QUESTION 1

An existing cube dimension that has 30 attribute hierarchies is performing very poorly. You have the following requirements:

Implement drill-down browsing.

Reduce the number of attribute hierarchies but ensure that the information contained within them is available to users on demand.

Optimize performance.

You need to redesign the cube dimension to meet the requirements.

What should you do?(More than one answer choice may achieve the goal. Select the BEST answer.)

A. set the AggregateFunction property to Sum on all measures. Use the SCOPE statement in a Multidimensional Expressions (MDX) calculation to tune the aggregation types.

B. Set the AttributeHierarchyOptimizedState property to FullyOptimized on the attribute hierarchies.

C. Create user-defined hierarchies. For the attributes sourced by the levels of the user- defined hierarchies, set the RelationshipType property to Rigid. Run incremental processing.

D. Remove as many attribute hierarchies as possible from the dimension. Reintroduce the information in the attribute hierarchies as properties. Implement natural hierarchies and set the AttributeHierarchyVisible property to False for attributes used as levels in the natural hierarchies.

Correct Answer: D

QUESTION 2

You need to deploy a solution for the planned self-service reports that will be used by the sales department managers. What is the best solution you should deploy? More than one answer choice may achieve the goal. Select the BEST answer.

A. A filter

B. A KPI

C. A calculated column

D. A measure

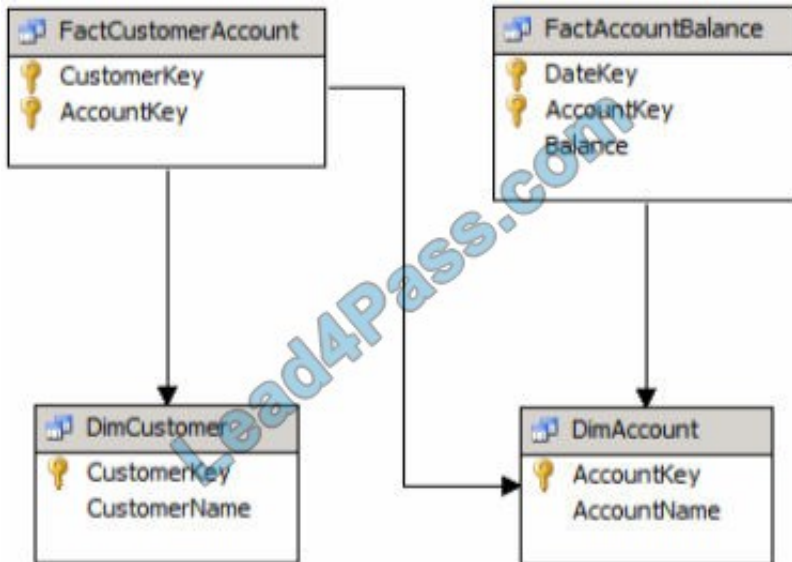

Correct Answer: B

QUESTION 3

HOTSPOT

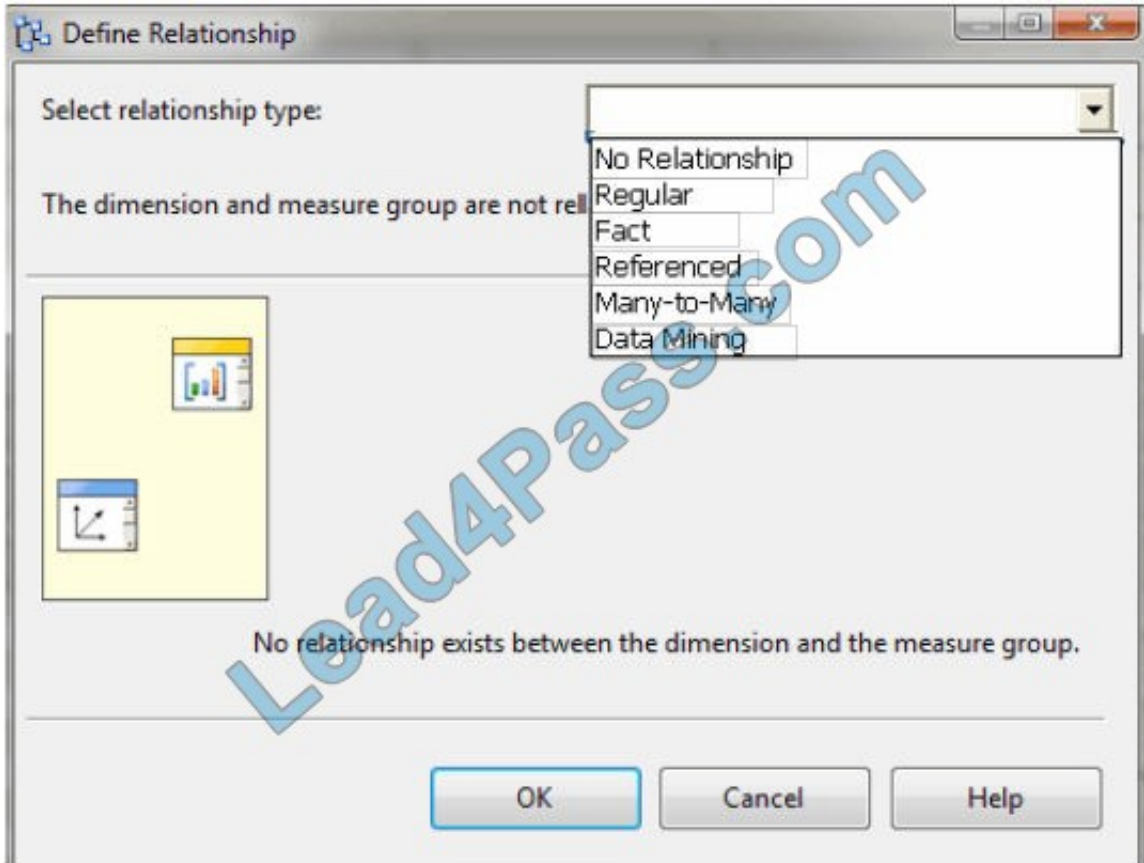

You are developing a SQL Server Analysis Services (SSAS) cube. A dimension named Customer is based on the DimCustomer table. A subset of the data source view is shown in the following graphic.

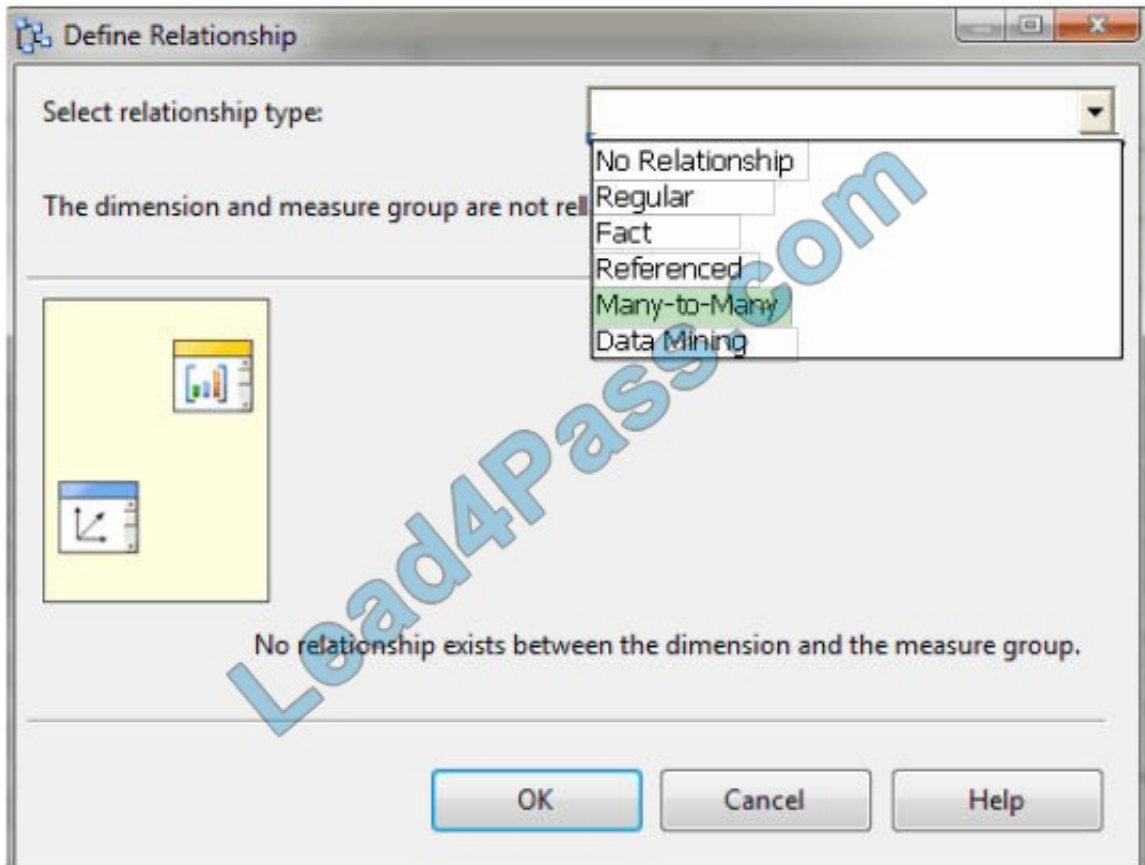

You need to relate the Customer dimension to the AccountBalance measure group.

Which relationship type should you choose To answer, select the appropriate option from the dropdown list in the dialog box.

Hot Area:

Correct Answer:

QUESTION 4

You need to select an appropriate tool for creating the Regional Sales report.

Which tools or tools should you use (Each correct answer presents a complete solution. Choose all that apply.)

- A. Power View, using a table configured for vertical multiples
- B. Excel 2010, using a PivotTable
- C. Report Builder, using a Matrix
- D. Power View, using a table configured for horizontal multiples

Correct Answer: BC

QUESTION 5

You are designing a SQL Server Integration Services (SSIS) solution. The solution will contain an SSIS project that includes several SSIS packages. Each SSIS package will define the same connection managers and variables.

You have the following requirements:

Ensure that the deployment model supports changing the content of connection strings by using parameters at execution time.

Ensure that the deployment model automatically starts from calls to the catalog.start_execution stored procedure in the SSISDB database.

Maximize performance at execution time.

Minimize development effort.

You need to design a solution that meets the requirements.

What should you do(More than one answer choice may achieve the goal. Select the BEST answer.)

A. Use a package deployment model. Use a SQL Server package configuration with a common filter. Change the contents of the SSIS Configurations table at runtime.

B. Use a project deployment model. Configure connections in an XML configuration file referenced by an environment variable that corresponds to the SQL Server environment of each SSIS package.

C. Use a package deployment model. Save each SSIS package to a file share that can be accessed from all environments.

D. Use a project deployment model. Modify connection manager properties to use project parameters. Ensure that the SSISDB database is created.

Correct Answer: D
