QUESTION 1

You are designing an ASP.NET Web application for online image editing.

Users can upload images to the Web application and edit those images by using utilities provided by the application. Some utilities are processor intensive and should be offloaded to a Graphics Processing Unit (GPU). Other utilities require

the use of proprietary algorithms that must be performed on the server.

You need to design a solution for minimizing bandwidth usage and Web server response times during image processing, while providing a responsive application.

Which two approaches should you recommend? (Each correct answer presents part of the solution. Choose two.)

A. Perform server-side image processing on the Web server

B. Perform server-side image processing on a dedicated server.

C. Perform client-side image processing by using ASP.NET AJAX.

D. Perform client-side image processing by using Microsoft Silver light.

Correct Answer: BD

QUESTION 2

You are designing an ASP.NET Web application.

The Web application uses a Menu control to display either a menu of public and private pages to authorized users or a menu of only public pages to visitors.

You need to ensure that the menu options and URLs of the private pages are not available to unauthorized users.

Which approach should you recommend?

A. Use the Page_Init method to add to the Menu control only pages that the user is authorized to view

B. Use the Page_Load method to add to the Menu control only pages that the user is authorized to view

C. Use a JavaScript window.onload event handler to hide the private pages from the list of pages shown on the menu

D. Use a JavaScript document ready event handler to hide the private pages from the list of pages shown on the menu

Correct Answer: B

QUESTION 3

You are designing an ASP.NET Web application.

You need to ensure that users can display the content of the application in a language that they select.

Which two approaches should you recommend? (Each correct answer presents part of the solution. Choose two.)

A. Use language-specific master pages.

B. Use CurrentUICulture.

C. Use CurrentCulture.

D. Use language-specific resource files.

Correct Answer: BD

QUESTION 4

You have an ASP.NET Web application that displays charts that are generated daily from data in a Microsoft SQL Server database.

Each chart is implemented as a user control that displays data retrieved from the database. Data retrieval and chart generation consume a significant amount of resources.

Users of the Web application generate unique reports that contain one or more chart controls.

Each chart is common to many reports.

You need design a solution to improve the performance of the Web server.

Which approach should you recommend?

A. Use page caching.

B. Use fragment caching.

C. Use the application cache.

D. Use SQL cache dependency.

Correct Answer: B

QUESTION 5

You are troubleshooting an ASP.NET web application. The application contains a setting that is included in several configuration files. You need to identify the configuration file in which the setting was first applied. In which order should you evaluate the configuration files? (To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

Answer Area

Machine.config

Root web.config

Application subdirectory web.config

Application root web.config

Correct Answer:

Answer Area

Machine.config

Root web.config

Application root web.config

Application subdirectory web.config
