-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

You administer an Azure environment that includes six Azure Resource Manager (ARM) virtual machines (VMs) that support development. The development team uses Azure SQL databases and Azure Queues for application storage. All

Azure resources are grouped within a single subscription and resource group.

You need to reduce the recurring monthly Azure costs without degrading server performance. You must minimize the administrative effort involved.

What should you do?

- A. Remove the development team role from the resource group daily.
- B. Create an Azure Automation runbook that cycles the VMs daily.
- C. Update the development environment to use Azure Table storage.
- D. Create an Azure PowerShell script that updates the VM size to Standard_A0 daily.

Correct Answer: C

QUESTION 2

Which of the following virtualization characteristics allows the use of different types of physical types or physical servers?

- A. Security
- B. Hardware independence
- C. Scalability
- D. Variable costs

Correct Answer: B

Virtualization is a conversion process that translates unique IT hardware into emulated and standardized software-based copies. Through hardware independence, virtual servers can easily be moved to another virtualization host, automatically resolving multiple hardware- software incompatibility issues. As a result, cloning and manipulating virtual IT resources is much easier than duplicating physical hardware.

QUESTION 3

You need to debug the website remotely.

Which three actions should you take? Each correct answer presents part of the solution.

- A. In the Azure management portal, configure a monitoring endpoint.
- B. In the Azure management portal, set remote debugging to On and set the Visual Studio version to 2013.
- C. Install the Azure SDK for .NET on the computer that runs Visual Studio.
- D. In the web.config file for the website, set the debug attribute of the compilation element to true.
- E. In the Azure management portal, set the web hosting plan to Standard.

Correct Answer: BCD

QUESTION 4

You deploy a cloud service that reads and processes orders from a queue by using a worker role. The service includes a C# class named OrderProcessor.

Your organization is moving all Azure resources to use Azure Resource Manager (ARM) templates. You must migrate the code to Service Fabric. You establish a new Service Fabric cluster to deploy the updated code. You migrate all settings

from the ServiceConfiguration.cscfg file to a new Settings.xml file that each Service Fabric instance will use.

You need to update the code for the OrderProcessor class.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

Hot Area:

Answer area

```
namespace WideWorldImportersOrderProcessor
{
    public class OrderProcessor :
    {
        private CloudQueue ordersQueue;
        private CloudBlobContainer ordersBlobContainer;
        private DbContext ordersDatabaseContext;
        protected override
        {
            ConfigurationPackage configPackage = this.Context.
            GetConfigurationPackageObject ("Config");
            string databaseConnectionString = parameters["OrdersDatabaseConnection"]?.Value;
            ordersDatabaseContext = GetOrdersDatabaseContext(databaseConnectionString);
            ordersBlobContainer = GetOrdersBlobStorageContainerReference();
            ordersQueue = GetOrdersQueueReference();
            ProcessOrders();
        }
    }
}
```

Options for public class OrderProcessor :
StatelessService
FabricClient
ServicePartitionResolver

Options for GetConfigurationPackageObject ("Config");
Task RunAsync(CancellationToken token, CancellationToken cancel, ServiceInstance)

Options for parameters =
NodeContext
CodePackageActivationContext

Correct Answer:

Answer area

```

namespace WideworldImportersOrderProcessor
{
    public class OrderProcessor :
    {
        private CloudQueue ordersQueue;
        private CloudBlobContainer ordersBlobContainer;
        private DbContext ordersDatabaseContext;
        protected override
        {
            ConfigurationPackage configPackage = this.Context.
            GetConfigurationPackageObject ("Config");
            NodeContext
            CodePackageActivationContext
            configPackage.Settings["MyConfigSection"].Parameters;
            string databaseConnectionString = parameters["OrdersDatabaseConnection"]?.Value;
            ordersDatabaseContext = GetOrdersDatabaseContext(databaseConnectionString);
            ordersBlobContainer = GetOrdersBlobStorageContainerReference();
            ordersQueue = GetOrdersQueueReference();
            ProcessOrders();
        }
    }
}

```

Dropdown menu options: StatelessService, FabricClient, ServicePartitionResolver, Task Run/Async(CancelationToken cancel)/ServiceInstance, IEnumerable<ServiceInstance/Istener> CreateServiceInstance/Istener(), NodeContext, CodePackageActivationContext, Key, ConfigurationPackage, GetConfigurationPackageObject ("Config"), property> parameters = configPackage.Settings["MyConfigSection"].Parameters, string databaseConnectionString = parameters["OrdersDatabaseConnection"]?.Value, GetOrdersDatabaseContext(databaseConnectionString), GetOrdersBlobStorageContainerReference(), GetOrdersQueueReference(), ProcessOrders(), }

QUESTION 5

You need to ensure that operations are billed correctly. Which code should you insert at line AP097?

Code fragments

-
-
-
-
-
-
-
-

Answer area

```

[ ] = new [ ]
{
    [ ] = [ ]
}

```

Select and Place:

Code fragments

- ActorServiceSettings
- ActorGarbageCollectionSettings
- ReentrantNode
- ActorMethodContext
- ActorReentrantNode.Disabled
- ActorReentrantNode.LogicalCallContext
- ActorCallType.ActorInterfaceMethod
- ActorCallType.ReminderMethod

Answer area

```

[ ] = new [ ]
{
  [ ] = [ ]
}
  
```

Correct Answer:

Code fragments

- []
- []
- ReentrantNode
- ActorMethodContext
- []
- []
- ActorCallType.ActorInterfaceMethod
- ActorCallType.ReminderMethod

Answer area

```

[ ActorGarbageCollectionSettings ] = new [ ActorReentrantNode.Disabled ]
{
  [ ActorReentrantNode.LogicalCallContext ] [ ActorServiceSettings ]
}
  
```
