QUESTION 1

You are a tasked with performing a code review. The business rule is the following:

If INSERTs into the first table succeed, then INSERT into the second table. However, if the INSERTs into the second table fail, roll back the inserts in the second table but do not roll back the inserts in the first table.

Although this can also be done by way of regular transactions, It needs to be performed using TransactionScope objects.

Which code would fit this business rule?

- A. `try{using (TransactionScope scope1 = new TransactionScope(TransactionScopeOption) {...try{.....using (TransactionScope scope2 = new TransactionScope (TransactionScopeOption)) { }}}`
- B. `try{using (TransactionScope scope1 = new TransactionScope(TransactionScopeOption.Required)) {...using (TransactionScope scope2 = new TransactionScope(TransactionScopeOption.RequiresNew)){ }.....}}`
- C. `try{using (TransactionScope scope1 = new TransactionScope(TransactionScopeOption.Required)) {...}using (TransactionScope scope2 = new TransactionScope(TransactionScopeOption.RequiresNew)) {...}}`
- D. `try{using (TransactionScope scope1 = new TransactionScope(TransactionScopeOption.Required)) {...try{.....using (TransactionScope scope2 = new TransactionScope(TransactionScopeOption.RequiresNew)){ }}}`

Correct Answer: D

Required A transaction is required by the scope. It uses an ambient transaction if one already exists. Otherwise, it creates a new transaction before entering the scope. This is the default value. RequiresNew A new transaction is always

created for the scope. Suppress The ambient transaction context is suppressed when creating the scope. All operations within the scope are done without an ambient transaction context.

Transaction Scope (EXAMPLE 3)

(<http://msdn.microsoft.com/en-us/library/bb896149%28SQL.100%29.aspx>) TransactionScopeOption Enumeration
(<http://msdn.microsoft.com/en-us/library/system.transactions.transactionscopeoption.aspx>)

QUESTION 2

The Entity Data Model file (.edmx file) must be updated to support inheritance mapping for Products and Components.

You need to add the following code to the \Model\Model.edmx file: The code in line EX243 that maps the Product type
The code in line EX250 that maps the Component type

What should you do?

- A. Insert the following code at line EX243:Insert the following code at line at EX250:
- B. Insert the following code at line EX243:Insert the following code at line at EX250:
- C. Insert the following code at line EX243: Insert the following code at line EX250:

D. Insert the following code at line EX243:Insert the following code at line at EX250:

Correct Answer: D

QUESTION 3

You use Microsoft Visual Studio 2010 and Microsoft .NET Framework 4 to create an application. The application uses the ADO.NET Entity Framework to model entities. The application allows users to make changes to entities while disconnected from the central data store.

You need to ensure that when the user connects to the central data store and retrieves new data, the application meets the following requirements:

Changes made to the local data store in disconnected mode are preserved.

Entities that have already been loaded into the local data store, but have not been modified by the user, are updated with the latest data.

What should you do?

- A. Call the query's Execute method by using the MergeOptions.AppendOnly option.
- B. Call the query's Execute method by using the MergeOptions.OverwriteChanges option.
- C. Call the Refresh method ofObjectContext by using the RefreshMode.StoreWins option.
- D. Call the Refresh method ofObjectContext by using the RefreshMode.ClientWins method.

Correct Answer: D

QUESTION 4

A performance issue exists in the application. The following code segment is causing a performance bottleneck:

```
Dim colors = context.Parts.GetColors()
```

You need to improve application performance by reducing the number of database calls.

Which code segment should you use?

- A. `Dim colors = context.Parts.OfType(Of Product).Include("Product.Color").GetColors()`
- B. `Dim colors = context.Parts.OfType(Of Product).Include("Colors").GetColors()`
- C. `Dim colors = context.Parts.OfType(Of Product).Include("Parts.Color").GetColors()`
- D. `Dim colors = context.Parts.OfType(Of Product).Include("Color").GetColors()`

Correct Answer: D

QUESTION 5

You use Microsoft Visual Studio 2010 and Microsoft .NET Framework 4 to develop an application. You use the Entity Framework Designer to create an Entity Data Model (EDM). You need to create a database creation script for the EDM.

What should you do?

- A. Use a new Self-Tracking Entities template.
- B. Drag entities to Server Explorer.
- C. Run the Generate Database command.
- D. Select Run Custom Tool from the solution menu.

Correct Answer: C

You can generate the database from the conceptual model: Right-click the Entity Framework designer surface and then choose Generate Database From Model.

The script has been created and saved to a file, but it has not been executed.
