**QUESTION 1**

You are designing a SharePoint 2010 intranet site. Your design must:

.Specify the manner in which to store and read custom configuration settings.

.Use a standard user interface to allow the configuration settings to be created or changed.

You need to design the solution at the site collection and site levels to meet these requirements.

Which approach should you recommend?

A. Use the property bag to store custom configuration settings.

B. Use the hierarchical object store to store custom configuration settings

C. Use SharePoint lists to store the custom configuration settings

D. Add custom configuration settings in the web.config file to display the settings

Correct Answer: C

**QUESTION 2**

You are designing an application in a SharePoint 2010 server farm for an international firm. The sites must be localized for the languages in different countries.The application must include support for the following functionality:

.Feature-specific resource files .Language-specific Web Part package assemblies and resources .Language-specific Web template files .Language-specific _layout files

You need to design a solution that meets all these requirements.

Which approach should you recommend?

A. Create a language pack for the specific language required and add it to the solution store before adding the corporate solution. Deploy the language pack and then deploy the solution.

B. Create a language pack for the specific language required and add it to the solution store before adding the corporate solution. Deploy the solution and then deploy the language pack.

C. Create a language pack for the specific language required and add it to the solution store after adding the corporate solution. Deploy the language pack and then deploy the solution.

D. Create a language pack for the specific language required and add it to the solution store after adding the corporate solution. Deploy the solution and then deploy the language pack.

Correct Answer: D

**QUESTION 3**

You are designing a SharePoint 2010 farm implementation that will include an extranet zone that will employ forms-based authentication (FBA).The plan must:

.Specify how farm administrators will manage modifications to the configuration settings for the FBA within each Web application.

.Support granular modifications to the individual Web applications.

.Include a process to apply the modifications to the SharePoint configuration database.

.Specify a process to deploy the changes throughout the server farm by propagating the changes to all Web front-end servers.

You need to create a software configuration management plan for the farm that meets all these requirements.

Which approach should your plan recommend?

A. Create a feature that contains code to read, modify, and save the configuration setting for the SPWebApplication object for each Web application. Save the settings in the hierarchical object store by creating a SPPersistedObject class to store the configuration.

B. Create a feature that contains code to modify the configuration settings to the web.config file for each Web application. Then propagate the changes programmatically by implementing the SPWebConfigModification class.

C. Build a custom list for each Web application that stores the required configuration information. Create a custom workflow that uses the Set Field in Current Item action to synchronize the settings in the list with the configuration database and the Web servers.

D. Build the required changes declaratively by creating an XML extension containing the settings needed. Deploy the file to the 14\Config directory. Then use the Stsadm copyappbincontent command to merge these changes with the existing web.config file.

Correct Answer: B

**QUESTION 4**

Your company is rebranding its corporate extranet SharePoint 2010 site.The new design requires the site\\'s global navigation to use nonstandard fonts for both the top-level and secondary drop-down menus.You need to ensure that the new branding is rendered consistently in all browsers supported by SharePoint 2010.

Which approach should you recommend?

A. Specify the CssClass of the SharePoint AspMenu control.

B. Specify the DynamicMenuItemStyle property of the SharePoint AspMenu control to render the text as an image.

C. Use a theme to specify the font in the design.

D. Develop a custom menu control to render the text as an image.

Correct Answer: D

**QUESTION 5**

You are designing a SharePoint 2010 application that displays information from an external database.You need to develop the application to meet the following requirements:

.Remote connections to the external database are not allowed. .Data from multiple tables must be joined into a single list. .The list must be synchronized with the external database.

Which approach should you recommend?

A. Build a Web service to manage each table, and use the SPQuery object to join the data fields into a single list.

B. Build a Web service to manage each table, use Business Connectivity Services (BCS) to import the individual tables into lists, and then create a new list that joins these external lists together.

C. Build a Web service to join the data fields into a single list, and use BCS to synchronize the list with the external database.

D. Build a Web service to join the data fields into a single list, and implement event receivers to synchronize the list with the external database.

Correct Answer: C
