QUESTION 1

You need to design an exception-handling strategy for the Web application. Which approach should you recommend?

- A. Add a customErrors section in the configuration file, with mode="On" and default Redirect="/error.aspx".
- B. Add a customErrors section in the configuration file, with mode="RemoteOnly" and defaultRedirect=\\'/error.aspx".
- C. Catch all unhandled exceptions in the Page_Error event of each page, send an e-mail message containing the exception details, clear all errors, and redirect the user to a generic error page.
- D. Catch all unhandled exceptions in the Application_Error event of the Global.asax file, send an e-mail message containing the exception details, clear all errors, and redirect the user to a generic error page.

Correct Answer: D

QUESTION 2

You are designing an ASP.NET Web application that will be deployed both to a server that runs IIS 6 and to a server that runs IIS 7.0.

The Web application must meet the following requirements:

Log all unhandled exceptions.

Write exception details to a custom error log.

When an exception occurs, write the user credentials to a custom error log.

You need to recommend an approach for handling errors. What should you recommend?

- A. Create an error handler for the Application_Error event.
- B. In the customErrors element of the Web.config file, set the mode attribute to on.
- C. In the customErrors element of the Web.config file, set the defaultRedirect attribute to errors.htm.
- D. Create an error handler for the HttpApplication.LogRequest event.

Correct Answer: A

QUESTION 3

You need to design the application to support the RSS news feature. Which approach should you recommend?

- A. Use the FileResult class and return the result as a plain text file.

- B. Use the ViewResult class and bind the items to an HTML.TextArea HTML Helper.
- C. Use a custom ActionResult class and return the output stream as the return value.
- D. Use a custom ActionResult class and bind the items to an HTML.TextArea HTML Helper.

Correct Answer: C

QUESTION 4

You are designing a testing methodology for an ASP.NET MVC 2 Web application. You have the following application testing requirements:

Verify that security issues are identified as early within the request as possible.

Verify that the effectiveness of input corruption is minimized.

You need to meet the application testing requirements.

Which methodology should you recommend?

- A.
Design tests against the model.
- B.
Design tests against the controllers.
- C.
Design tests against the client browser.
- D.
Design tests against the data access layer.

Correct Answer: B

QUESTION 5

You are designing an ASP.NET Web application for display on desktop computers and on mobile devices. You have the following requirements:

Present a full-featured interface to users of desktop computers that include many interaction options and graphical buttons.

Present a simple interface to users of mobile devices that do not include bandwidth-intensive elements.

You need to design the Web application to meet the requirements. Which two approaches should you recommend?
(Each correct answer presents part of the solution? Choose two.)

A.

Create two separate skins for desktop and mobile user interfaces

B.

Create two separate themes for desktop and mobile user interfaces

C.

In the PreRender method of the Web application's master page, test Request.Browser.MobileDeviceModel and switch to the appropriate interface.

D.

Create a System.Web.UI.Page subclass that all Web application pages inherit from. In the Page_PreInit method, test Request.Browser.IsMobileDevice and switch to the appropriate interface

Correct Answer: BD
