QUESTION 1

DRAG DROP

You are configuring a Microsoft SQL Server 2012 server and Setting up a new database.

You need to ensure that the following requirements are met:

Provide access to the database for a Windows group named CORP/Employees.

The database can be moved to another server with no additional changes to the security configuration of the database or server.

What should you do? (To answer, move the appropriate action or actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Actions	Answer Area
Create the database and set the Trustworthy setting to ON .	
Create the database and set the Containment setting to Partial .	
Create a login named CORP\Employees on the SQL Server instance.	
Create a contained database user named CORP\Employees in the database.	
Use sp_configure to change the contained database authentication setting to 1.	
Create a database user linked to the CORP\Employees login.	

www.Lead4Pass.com

Two circular arrows (one pointing right, one pointing left) are positioned between the Actions and Answer Area columns.

Correct Answer:

Actions

- Create the database and set the Trustworthy setting to ON.
-
- Create a login named CORP\Employees on the SQL Server instance.
-
-
- Create a database user linked to the CORP\Employees login.

Answer Area

- Use sp_configure to change the contained database authentication setting to 1.
- Create the database and set the Containment setting to Partial.
- Create a contained database user named CORP\Employees in the database.

QUESTION 2

You administer a Microsoft SQL Server 2012 database.

Users report that an application that accesses the database displays an error, but the error does not provide meaningful information. No entries are found in the SQL Server log or Windows event logs related to the error.

You need to identify the root cause of the issue by retrieving the error message.

What should you do?

- A. Update all stored procedure to use a TRY...CATCH block.
- B. Create a SQL Profiler session to capture all ErrorLog and EventLog events.
- C. Flag all stored procedures for recompilation by using sp_recompile.
- D. Execute sp_who.

Correct Answer: A

QUESTION 3

You are migrating a database named Orders to a new server that runs Microsoft SQL Server.

You attempt to add a SQL login [User1], to the database. However, you receive the following error message:

"User already exists in current database."

You need to configure the [User1] login to be able to access the Orders database and retain the original permissions. You need to achieve this goal by using the minimum required permissions.

Which Transact-SQL statement should you use?

- A. DROP USER [User1]; CREATE USER [User1] FOR LOGIN [User1]; ALTER ROLE [db_owner] ADD MEMBER [User1];
- B. ALTER SERVER ROLE [sysadmin] ADD MEMBER [User1];
- C. ALTER USER [User1] WITH LOGIN [User1];
- D. ALTER ROLE [db_owner] ADD MEMBER [User1];

Correct Answer: C

The WITH LOGIN clause enables the remapping of a user to a different login.

QUESTION 4

You are developing a database application by using Microsoft SQL Server 2012. An application that uses a database begins to run slowly.

You discover that a large amount of memory is consumed by single-use dynamic queries.

You need to reduce procedure cache usage from these statements without creating any additional indexes.

What should you do?

- A. Add a HASH hint to the query.
- B. Add a LOOP hint to the query.
- C. Add a FORCESEEK hint to the query.
- D. Add an INCLUDE clause to the index.
- E. Add a FORCESCAN hint to the Attach query.
- F. Add a columnstore index to cover the query.
- G. Enable the optimize for ad hoc workloads option.
- H. Cover the unique clustered index with a columnstore index.
- I. Include a SET FORCEPLAN ON statement before you run the query.
- J. Include a SET STATISTICS PROFILE ON statement before you run the query.
- K. Include a SET STATISTICS SHOWPLAN_XML ON statement before you run the query.
- L. Include a SET TRANSACTION ISOLATION LEVEL REPEATABLE READ statement before you run the query.
- M. Include a SET TRANSACTION ISOLATION LEVEL SNAPSHOT statement before you run the query.
- N. Include a SET TRANSACTION ISOLATION LEVEL SERIALIZABLE statement before you run the query.

Correct Answer: G

QUESTION 5

You develop three Microsoft SQL Server 2012 databases named Database1, Database2, and Database3.

You have permissions on both Database1 and Database2.

You plan to write and deploy a stored procedure named `dbo.usp_InsertEvent` in Database3. `dbo.usp_InsertEvent` must execute other stored procedures in the other databases.

You need to ensure that callers that do not have permissions on Database1 or Database2 can execute the stored procedure.

Which Transact-SQL statement should you use?

- A. USE Database2
- B. EXECUTE AS OWNER
- C. USE Database1
- D. EXECUTE AS CALLER

Correct Answer: B
