### QUESTION 1

You are developing a WCF service.

The WCF service requires implementations of the new data contracts to validate against the old schema.

You need to develop a new data contract without breaking current functionality.

What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between

panes or scroll to view content.)

Select and Place:

The screenshot shows a development interface with a list of code segments on the left and an answer area on the right. The segments are:

- [DataContract(Validate = "Profile")]
- [DataContract(Identifier = "Profile")]
- [DataContract(Name = "Profile")]
- [DataContract(TypeID = "Profile")]
- [DataContract(ID = "Profile")]

The answer area contains the following code:

```
public class ProfileV1
{
    [DataMember]
    public string Username;
}

public class ProfileV2
{
    [DataMember]
    public string Username;

    [DataMember]
    public string Email;
}
```

Correct Answer:

	Answer Area
<code>[DataContract(Validate = "Profile")]</code>	<code>[DataContract(Name = "Profile")]</code>
<code>[DataContract(Identifier = "Profile")]</code>	
<code>[DataContract(Name = "Profile")]</code>	<code>public class ProfileV1</code> <code>{</code> <code>    [DataMember]</code> <code>    public string Username;</code> <code>}</code>
<code>[DataContract(TypeID = "Profile")]</code>	
<code>[DataContract(ID = "Profile")]</code>	<code>[DataContract(Name = "Profile")]</code>  <code>public class ProfileV2</code> <code>{</code> <code>    [DataMember]</code> <code>    public string Username;</code>  <code>    [DataMember]</code> <code>    public string Email;</code> <code>}</code>

**QUESTION 2**

You need to implement the requirements for handling IIS errors. What should you do?

A. Update the **customErrors** attribute in the app.config file as follows.

```
<customErrors mode="On" defaultRedirect="CustomErrorView" >  
  <error statusCode="401" redirect="Error/Error401" />  
</customErrors>
```

B. Update the **customErrors** attribute in the web.config file as follows.

```
<customErrors mode="On" defaultRedirect="CustomErrorView" >  
  <error statusCode="404" redirect="Error/Error404" />  
</customErrors>
```

C. Update the **customErrors** attribute in the app.config file as follows.

```
<customErrors mode="Off" defaultRedirect="CustomErrorView" >  
  <error statusCode="404" redirect="Error/Error404" />  
</customErrors>
```

D. Update the **customErrors** attribute in the web.config file as follows.

```
<customErrors mode="On" defaultRedirect="CustomErrorView" >  
  <error statusCode="403" redirect="Error/Error403" />  
</customErrors>
```

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: B

### QUESTION 3

You are developing a library to support multiple ASP.NET MVC web applications on a shared server. The library

provides implementations of security algorithms. If a problem with any of the security algorithms is discovered, a new version of

the library must be created and deployed. Application downtime during the update must be minimized.

You need to ensure that the new version of the library will be used by all applications as soon as possible.

What should you do?

- A. Build the web applications and include the security assembly as an embedded resource. When an update is needed, copy the new assembly to the bin directory for the application.
- B. Sign all assemblies in each application with the same key used to sign the security assembly. When an update is needed, create a new key pair and re-sign all assemblies.
- C. Build the security assembly as a netmodule in a shared location. Use the assembly linker to merge the netmodule into the assemblies for the application. When an update is needed, update the netmodule in the shared location.
- D. Install the security assembly in the Global Assembly Cache (GAC). When an update is needed, update the assembly in the GAC.

Correct Answer: D

---

#### QUESTION 4

You need to maximize performance of video delivery.

Which code segment should you use as the body of the GetVideoStream function in the videoController class?

- A. 

```
if (Request.Headers["Accept-Encoding"].Contains("gzip"))  
{  
    return new GZipStream(System.IO.File.OpenRead(videoId), CompressionMode.Compress);  
}  
return System.IO.File.OpenRead(videoId);
```
- B. 

```
if (Request.ContentEncoding.BodyName == "application/x-gzip")  
{  
    return new GZipStream(System.IO.File.OpenRead(videoId), CompressionMode.Compress);  
}  
return System.IO.File.OpenRead(videoId);
```
- C. 

```
return new GZipStream(System.IO.File.OpenRead(videoId), CompressionMode.Compress);
```
- D. 

```
MemoryStream stream = new MemoryStream();  
  
new GZipStream(System.IO.File.OpenRead(videoId), CompressionMode.Compress).CopyTo  
(stream);  
  
return stream;
```

- A. Option A  
B. Option B  
C. Option C  
D. Option D

Correct Answer: A

## QUESTION 5

The transcode.exe utility activates its license online when it is installed. You need to ensure that the registration of the transcode utility is handled as specified in its license. Which method should you add to the TranscodeWorkerRole class?

- A. 

```
public override void OnStop()
{
    Process.Start("transcode.exe", "unregister").WaitForExit();
    base.OnStop();
}
```
- B. 

```
public override void OnStop()
{
    RoleEnvironment.Stopping += (sender, args) =>
    {
        Process.Start("transcode.exe", "unregister").WaitForExit();
        base.OnStop();
    };
}
```
- C. 

```
public override void OnStop()
{
    RoleEnvironment.Stopping += (sender, args) =>
    {
        var task = Process.Start("transcode.exe", "unregister");
        if (task.HasExited)
            base.OnStop();
    };
}
```
- D. 

```
public override void OnStop()
{
    Process.Start("transcode.exe", "unregister");
    base.OnStop();
}
```

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: A
