QUESTION 1

You are creating an application page that will open a dialog box. The application page uses a custom master page. You write the following code segment. (Line numbers are included for reference only.)

01

02 function DialogCallback (dialogResult, retumValue){>

03 function OpenEditDialog (id){

04 var options = {

url:" http://intranet/Jayouts /MsgToShow.aspx,

width: 300,

05 height: 300,

06 dialogReturnValueCallback : DialogCallback

07 };

08 SP.UI.ModalDialog.showModalDialog (options);

09 }

10

You need to ensure that the code opens the dialog box.

What should you do?

A. Add a script link that references SP.js .

B. At line 08, change showModalDialog to commonModalDialogOpen.

C. At line 08, change showModalDialog to openDialog.

D. Add a script link that references SharePoint.Dialog,js .

Correct Answer: A

QUESTION 2

You are creating two Web Parts named WPMaster and WPDetails.

You need to ensure that when an item is selected from WPMaster, the details of the item are displayed in WPDetails. This must occur without requiring WPDetails to retrieve the existing item from the data source.

What should you implement in WPMaster?

A. IWebActionable

B. IWebPartTable

C. IListProvider

D. IWebPartRow

Correct Answer: D

QUESTION 3

You create a sandboxed solution that contains a Web Part.

You need to debug the Web Part by using Microsoft Visual Studio 2010.

To which process should you attach the debugger?

A. w3wp.exe

B. owstimer.exe

C. spucworkerprocess.exe

D. spucworkerprocessproxy.exe

Correct Answer: C

MNEMONIC RULE: "Sandbox worker needs no proxy"

To provide additional protection, the solution\\'s assembly is not loaded into the main IIS process (w3wp.exe).

Instead, it is loaded into a separate process (SPUCWorkerProcess.exe).

Sandboxed Solution Considerations

http://msdn.microsoft.com/en-us/library/ee231562.aspx If the project type lets you change the Sandboxed Solution property and its value is set to true, then thedebugger attaches to a different process (SPUCWorkerProcess.exe).

Debugging SharePoint Solutions

http://msdn.microsoft.com/en-us/library/ee231550.aspx

QUESTION 4

You create a Feature.

You need to add an item to the context menu of a list.

Which type of element should you use?

A. a ListInstance

B. a ListTemplate

C. a CustomAction

D. a Module

Correct Answer: C

MNEMONIC RULE: "context menu item = CustomAction" A custom action can be added inside a secondary XML file, part of a normal feature. It is defined by a"CustomAction" element type. How to add a custom action to list elements context menu http://www.dev4side.com/community/technical-articles/sharepoint-2007/how-to-add-a- custom-action-to-listelements-context-menu.aspx

---

QUESTION 5

You create a Feature named Feature1. Feature1 is activated in a SharePoint site.

You create a Web Part that contains the following code.

SPSite site = new SPSite("http://intranet/site1");

SPWeb web = site.OpenWeb();

SPFeatureDefinition feature = SPFarm.Local.FeatureDefinitions["Feature1"];

You need to modify the Web Part to activate Feature1 in Site1 only.

Which code segment should you add to the Web Part?

A. site.Features.Add(feature.Id);

B. site.WebApplication.WebService.Features.Add(feature.Id);

C. web.Features.Add(feature.Id);

D. web.Site.WebApplication.WebService.Features.Add(feature.Id);

Correct Answer: C

MNEMONIC RULE: "add feature to http://intranet/site1" This question is confusing. site object is a SharePoint site collection with http://intranet/site1 beingthe root site (or root web) of this collection. The statement "activate Feature1 in Site1

only" makes it unclear how to treat "Site1" -- as a site collection or asa root web.

However, the second sentence of this question states: "Feature 1 is activated in SharePoint site". Well,SPWeb class represents SharePoint website. That\\'s why I picked Answer C, and you are free to disagree with me. It is possible that

Answer A is the correct one for this question.
