QUESTION 1

You use BizTalk Server 2010 to receive flat file messages from a customer. You create a pipeline for disassembling the flat file messages. When BizTalk receives the messages, the flat file disassembler throws an error because a date is in the wrong format. The customer cannot change the sending application. You implement a custom pipeline component for correcting date formatting errors. You need to create a new pipeline for processing the messages received from the customer.

What should you do?

A. Add the custom pipeline component to the Validate stage. Add the EDI disassembler to the Disassemble stage.

B. Add the custom pipeline component to the Resolve Party stage. Add the EDI disassembler to the Disassemble stage.

C. Add the custom pipeline component to the Validate stage. Add the flat file disassembler to the Disassemble stage.

D. Add the custom pipeline component to the Decode stage. Add the flat file disassembler to the Disassemble stage.

Correct Answer: D

QUESTION 2

You send data to a Microsoft Windows Communication Foundation (WCF) service from a BizTalk Server 2010 application. You generate supporting artifacts for calling the service from Microsoft Visual Studio by using the Consume WCF Service wizard. You modify the names used in the orchestration to SendWCFPort for the port and to TransmitData for the port operation. In the orchestration, you set the context property BTS.Operation to the operation name. You deploy the BizTalk projects and import the generated binding file to create the send port. You need to configure the SOAP action header for the send port that calls the WCF service.

Which operation should be specified in the SOAP action header XML?

A. TransmitData

B. SendData

C. SendWCFPort\TransmitData

D. SendWCFPort\SendData

Correct Answer: A

QUESTION 3

A BizTalk Server 2010 solution includes a map that is used in a loan approval process. The input schema contains values for loan amount and yearly salary. The output schema contains a Boolean value that indicates the approval status of the loan. There is a Microsoft .NET helper method in another project within the solution that accepts the two

parameters for loan amount and yearly salary and returns the approval status Boolean value. You need to invoke the .NET helper method from a scripting functoid in the map.

What should you do?

A. Use the Inline C# script type to reference the class containing the method with a C# using statement.

B. Use the Inline XSLT script type to reference the class containing the method by its fully qualified assembly name.

C. Add a reference to the project containing the class that contains the method. Reference the method as an external assembly script type in the scripting functoid configuration.

D. Add a reference to the project containing the class that contains the method. Use the Inline C# script type to reference the assembly in the scripting functoid configuration.

Correct Answer: C

QUESTION 4

You are configuring a BizTalk Server 2010 environment with one server running Microsoft SQL Server for the BizTalk databases and Enterprise Single Sign-On (SSO) store. There are two BizTalk servers. All software has been installed. Both BizTalk servers will share a BizTalk group. You need to complete the installation in this environment. You start the BizTalk Server Configuration wizard on both BizTalk servers.

What should you do next?

A. On BizTalk Server 1, select and apply Basic Configuration. On BizTalk Server 2, select and apply Basic Configuration.

B. On BizTalk Server 1, select Custom Configuration. Create a new SSO system and BizTalk group on the server running SQL Server. On BizTalk Server 2, select Custom Configuration. Create a new SSO system and BizTalk group on the server running SQL Server.

C. On BizTalk Server 1, select Custom Configuration. Create a new SSO system and BizTalk group on the server running SQL Server. On BizTalk Server 2, select and apply Basic Configuration.

D. On BizTalk Server 1, select Custom Configuration. Create a new SSO system and BizTalk group on the server running SQL Server. On BizTalk Server 2, select Custom Configuration. Join the existing SSO system and BizTalk group.

Correct Answer: D

QUESTION 5

A BizTalk Server 2010 solution receives invoices in XML format. The solution receives only two types of files: XML files that contain only a single invoice. The filename of these files starts with the letter S.XML files that contain multiple invoices. The filename of these files starts with the letter M. You create a receive port with two FILE receive locations. Both receive locations point to the same folder on the file system but each receive location has a different file mask. You configure each receive location to pick up one type of invoice XML. You need to ensure that the single-invoice XML files

are processed as soon as possible, and the multiple-invoice XML files are only processed outside of office hours.

What should you do?

A. In the receive port, delete one of the receive locations. Configure the other receive location to pick up both types of files. Set the service window to reflect the outside office hour time range.

B. Set the service window of the receive location that picks up the multiple-invoice XML files to reflect the outside office hour time range. Enable both receive locations.

C. Set the schedule start date and stop date of the receive location that picks up the multiple- invoice XML files to reflect the outside office hour time range.

D. Set the service window of the receive location that picks up the multiple-invoice XML files to reflect the outside office hour time range. Make sure this receive location is disabled.

Correct Answer: B
