QUESTION 1

You need to select the appropriate mode for the Sales database. Which mode should you select?

- A. ROLAP
- B. Direct Query
- C. MOLAP
- D. In-Memory

Correct Answer: B

QUESTION 2

You are designing a partitioning strategy for a large fact table in a Manufacturing data warehouse.

Tens of millions of new inventory fact records are loaded into the data warehouse weekly, outside of business hours. Most queries against the database are generated by reports and by cube processing. Data is frequently queried at the day level and occasionally at the month level.

- A. Partition the inventory fact table by month, and compress each partition.
- B. Partition the inventory fact table by day, and compress each partition.
- C. Partition the inventory fact table by year.
- D. Partition the inventory fact table by week.

Correct Answer: B

QUESTION 3

You have two servers named Data5 and Data6. Both servers have SQL Server installed. Both servers have a SQL Server Integration Services (SSIS) catalog. You are preparing a disaster recovery plan for a business intelligence (BI) solution. You need to ensure that the SSIS catalog from Data5 can be restored to Data6. What should you do on Data5?

- A. Run `sp_configure clr enabled\, 1`.
- B. Run `sp_configure recovery interval\, 0`.
- C. Back up the master database and its database.
- D. Back up the SSISDB database and its master key.

Correct Answer: C

QUESTION 4

You need to select the appropriate model type for the Finance database. Which model type should you select?

- A. Star schema
- B. Multidimensional
- C. Relational
- D. Tabular with PowerPivot

Correct Answer: B

QUESTION 5

You are redesigning a SQL Server Analysis Services (SSAS) database that contains a cube named Sales. Before the initial deployment of the cube, partition design was optimized for processing time. The cube currently includes five

partitions named FactSales1 through FactSales5. Each partition contains from 1 million to 2 million rows.

The FactSales5 partition contains the current year's information. The other partitions contain information from prior years; one year per partition. Currently, no aggregations are defined on the partitions.

You remove fact rows that are more than five years old from the fact table in the data source and configure query logs on the SSAS server.

Several queries and reports are running very slowly.

You need to optimize the partition structure and design aggregations to improve query performance and minimize administrative overhead.

What should you do?(More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Use the Usage-Based Optimization Wizard to create aggregations for the current partitions.
- B. Use the Aggregation Design Wizard to create aggregations for the current partitions.
- C. Combine all the partitions into a single partition. Use the Usage-Based Optimization Wizard to create aggregations.
- D. Combine all the partitions into a single partition. Use the Aggregation Design Wizard to create aggregations.

Correct Answer: A
