QUESTION 1

HOTSPOT

You are configuring internal virtual networks to support multitenancy communication between tenant virtual machine networks and remote sites.

You have a tenant named Tenant1.

You need to enable Border Gateway Protocol (BGP) for Tenant1.

Which commands should you run? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

The interface shows two columns of command options, each with a dropdown arrow in the top right corner. The left column contains three options: "Add-BgpRouter", "Enable-RemoteAccessRoutingDomain", and "Install-RemoteAccess". The right column contains three options: "-MsgAuthentication", "-Multitenancy", and "-Passthru". Below the right column is the text "-Name Tenant1 -Type All -PassThru". A diagonal watermark "www.Lead4Pass.com" is visible across the options.

Correct Answer:

The interface is identical to the one above, but the correct answers are highlighted in green. In the left column, "Install-RemoteAccess" is highlighted. In the right column, "-Multitenancy" is highlighted. The text "-Name Tenant1 -Type All -PassThru" remains unhighlighted. A diagonal watermark "www.Lead4Pass.com" is visible across the options.

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some questions sets might have more than one correct solutions, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com. The forest contains a member server named Server1 that runs Windows Server 2016. All domain controllers run Windows Server 2012 R2.

Contoso.com has the following configuration:

```
PS C:\> (Get-ADForest).ForestMode
Windows2008R2Forest

PS C:\> (Get-ADDomain).DomainMode
Windows2008R2Domain
PS C:\>
```

You plan to deploy an Active Directory Federation Services (AD FS) farm on Server1 and to configure device registration.

You need to configure Active Directory to support the planned deployment. Solution: You raise the forest (domain) functional level to Windows Server 2012 R2.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

For a Windows Server 2012 R2 AD FS server, this solution would work. However, new installations of AD FS 2016 require the Active Directory 2016 schema (minimum version 85). References: <https://technet.microsoft.com/en-us/windows-server-docs/identity/ad-fs/operations/configure-device-based-conditional-access-on-premises>

QUESTION 3

HOTSPOT

You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2016. Server1 and Server2 connect to the same network.

Server1 and Server2 have virtual switches configured as shown in the following table.

Switch name	Host	Type	VLAN ID
Switch1	Server1	External	2
Switch2	Server2	External	4
Switch3	Server2	Internal	<i>Not applicable</i>

You have nine virtual machines configured as shown in the following table.

Virtual machine name	Connected to	VLAN ID
VM1	Switch1	2
VM2	Switch1	<i>Not applicable</i>
VM3	Switch1	4
VM4	Switch2	2
VM5	Switch2	<i>Not applicable</i>
VM6	Switch2	4
VM7	Switch3	2
VM8	Switch3	<i>Not applicable</i>
VM9	Switch3	4

All of the virtual machines are configured to have IP addresses from the same network segment. The firewall on each of the virtual machines is configured to allow network connectivity. To which virtual machines can you connect from VM1 and VM2? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Virtual machines to which you can connect from VM1:

▼

- VM4 only
- VM4 and VM7
- VM2, VM4, and VM5
- None

Virtual machines to which you can connect from VM2:

▼

- VM5 only
- VM1 and VM3
- VM5 and VM8
- VM5, VM7, VM8, and VM9

Correct Answer:

Answer Area

Virtual machines to which you can connect from VM1:

VM4 only
VM4 and VM7
VM2, VM4, and VM5
None

Virtual machines to which you can connect from VM2:

VM5 only
VM1 and VM3
VM5 and VM8
VM5, VM7, VM8, and VM9

QUESTION 4

You have a server named Served that runs Windows Server 2016. Server1 will be used as a VPN server. You need to configure Server1 to support VPN Reconnect. Which VPN protocol should you use?

- A. PPTP
- B. L2TP
- C. SSTP
- D. IKEv2

Correct Answer: D

An IKEv2 VPN provides resilience to the VPN client when the client either moves from one wireless hotspot to another or switches from a wireless to a wired connection. This ability is a requirement of VPN Reconnect

QUESTION 5

DRAG DROP

You have a server named Server1 that runs Windows Server 2016.

On Server1 you use the Basic template to create a new Data Collector Set named CollectorSet1.

You need to configure data collection for the performance counters. The configuration must support the following requirements:

Data collection must run on a schedule.

Data collection must stop if there is less than 1 GB of free disk space. What should you modify to meet each requirement? To answer, drag the appropriate settings to the correct requirements. Each setting may be used once, more than once, or not at all. You may need to drag the Split bar between panes or scroll to view content.

Select and Place:

Correct Answer:
