QUESTION 1

You are running a manual test using Microsoft Test Manager (MTM). You have chosen to create an action recording.

You want to pause the test run and exit the test runner.

Before you exit the test runner, you need to mark the test case as being in progress.

Which action should you perform in the test runner?

A. Close

B. Return to Testing Center

C. Save

D. Save and Close

Correct Answer: B

I am running manual test using Test Runner. In here, I can pause the test and return to Testing Center. However, after I have done my work in Testing Center, how do I resume my test? A) There is discoverability issue around here and many folks have stumbled on this. You can use the button highlighted below to go back to Test Runner.

QUESTION 2

You are using Microsoft Test Manager (MTM).

A test case is already in production.

You need to modify the test case to indicate it is being reworked.

2021 Latest lead4pass 70-497 PDF and VCE dumps Download

What should you do?

A. Change the test case state to Design.

B. Change the test case to Blocked.

C. Change the test case state to Closed.

D. Change the test plan state to Inactive.

Correct Answer: A

No test cases are ready to be run.

When all test cases remain in a design state for a long time, some issue is blocking progress. You might want to investigate the cause of the blockage.

Note: Update the state of each test case as it progresses from Design to Ready to Closed.

QUESTION 3

You are using Microsoft Test Manager (MTM).

You plan to reduce the maintenance of test suites.

You need to create test suites for which the test cases are automatically added.

What are two possible types of test suites that achieve this goal? (Each correct answer presents a complete solution. Choose two.)

A. Exploratory-based

B. Static

C. Query-based

D. Requirements-based

Correct Answer: CD

C: Query-based suites show the results of a query that you define. For example, you could select all the test cases that have Priority = 1.

D: Requirements-based suites are derived from Product Backlog Items, User Stories, or other requirements. The suite contains all the test cases that are linked to its requirement. This type helps you track how well each requirement has been tested.

QUESTION 4

You are using Microsoft Test Manager (MTM).

You have test cases that use a shared steps work item. You plan to replace the shared steps work item with a new implementation.

You need to find the test cases that are using that shared steps work item.

What are two possible features you could use to achieve this goal? (Choose two. Each answer choice provides a complete solution.)

A. A Direct Links query

B. Shared Steps Manager

C. The TCM.exe utility

D. The WitAdmin.exe utility

Correct Answer: AB

A: Link Type: Predecessor-Successor (Dependency topology)

*

 Track tasks that must be completed before others can be started. When you plan work using Project, linked tasks are represented as predecessor-successor links in TFS.

*

 Support one-to-many relationships.

*

 Find and view predecessor work items and their successor work items in a two-tiered, direct links query view.

B: Q: Can I find all my shared steps, and all the test cases where they are used?

A: Yes. Open Microsoft Test Manager and look under Organize, Shared Steps Manager.

Incorrect:

not C: the TCM.exe command-line application. This command-line isn\'t intended to be an alternative for everything you can do in Microsoft Test Manager (MTM) but rather to fill some gaps and enable some of the less common scenarios that

still may be important for some testers.

Not D: You can change how you track your team\'s progress by creating and customizing objects that track work items. By using the witadmin command-line tool, you can create, delete, import, and export objects such as categories, global lists, global workflow, types of links, and types of work items. You can also permanently delete types of work item types, and you can delete, list, or change the attributes of fields in work item.

QUESTION 5

Your company uses Lab Center during manual- and automated-testing processes for different types of testing environments.

Development operations is standardizing their processes. They want to document their best practices for environment setup.

You need to verify your setup of a standard environment, which consists of physical servers that match your production environment. However, you are unable to connect to your new lab environment.

Which action in Lab Center should you perform in order to troubleshoot the problem?

A. Repair

B. Manage

C. Connect

D. open

Correct Answer: A

Q: The status of my lab environment is Not Ready. What should I do?

A: On the context menu of the environment, choose Repair. The repair will take a few minutes. This status means that the test agent is not installed and correctly configured on one of the machines in the environment. The repair operation logs into the machines and installs and configures the agent.

Incorrect:

Not C: It is stated that the problem is that we are unable to connect. Choosing to connect again would not help.

Reference: Standard lab environments
