QUESTION 1

You are developing an app that will be used to purchase and share music. Users will be allowed to share only content that they have purchased.

You need to display a message within the Share charm when users attempt to share content that they have not purchased. What should you do?

A. Use a toast notification.

B. Use the SetText() method of the DataPackage object.

C. Set the LegalInformation property of the DataPackage object.

D. Use the FailWithDisplayText() method of the DataRequest object.

Correct Answer: D

Use the FailWithDisplayText method when your app is unable to supply a DataPackage to a target app. This method cancels the share operation and supplies a text message to the target app. The target app can then display this text to the user to explain why the share operation failed.

QUESTION 2

You develop a Windows Store app.

The Capabilities section of the app manifest is configured as shown in the exhibit. (Click the Exhibit button.)

Exhibit

Capabilities:

☐ Enterprise Authentication
☑ Internet (Client)
☐ Internet (Client & Server)
☑ Location
☐ Microphone
☐ Music Library
☑ Pictures Library
☐ Private Networks (Client & Server)
☐ Proximity
☐ Removable Storage
☐ Shared User Certificates
☑ Videos Library
☐ Webcam

Close

To answer, complete each statement according to the information presented in the exhibit. Each correct selection is worth one point.

Hot Area:

Answer Area

From a removable storage device, the app ...

can read data only.
can read and write data only.
cannot read or write data.

From the Pictures library, the app ...

can read data only.
can read and write data only.
can read, write data and delete.

Correct Answer:

Answer Area

From a removable storage device, the app ...

- can read data only.
- can read and write data only.
- cannot read or write data.

From the Pictures library, the app ...

- can read data only.
- can read and write data only.
- can read, write data and delete.

QUESTION 3

You are developing a Windows Store app.

You need to provide users with multiple ways to open the app. Each way must open a different page of the app.

Which two components should you use? (Each correct answer presents part of the solution. Choose two.)

A. the SecondaryTile class

B. ms-appx Uniform Resource Identifiers (URIs)

C. the AppSettings file

D. the Frame.Navigate() method

E. shortcuts that have parameters

Correct Answer: AD

A: Secondary tiles are associated with a single parent app. They are pinned to the Start screen to provide a user with a consistent and efficient way to launch directly into a frequently used area of the parent app. This can be either a general subsection of the parent app that contains frequently updated content or a deep link to a specific area in the app.

Incorrect:

Not B: You can use URI (Uniform Resource Identifier) schemes to refer to app files that come from the app\\'s package, data folders, or resources.

Use the ms-appx and ms-appx-web schemes to refer to app files that come from the app\\'s package (see App packages and deployment). Such files are typically static images, data, code, and layout files. The ms-appx-web scheme

references these same files, but in the web compartment.

not C: The element stores custom application configuration information such as database connection strings, file paths, XML Web service URLs, or any information stored in an application\\'s .ini file.

QUESTION 4

You need to access the remote image data according to the requirements. Which data storage methods should you use?

A. SaveDataToSqlAzureStorage() and GetDataFromSqlAzureStorage()

B. SaveDataToRemoteStorage() and GetDataFromRemoteStorage()

C. SaveDataToAzureStorage() and GetDataFromAzureStorage()

D. SaveDataToWebService() and GetDataFromWebService()

Correct Answer: D

QUESTION 5

You are developing a page for a Windows Store app.

You have the following requirements for the page:

Display a button on the bottom app bar that allows the user to insert a picture. This button must be bound to the Insert command in the view model.

Display a button in the main content area of the page that allows the user to open documents. This button must be bound to the Open command in the view model. You need to ensure that the requirements are met. How should you complete the relevant code? (To answer, drag the appropriate code segments to the correct locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Select and Place:

Correct Answer:

```
<Button Content="Insert picture"
  Command="ApplicationCommands.Insert"/>

<Button Content="Open document"
  Command="ApplicationCommands.Open"/>

<Button Content="Open document"
  Command="ApplicationCommands.Load"/>

<ButtonContent="Insert picture"
  Command="{BindingAdd}"/>
```

Answer Area

```
<ButtonContent="Open document"
  Command="{BindingOpen}"/>
<Page.BottomAppBar>
    <AppBar>
        <StackPanel Orientation="Horizontal">
            <Button Content="Insert picture"
              Command="{Binding Insert}"/>
        </StackPanel>
    </AppBar>
</Page.BottomAppBar>
```
