QUESTION 1

You are designing an MVC web application.

The view must be as simple as possible for designers who do not have a technical background.

You need to combine two existing models to meet the requirement. Which component of the MVC framework should you use?

A. View

B. View Model

C. Controller

D. Model

Correct Answer: B

QUESTION 2

You need to ensure that only valid parameters are passed to the EditLog action.

How should you build the route? (To answer, drag the appropriate code segments to the correct location or locations. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or

scroll to view content.)

Select and Place:

```
id = @"\d+"

url: "RunLog/EditLog/{id}",

action = "EditLog",

defaults: new

constraints: new
```

```
routes.MapRoute(
    name: "EditLog",

    {

        controller = "RunLog",

    },

    {

    }
);
```

Correct Answer:

```
routes.MapRoute(
    name: "EditLog",
    url: "RunLog/EditLog/{id}",

    defaults: new

    {
        controller = "RunLog",
        action = "EditLog",
    },
    constraints: new

    {
        id = @"\d+"
    }
);
```

QUESTION 3

You are developing an application.

The application must be deployed from Team Foundation Server after a successful build is completed. The Process tab of the Build Definition screen is shown in the exhibit. (Click the Exhibit button.)

Correct Answer:

QUESTION 4

You are developing a library to support multiple ASP.NET MVC web applications on a shared server. The library provides implementations of security algorithms.

If a problem with any of the security algorithms is discovered, a new version of the library must be created and deployed. Application downtime during the update must be minimized.

You need to ensure that the new version of the library will be used by all applications as soon as possible. What should you do?

A. Build the web applications and include the security assembly as an embedded resource. When an update is needed, copy the new assembly to the bin directory for the application.

B. Sign all assemblies in each application with the same key used to sign the security assembly. When an update is needed, create a new key pair and re-sign all assemblies.

C. Build the security assembly as a netmodule in a shared location. Use the assembly linker to merge the netmodule into the assemblies for the application. When an update is needed, update the netmodule in the shared location.

D. Install the security assembly in the Global Assembly Cache (GAC). When an update is needed, update the assembly in the GAC.

Correct Answer: D

QUESTION 5

You are developing an ASP.NET MVC application that displays a report. The report includes large images that are stored in a database. Members of the EntityClient namespace are used to access the database through the ADO.NET Entity

Framework data model.

You need to prevent memory exceptions while generating a report using the EntityDataRcader type.

Which CommandBehavior type should you use?

A. FastForwardReadOnly

B. SequentialAccess

C. SingleResult

D. SingleRow

Correct Answer: B

Explanation: SequentialAccess

Provides a way for the DataReader to handle rows that contain columns with large binary values. Rather than loading the entire row, SequentialAccess enables the DataReader to load data as a stream.
