### QUESTION 1

You are designing a Windows Presentation Foundation (WPF) application by using Microsoft .NET Framework 4 and Microsoft SQL Server 2008.

The application runs successfully on a local client computer by using your user account. You deploy the database of the application to the production server.

You configure the application connection string to use the Windows Authentication mode.

You deploy the application to several client computers that use other applications on the network. The client computers access different databases on the production server by using the Windows Authentication mode.

Users report that the application is not working and that they receive a database connection exception.

You need to identify the source of the problem.

What is the source of the problem?

- A. The database is currently blocked due to locks.
- B. The users do not have the correct database permissions.
- C. The users do not have valid SQL Server 2008 database logins.
- D. The client computers are not configured to use the network.

Correct Answer: B

---

### QUESTION 2

You are designing a Windows client application by using Microsoft .NET Framework 4 and Microsoft Visual Studio 2010. The business logic layer of the application is implemented by using Windows Communication Foundation (WCF).

You write the following code segment in the middle tier: -

```
Public Interface IWcf Service
```

```
- -Sub ProcessData(ByVal d As Data)
```

```
End Interface
```

The Process Data service method is a long-running operation.

You need to ensure that the application meets the following requirements:

"Users can continue to use the user interface while the Process Data service method is running.

"Message delivery is reliable.

What should you use?

- A. A Session full One-Way operation on Process Data with a proxy-based synchronous class invocation

- B. A Session full Request-Reply operation on Process Data with a proxy-based asynchronous invocation
- C. A Session less One-Way operation of Process Data with a proxy-based synchronous class invocation
- D. A Session less Request-Reply operation on Process Data with a proxy-based asynchronous invocation

Correct Answer: C

---

### QUESTION 3

You are designing a Windows application by using Microsoft .NET Framework 4 and Microsoft Visual Studio 2010.

You need to use a replacement culture for the application at runtime. You also need to ensure that the information in the custom culture will tie available to the application.

Which two tasks should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Restart the process that is displaying the user interface,
- B. Register the replacement culture by using the CultureAndRegionInfoBuilder class.
- C. Register the replacement culture by using the CultureInfo class.
- D. Call the Save method of the CultureAndRegionInfoBuilder class instance.

Correct Answer: AB

---

### QUESTION 4

You are designing an application by using Windows Presentation Foundation (WPF), Microsoft .NET Framework 4, and Microsoft SQL Server 2008.

The application will contain several forms that include custom data validators.

You need to ensure that data is validated before the database updates occur. You also need to ensure that the validation logic can be reused.

How should you design the validation?

- A. Implement the IDataErrorInfo interface in the data class of the application.
- B. Implement the INotifyPropertyChanged interface in the data class of the application.
- C. ?Subscribe to the MouseLeave event for all user interface (UI) components of the application. ?Perform data validation in the event handler and alert users when a data entry error occurs.
- D. ?Subscribe to the TextChanged event for all user interface (UI) components of the application. ?Perform data validation in the event handler and alert users when a data entry error occurs.

Correct Answer: A

---

### QUESTION 5

You are developing a Windows Presentation Foundation (WPF) application by using Microsoft .NET Framework 4.

You need to recommend a testing strategy to identify the additional hardware resources that are necessary to support future projected growth.

Which testing strategy should you recommend?

- A. Load testing
- B. Stress testing
- C. Capacity testing
- D. Integration testing

Correct Answer: C
