QUESTION 1

You have two Azure Stack integrated systems names Stack1 and Stack2.

You create an Azure Resource Manager template that successfully deploys to Stack1.

You attempt to deploy the template to Stack2, but the deployment fails. What is a possible cause of the deployment failure?

A. Stack1 has Azure Marketplace syndication disabled and Stack2 has Azure Marketplace syndication enabled.

- B. The template was created by using Microsoft Visual Studio Code.
- C. The template references an image that was not published on Stack2.

D. Stack1 has Azure Marketplace syndication enabled and Stack2 has Azure Marketplace syndication disabled.

Correct Answer: C

QUESTION 2

DRAG DROP

You have an Azure Stack integrated system that is isolated from the Internet.

You download an Azure Stack update to your administrator workstation.

You need to apply the update. The solution must ensure that only the Azure Stack operator can upload update packages.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Click Update now.	ana
Upload the package files.	0255.6011
Create a blob container that has the Blob access type.	CAP 212
Create a blob container that has the Container access type.	$\overline{\mathfrak{O}}$
Register the Microsoft.Update.Admin provider.	
Create a blob container that has the Private access type.	

Correct Answer:

Actions

Create a blob container that has the Blob access type. Create a blob container that has the Blob access type. Create a blob container that has the Container access type. Register the Microsoft Update. Admin provider.

QUESTION 3

You have an Azure Stack integrated system.

You deploy a platform as a service (PaaS) service that uses a file server.

You need to ensure that tenant users can use PowerShell Desired State Configuration (DSC) to manage the file server from the Azure Stack portal.

What should you do?

- A. From the Azure Stack administrator portal, add the DSC extension.
- B. From a privileged endpoint, run the Import-DscResource cmdlet.
- C. From a privileged endpoint, run the Start-DscConfiguration cmdlet.
- D. From the Azure Stack user portal, add the DSC extension.

Correct Answer: D

QUESTION 4

You plan to create a Linux virtual machine on an Azure Stack integrated system.

You download an Ubuntu Server image.

Which authentication method can use to access the Linux virtual machine by using SSH?

- A. The Extensible Authentication Protocol (EAP)
- B. a Kerberos token
- C. a service principal
- D. a key pair

Correct Answer: D

QUESTION 5

HOTSPOT

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the

scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active Directory forest named contoso.com

You deploy an Azure Stack integrated system named Prod to a production environment. You also deploy an Azure Stack integrated system named Dev to a development environment. The developers who access Dev change frequently.

The Azure Stack integrated systems and the contoso.com forest are federated.

The on-premises network contains a Hyper-V host that hosts a Red Hat Enterprise Linux virtual machine named Linux1. Linux1 has the following characteristics:

1.

A 2-TB disk

2.

Generation 1

3.

10 virtual cores

4.

128 GB of RAM

5.

A disk named LinuxVhd.vhdx

You plan to deploy infrastructure as a service (laaS) to Dev for developer projects. The Marketplace on Dev is configured and ready to publish items. Dev contains one plan named Dev_Plan1 and one offer named Dev_Offer1.

Prod contains two plans and two offers. One of the offers is named Offer1.

All the laaS and platform as a service (PaaS) tenant data must be backed up to an external location. The solution must ensure that the data can be restored if the datacenter that hosts Prod becomes unavailable.

End of repeated scenario.

You need to add a custom Windows Server 2016 image to the Marketplace on Dev.

Which command should you run? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.
