### QUESTION 1

You deploy an Azure Stack integrated system that uses an external domain name of west.fabrikam.com

Currently, tenant users access the system internally.

You need to create a SSL certificate for the publication of externally accessible endpoints. The solution must ensure that tenant users can upload VHD files to Azure Stack remotely.

Which two names should you include in the certificate? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. adminmanagement.west.fabrikam.com
- B. \*.west.fabrikam.com
- C. \*.blob.west.fabrikam.com
- D. adminportal.west.fabrikam.com
- E. \*.trafficmanager.west.fabrikam.com

Correct Answer: BC

---

### QUESTION 2

You have an Azure Stack integrated system that hosts several tenants.

You delete a storage account that uses a large amount of data.

You discover that the storage account continues to use disk space on the system.

You need to ensure that the disk space is available to the tenants as quickly as possible.

What should you do first?

- A. From the Azure Stack administrator portal, click Reclaim space.
- B. From PowerShell, migrate the blob containers in the storage account to a new share.
- C. From PowerShell, run the Out-Default cmdlet.
- D. From the Azure Stack administrator portal, set Retention period for deleted storage accounts (days) to 0.

Correct Answer: A

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-manage-storage-accounts>

---

### QUESTION 3

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active Directory forest named contoso.com

You deploy an Azure Stack integrated system named Prod to a production environment. You also deploy an Azure Stack integrated system named Dev to a development environment. The developers who access Dev change frequently.

The Azure Stack integrated systems and the contoso.com forest are federated. The on-premises network contains a Hyper-V host that hosts a Red Hat Enterprise Linux virtual machine named Linux1. Linux1 has the following characteristics: A 2-TB disk Generation 1 10 virtual cores 128 GB of RAM A disk named LinuxVhd.vhdx

You plan to deploy infrastructure as a service (IaaS) to Dev for developer projects. The Marketplace on Dev is configured and ready to publish items. Dev contains one plan named Dev\_Plan1 and one offer named Dev\_Offer1.

Prod contains two plans and two offers. One of the offers is named Offer1.

All the IaaS and platform as a service (PaaS) tenant data must be backed up to an external location. The solution must ensure that the data can be restored if the datacenter that hosts Prod becomes unavailable.

End of repeated scenario.

You need to limit the resources available to the developers of Dev. The solution must meet the following resource requirements for the developers:

Five storage accounts

20 virtual machines 15 virtual networks 500 GB of storage 50 cores

What is the minimum number of quotas that should be created to limit the resources?

- A. 1
- B. 2
- C. 3
- D. 5

Correct Answer: C

You need a separate quota for each quota type: compute, storage, and network.

Incorrect Answers:

A, B: You need a separate quota for each quota type: compute, storage, and network. Virtual machines and cores are of the compute quota type; virtual networks are of the network quota type; and storage and storage accounts are of the storage quota type. You therefore need three quotas.

D: Virtual machines and cores are of the compute quota type; virtual networks are of the network quota type; and storage and storage accounts are of the storage quota type. You only need one of each quota type: compute, storage, and network

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-quota-types>

---

#### QUESTION 4

You have an Azure Stack integrated system in the perimeter network.

You need to ensure that users in the Internet can access Azure Stack Storage blobs.

Which TCP ports should you open on the firewall?

- A. 20 and 21
- B. 137 only
- C. 80 and 443
- D. 445 and 5445

Correct Answer: C

Storage Blob requires port 80 for http and port 443 for https.

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-integrate-endpoints>

---

#### QUESTION 5

You have an Azure Stack integrated system that has the following deployment details:

Region: East Naming prefix: azs External domain name: cloud.fabrikam.com

Which URL should you direct tenants to use based on the deployment details?

- A. <https://adminportal.cloud.fabrikam.com>
- B. <https://portal.east.cloud.fabrikam.com>
- C. <https://portal.azs.cloud.fabrikam.com>
- D. <https://adminportal.azs.cloud.fabrikam.com>
- E. <https://portal.cloud.fabrikam.com>
- F. <https://adminportal.east.cloud.fabrikam.com>

Correct Answer: B
