QUESTION 1

HOTSPOT

You develop an autohosted app for SharePoint.

The app will access SharePoint data in the host web.

You need to configure the minimum required data access permissions for the app.

How should you configure permissions in the app manifest? (To answer, select the appropriate option from each drop-down list in the answer area.)

Hot Area:

Scope	Permissions
<input type="text"/>	<input type="text"/>
Business Connectivity Services (BCS)	FullControl
Search	Manage
Web	Read
Workflow	Write

Correct Answer:

Scope	Permissions
<input type="text"/>	<input type="text"/>
Business Connectivity Services (BCS)	FullControl
Search	Manage
Web	Read
Workflow	Write

* SharePoint supports four different permission scopes within the content database and tenancy:

/ website

The website where the app is installed. Includes all children of this scope.

/ tenancy

/ site collection

/ list

* Minimal permission would be read.

Note: For each scope, an app can have the following rights: Read, Write, Manage, FullControl

Reference: App permissions in SharePoint 2013

QUESTION 2

Adventure Works uses SharePoint to store product and order information.

Product managers visit the Products list to see the status of each product. They request a feature that will allow them to easily see the recent and old product orders without opening the Products list. The products orders page is located at /sitepages/productorders.aspx, and the product order history page is located at /sitespages/productordershistory.aspx. Both pages require a query string parameter named ProductID.

You need to add custom actions to the Products list by using the least amount of administrative effort.

What should you do?

- A. Add an empty element to the SharePoint project. Add a tag, set the Location element to EditControlBlock, and then use the tag for a redirect to the custom page.
- B. Create a Windows Application and add a reference to Microsoft.SharePoint.Portal.CustomActions.dll and use the SPCustomActions class to add a custom action.
- C. Open the site in SharePoint Designer. Create a custom List Item Display Template and then apply it to the Products List View Web Part.
- D. Create a visual Web Part. Use a grid view with a template column and hyperlink, and databind the Products list. Add the Web Part to the allItems.aspx page of the Products list.

Correct Answer: C

1.

To add a menu item custom action feature to the app for SharePoint project Right-click the app for SharePoint project, and add a new Menu Item Custom Action item.

2.

Select the host web to expose the custom action and choose a list template and custom list as custom action scope to then click on Next button.

3.

Enter the menu item text you want to show and page in App where you want to redirect when the user selects the Menu item then click on the Finish button. Example:

Create Custom Action for Menu Item

Specify the properties to create custom action for menu item © sharepoint-journey.com

Where do you want to expose the custom action?

Host Web
 App Web

Where is the custom action scoped to?

List Template

Which particular item is the custom action scoped to?

Custom List

< Previous Next > Finish Cancel

Note: When you are creating an app for SharePoint, custom actions let you interact with the lists and the ribbon in the host web. A custom action deploys to the host web when end users install your app. Custom actions can open a remote webpage and pass information through the query string. There are two types of custom actions available for apps: Ribbon and Menu Item custom actions.

Reference: Custom actions in SharePoint 2013

QUESTION 3

DRAG DROP

You need to ensure that the features required for the Litware Team Site web template are referenced correctly in the ONET.XML file.

How should you complete the relevant code? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Select and Place:

The screenshot shows the SharePoint configuration tool interface. On the left, there are several feature ID fields: WebFeatures, FarmFeatures, SiteCollectionFeatures, DBF805AB-03D9-43DC-9154-52D6AC54689F, and FDE5D850-671E-4143-950A-87B473922DC7. On the right, the 'Answer Area' displays XML code for a configuration. The code is as follows:

```
<Configuration ID="0" Name="Default"
MasterUrl="_catalogs/masterpage/seattle.master">
<SiteFeatures>
<Feature ID="" />
</SiteFeatures>
< />
<Feature ID="" />
< />
</Configuration>
```

Correct Answer:

The screenshot shows the same SharePoint configuration tool interface. The 'Answer Area' now displays the correct XML code:

```
<Configuration ID="0" Name="Default"
MasterUrl="_catalogs/masterpage/seattle.master">
<SiteFeatures>
<Feature ID="FDE5D850-671E-4143-950A-87B473922DC7" />
</SiteFeatures>
< WebFeatures />
<Feature ID="DBF805AB-03D9-43DC-9154-52D6AC54689F" />
< / WebFeatures />
</Configuration>
```

Scenario:

* A web template based on the Team Site definition must be created. A three-state workflow must be used to manage business processes. A customized default home page must be deployed by using a site feature.

* Feature IDs:

* Three-state workflow: FDE5D850-671E-4143-950A-87B473922DC7

* Litware Web Artifacts: DBF80SAB-03D9-43DC-9154-52D6AC54689F

QUESTION 4

HOTSPOT

A company's IT department implements a Help Desk Ticketing system that involves workflow development by using SharePoint Designer and InfoPath. The Help Desk Ticket workflow involves multiple steps and tasks that have serial

approvals of multiple users and groups with custom task email messages.

The Approver accidentally rejects a workflow step, and the workflow has stopped. The Approver then corrects the step. You need to continue the workflow to reflect the updated approval.

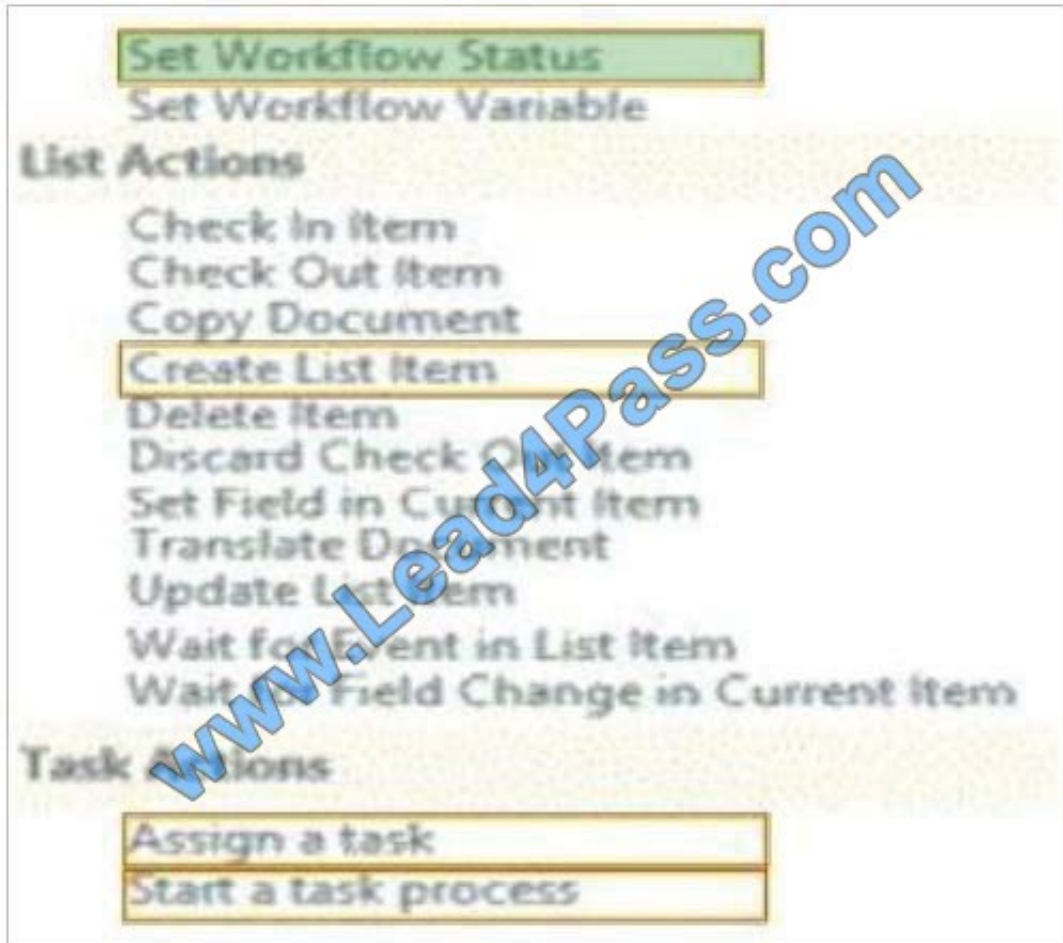

Which activity should you use? (To answer, select the appropriate action from the list of actions in the answer area.)

Hot Area:

The screenshot shows a list of actions in a workflow editor. The actions are grouped into three sections: 'Set Workflow Status', 'List Actions', and 'Task Actions'. The 'Create List Item' action is highlighted with a yellow box. A large blue watermark 'www.lead4pass.com' is overlaid diagonally across the list.

- Set Workflow Status
- Set Workflow Variable
- List Actions
 - Check In Item
 - Check Out Item
 - Copy Document
 - Create List Item**
 - Delete Item
 - Discard Check Out Item
 - Set Field in Current Item
 - Translate Document
 - Update List Item
 - Wait for Event in List Item
 - Wait for Field Change in Current Item
- Task Actions
 - Assign a task
 - Start a task process

Correct Answer:

* Set Workflow Status

There is an action to Set Workflow Status under Core Actions, in both SharePoint 2013 Workflow platform and SharePoint 2010 Workflow platform.

Reference: How to set Approval Status to approve\reject after approve\reject the request in SharePoint Online 2013 Designer Workflow?

QUESTION 5

You need to configure navigation for the site.

What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Create simple links or headers for new pages.
- B. Create friendly URLs for new pages automatically.
- C. Add unique identifiers to new pages.
- D. Create term-driven pages with friendly URLs.
- E. Add new pages to navigation automatically.

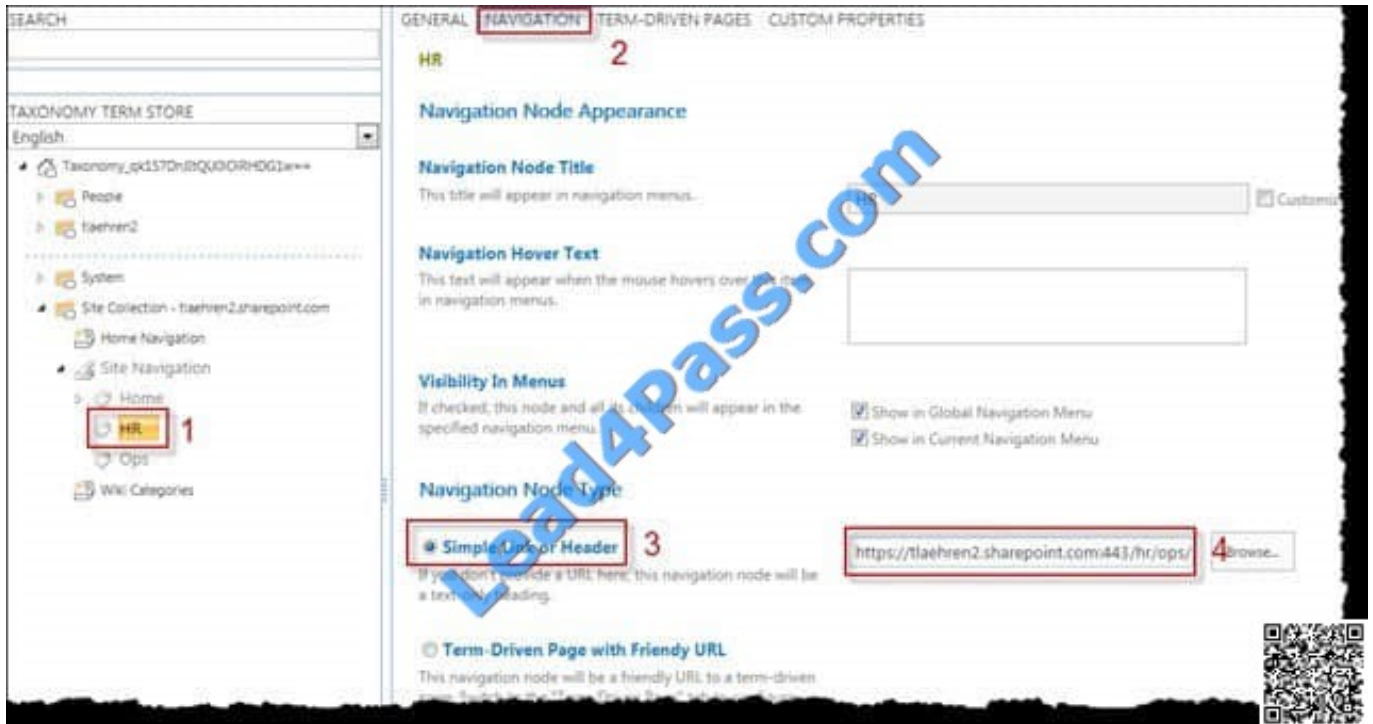

Correct Answer: ABD

D: Scenario: Navigational links across the top should be driven by the term store and use URLs that will improve search engine ranking.

A: Simple links:

The HR node is configured with a link to a page the user will be taken to when clicking on the menu item:

BD: Enable Managed Navigation

This page allows you to select managed navigation for your global and current navigation.

Under Site Settings / Look and Feel click on Navigation.

Global Navigation

Specify the navigation items to display in global navigation for this Web site. This navigation is shown at the top of the page in most Web sites.

- Display the same navigation items as the parent site (This is the top-level site.)
- Managed Navigation: The navigation items will be represented using a Managed Metadata term set.
- Structural Navigation: Display the navigation items below the current site

Current Navigation

Specify the navigation items to display in current navigation for this Web site. This navigation is shown on the side of the page in most Web sites.

- Display the same navigation items as the parent site (This is the top-level site.)
- Managed Navigation: The navigation items will be represented using a Managed Metadata term set.
- Structural Navigation: Display the current site, the navigation items below the current site, and the current site's siblings
- Structural Navigation: Display only the navigation items below the current site

Other settings on this page allow you to define the term set that will be used for navigation terms and if new pages created should be added to the term set automatically. You can also specify if friendly URL's should be created automatically.

Reference: Term based navigation in SharePoint 2013;SharePoint 2013 Friendly URLs and Managed Navigation
