication.
- F. Set database containment to FULL.

Correct Answer: BD

QUESTION 5

Note: This question is part of a series of questions that use the same set of answers choices. An answer choice may be correct for more than one question in the series.

You administer a Microsoft SQL Server database server that hosts a transactional database and a reporting database. The transactional database is updated through a web application and is operational throughout the day. The reporting database is only updated from the transactional database.

The recovery model and backup schedule are configured as shown in the following table:

Database	Description
Transactional database	<p>Recovery model:</p> <ul style="list-style-type: none">• Full <p>Backup schedule:</p> <ul style="list-style-type: none">• Full database backup: midnight, daily• Differential database backup: on the hour, every two hours starting at 02:00 hours except at 00:00 hours• Log backup every half hour, except at the times of full and differential backups
Reporting database	<p>Recovery model:</p> <ul style="list-style-type: none">• Simple <p>Backup schedule:</p> <ul style="list-style-type: none">• Full database backup: 01:00 hours daily• Differential database backup: 13:00 hours daily <p>Data updates:</p> <ul style="list-style-type: none">• Changes in data are updated from the transactional database to the reporting database at 00:30 hours and at 12:30 hours• The update takes 15 minutes

One of the hard disk drives that stores the reporting database fails at 23:32 hours.

You need to ensure that the reporting database is restored. You also need to ensure that data loss is minimal.

What should you do?

- A. Perform a page restore.
- B. Perform a partial restore.
- C. Perform a point-in-time restore.
- D. Restore the latest full backup.
- E. Restore the latest full backup. Then, restore the latest differential backup.
- F. Restore the latest full backup, and restore the latest differential backup. Then, restore the latest log backup.
- G. Restore the latest full backup, and restore the latest differential backup. Then, restore each log backup taken before the time of failure from the most recent differential backup.
- H. Restore the latest full backup. Then, restore each differential backup taken before the time of failure from the most

recent full backup.

Correct Answer: E

To recover the database, you must restore the latest full backup and then restore the latest differential backup.

Incorrect Answers:

A: A page restore is used to repair isolated damaged pages. It is faster than a file restore id only a few individual pages are damaged.

B: Partial restores allow a database that contains multiple filegroups to be restored and recovered in stages. It works with all recovery models, but is more flexible for the full and bulk-logged models than for the simple model.

C: Point in time restores are not supported for the simple backup model as log files are not part of the backup.

D: The latest full backup was performed at 01:00 hours, 22 hours and 32 minutes before the hard disk failure. A differential backup was made at 13:00 hours, 10 hours and 32 minutes before the hard disk failure. A differential backup contains

data that has been added or updated since the last full backup and should be restored to minimize data loss.

F, G: There is not log backup in the simple backup model.

H: Only the latest differential backup needs to be restored.
