QUESTION 1

You are designing an Azure storage solution for a company. The company has the following storage requirements:

An app named App1 uses data analytics on stored data. App1 must store data on hierarchical file system that uses Azure Active Directory (Azure AD) access control lists.

An app named App2 must have access to object-based storage. The storage must support role-based access control and use shared access signature keys.

You need to design the storage solution.

Which storage solution should you use for each app? To answer, drag the appropriate storage solutions to the correct apps. Each storage solution may be used once, more than once, or not at all. You may need to drag the split bar between

panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Correct Answer:

QUESTION 2

You need to encrypt a media file.

Which type of encryption should you use?

A. secure token service

B. envelope

C. PlayReady

D. storage

Correct Answer: C

QUESTION 3

You are planning an upgrade strategy for an existing Azure application. Multiple instances of the application run in Azure. The management team is concerned about application downtime, due to a business service level agreement (SLA).

You are evaluating which change in your environment will require downtime. You need to identify the changes to the environment that will force downtime. Which change always requires downtime?

A. Adding an HTTPS endpoint to a web role

B. Upgrading the hosted service by deploying a new package

C. Changing the value of a configuration setting

D. Changing the virtual machine size

Correct Answer: A

If you change the number of endpoints for your service, for example by adding a HTTPS endpoint for your existing Web Role, it will require downtime. References: http://blog.toddysm.com/2010/06/re-deploying-your-windows-azure-service-without-incurring-downtime.html

QUESTION 4

You manage a large number of on-premises applications. You plan to migrate the applications to Azure.

You need to implement Azure Storage for each type of data that the applications use.

For each type of data, which storage mechanism should you use? To answer, drag the appropriate storage mechanism to the correct type of data. Each storage mechanism may be used once, more than once, or not at all. You may need to

drag the split bar between panes or scroll to view content.

Select and Place:

Storage option	Answer Area		
		Type of data	Storage option
Queue storage		Log files and other large datasets	Storage option
Blob storage		Flexible datasets, including user data for web applications	Storage option
Premium storage		Data associated with managing asynchronous tasks	Storage option
Table storage		Configuration files and diagnostic data including metrics and crash dumps	Storage option
File storage		Virtual machine disk files	Storage option

Correct Answer:

Storage option	Answer Area		
		Type of data	Storage option
Queue storage		Log files and other large datasets	Blob storage
Blob storage		Flexible datasets, including user data for web applications	Table storage
Premium storage		Data associated with managing asynchronous tasks	Queue storage
Table storage		Configuration files and diagnostic data including metrics and crash dumps	File storage
File storage		Virtual machine disk files	Blob storage

QUESTION 5

A company creates an Azure worker role to manage products. The number of customers who inquire about how many products are in inventory rapidly increases. You need to ensure that the worker role can scale to accommodate the

increased workload.

How should you complete the relevant code? To answer, select the appropriate option or options in the answer area.

Hot Area:

Answer Area

	scaler =
Scaler	
Autoscaler	
Metronome	
Configuration	

EnterpriseLibraryContainer.Current.GetInstance< [ ] >();

Scaler
Autoscaler
Metronome
Configuration

scaler. [ ] ();

Start()
Create()
ActivityID(true)
AllEventsCategory(true)

Correct Answer:

Answer Area

	scaler =
Scaler	
Autoscaler	
Metronome	
Configuration	

EnterpriseLibraryContainer.Current.GetInstance< [ ] >();

Scaler
Autoscaler
Metronome
Configuration

scaler. [ ] ();

Start()
Create()
ActivityID(true)
AllEventsCategory(true)

Example code:

autoscaler =

EnterpriseLibraryContainer.Current.GetInstance();

autoscaler.Start();
