QUESTION 1

You are designing an application by using Windows Presentation Foundation (WPF) and Microsoft .NET Framework 4.

The application consists of multiple data entry screens.

You need to ensure that users can return to previous screens. You also need to ensure that users can view a history of screens,

What should you do?

- A. Create buttons to allow a user to open a new window for the data entry screens.
- B. Create buttons to allow a user to open a new Window as an MDI child window for the data entry screens.
- C. Create hyperlinks to allow a user to move between data entry screens. Use the `NavigationService` class to manage navigation history.
- D. Create hyperlinks to allow a user to move between data entry screens. Use the `NavigationProgressEventArgs` class to manage navigation history.

Correct Answer: C

QUESTION 2

You are designing a Windows application by using Microsoft .NET Framework 4 and Microsoft Visual Studio 2010.

You plan to add a feature to the application. The application will be used in several different locales. The application will send data to a centralized server and log the date and time information.

You need to ensure that the date and time information includes the local Universal Time Coordinate (UTC) offset value. Which class should you use?

- A. `CultureInfo`
- B. `DateTimeOffset`
- C. `CultureInfoConverter`
- D. `DateTimeOffsetConverter`

Correct Answer: B

QUESTION 3

You are designing a Windows Presentation Foundation (WPF) client application from which employees will access a Web service.

Business partners will access the Web service by using proprietary client applications.

You need to recommend a solution for ensuring the integrity of data in the system.

What should you recommend?

- A. Secure the Web service by using SSL.
- B. Implement data validation at the service layer and reject invalid data.
- C. Implement data validation on the client and reject invalid data.
- D. Encrypt data while storing it in the database.

Correct Answer: B

QUESTION 4

You have developed a Windows application by using Microsoft .NET Framework 4, Windows Presentation Foundation (WPF), and Microsoft SQL Server 2008.

The application is deployed as an XAML Browser Application (XBAP) and executes in the Internet Zone in Internet Explorer. The application updates data in a SQL Server 2008 database. Users report that a SecurityException exception occurs when the application attempts to save data to the database.

You need to design a solution to resolve the problem. What should you do?

- A. Redesign the XBAP application by using partial trust.
- B. Redesign the XBAP code to utilize stored procedures.
- C. Design a WCF Service tier to provide database access.
- D. Design a data access layer that uses ASP.NET Entity Framework to communicate with the database by using the System.Data.SqlClient class.

Correct Answer: C

QUESTION 5

You are working with an existing Windows Presentation Foundation (WPF) application in Microsoft Visual Studio 2010. The WPF application requires approximately one minute to initialize before displaying its main window.

You have the following requirements:

Immediately display a splash screen when the WPF application launches.

Allow for the display of an initialization progress bar on the splash screen.

Close the splash screen when the WPF application is ready to display the main window.

You need to recommend an approach for meeting the requirements.

What should you recommend?

- A. Move the initialization code to the code-behind of the main window.

B. Launch a custom splash screen by using a Window object. When the initialization completes, launch the main window from the splash screen.

C. Create a SplashScreen object. Display the object in the code-behind of the App.xaml file.

D. Compile an image into the WPF application with a Build Action value of SplashScreen.

Correct Answer: B
