## QUESTION 1

You use Microsoft Visual Studio 2010 and Microsoft .NET Framework 4 to create a Windows Presentation Foundation (WPF) application.

You create a WPF window in the application.

You add the following code segment to the application.

```
public class ViewModel
{
    public ICollection<Data> Data { get; set; }
}

public class BusinessObject
{
    public string Name { get; set; }
}
```

The DataContext property of the window is set to an instance of the ViewModel class. The Data property of the ViewModel instance is initialized with a collection of BusinessObject objects.

You add a TextBox control to the Window.

You need to bind the Text property of the TextBox control to the Name property of the current item of the CollectionView of the DataContext object. You also need to ensure that when a binding error occurs, the Text property of the TextBox control is set to N/A.

Which binding expression should you use?

- A. {Binding Path=Data/Name, FallbackValue=\\N/A\\}
- B. {Binding Path=Data.Name, FallbackValue=\\N/A\\}
- C. {Binding Path=Data/Name, TargetNullValue=\\N/A\\}
- D. {Binding Path=Data.Name, TargetNuliValue= \\N/A\\}

Correct Answer: A

## QUESTION 2

You are developing a Windows Presentation Foundation (WPF) application that contains a custom Button control.

The custom Button control can be set as active by setting an IsActive property to true. You need to ensure that the IsActive property can be bound to a business object.

What should you do on the custom Button control?

- A. Implement IsActive as a Microsoft .NET property.

- B. Implement IsActive as a Dependency property.
- C. Implement INotifyPropertyChanged
- D. Implement IQueryable.

Correct Answer: B

---

### QUESTION 3

You use Microsoft .NET Framework 4 to create a custom Windows Presentation Foundation (WPF) application.

Your environment includes several WPF applications. The applications use the same logo and style configuration as part of a corporate standard.

You need to ensure that the existing applications can be updated to use the same logo and style settings without recompiling.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Mark the resource as an embedded resource in each application.
- B. Create a resource in an XAML file that contains the logo and style configurations.
- C. Create a resource in a custom control that contains the logo and style configurations.
- D. Add the resource as a ResourceDictionary in the MergedDictionaries collection of each application.
- E. Use ResourceManager to read the content of the resource. Manually assign the style configurations included in the resource file to the appropriate control in each application.

Correct Answer: BD

---

### QUESTION 4

You plan to create a Windows Presentation Foundation (WPF) user control.

You need to create a WPF user control that contains 12 areas that are identical in size. The solution must meet the following requirements:

Ensure that if the control is resized, the relative size of the areas will remain the same.

Minimize development effort. Which control should you use?

- A.  
StackPanel
- B.  
DockPanel

C.

Viewbox

D.

UniformGrid

E.

WrapPanel

Correct Answer: D

---

### QUESTION 5

You are developing a Windows Presentation Foundation (WPF) application.

You are implementing the security features for a function that requires File IO. The callers of this function that are higher in the stack do not have permission to read the C:\temp directory. The function also accesses other resources that require permission.

You need to ensure that the function has the proper permissions to read the C:\temp directory, and that all other resources in the function can still be accessed.

Which attribute should you include with the function?

A.

B.

C.

D.

Correct Answer: B
