QUESTION 4

You are developing a Windows Store app by using JavaScript. The app will be installed on five devices. The app will use certificates to secure communications between the five devices.

Information sent through the app must be decrypted only by the intended recipient device.

You need to complete the certificate enrollment.

What should you do?

- A. Create a single certificate enrollment request on one device and import the certificate to the other four devices.
- B. Create a single group certificate enrollment request on one device and share the public and private keys with the other four devices.
- C. Create a certificate enrollment request on each device and install the respective response on each device.
- D. Create a single certificate enrollment request on one device and share only the public key with the other four devices.

Correct Answer: C

QUESTION 5

A Microsoft Visual Studio solution contains a Windows Store app project that is written by using JavaScript code. You add a Windows Runtime Metadata file named Contoso.winmd to the solution.

The WinMD component is written by using C# code.

The Windows Store app must consume the WinMD component.

You need to ensure that IntelliSense can identify the methods of the WinMD component as soon as possible.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

	Answer Area
Reference the Contoso project in the JavaScript project.	
Build the solution.	
Consume the WinMD component.	
Create an instance of the WinMD component.	

Correct Answer:

	Answer Area
	Consume the WinMD component.
	Create an instance of the WinMD component.
	Build the solution.
	Reference the Contoso project in the JavaScript project.
