### QUESTION 1

You are designing an ASP.NET Web application that targets multiple browsers and form factors. Some devices do not support the markup produced by a third-party server control. You cannot modify the third-party server control.

You need to recommend an approach for providing the correct markup for the problematic devices.

What should you recommend?

- A. Derive a class from ControlAdapter that produces device-specific markup. In the browser definition file, add an entry in the controlAdapters collection for each of the problematic devices. In the entry, point to the third-party server control and adapter type.
- B. Create an ASP.NET theme specific to each problematic device. In the page PreRender event, set the Theme property to the custom theme based on the value of the Request.Browser.Type property.
- C. In the page PreRender event, call the Response.WriteSubstitution() method with a delegate. In the delegate, populate the page with device-specific markup based on the value of the Request.Browser.Type property.
- D. Derive a class from the third-party server control. In the new server control, override the TemplateSourceDirectory property to return a value pointing to a file containing the device-specific markup.

Correct Answer: A

---

### QUESTION 2

You are designing an ASP.NET Web application. You have the following requirements:

Perform rapid development.

Maintain cross-browser compatibility.

Do not require client-side installations.

You need to recommend a client-side technology that meets the requirements.

Which two technologies could you recommend? (Each correct answer presents a complete solution. Choose two.)

A.

jQuery

B.

ASP.NET AJAX

C.

Microsoft Silverlight

D.

Microsoft Visual Basic Scripting Edition (VBScript)

Correct Answer: AB

---

### QUESTION 3

You have a Web application that has been migrated from ASP.NET 3.5 to ASP.NET 4. While testing the migrated Web application, developers notice that the non-input Web controls with the property Enabled="false" are rendering as enabled.

You need to ensure that the controls in the migrated Web application render correctly, and that other Web applications hosted on the same Web server are not affected by the solution.

Which approach should you recommend?

- A. Use the controls element of the pages section of the machine config file.
- B. Use the controls element of the pages section of the migrated application's web.config file.
- C. Use the control Rendering Compatibility Version element of the pages section of the machine config file.
- D. Use the control Rendering Compatibility Version element of the pages section of the migrated application's web.config file

Correct Answer: D

---

### QUESTION 4

You are designing an ASP.NET MVC 2 Web application that will contain reusable markup. The Web application must read data from the TempData dictionary.

You need to recommend a solution that allows the Web application to pass data between pages by using the TempData dictionary.

What should you recommend?

- A. Design a view user control and enable ViewState.
- B. Use a Substitution control and enable Session state.
- C. Design a view user control and enable Session state.
- D. Use a Substitution control and enable ViewState.

Correct Answer: C

---

### QUESTION 5

You have an ASP.NET Web Forms application for processing orders. Many users of the application submit their order forms multiple times due to incorrectly formatted credit card information.

You need to plan for validation of the length and format of data in the credit card field on the client side prior to processing each transaction. Which approach should you recommend?

- A. Use a CustomValidator control in the Page\_Load method.
- B. Use a CustomValidator control in the OnServerValidate method.
- C. Use a RequiredFieldValidator control and a Comparevalfdator control.
- D. Use a RequiredFieldValidator control and a RegularExpressionValidator control.

Correct Answer: D
