-  **800,000+** Satisfied Customers

QUESTION 1

An existing BizTalk Server 2010 messaging solution for processing orders has a send port group that contains two send ports. Send Port A is for Supplier A and Send Port B is for Supplier B. Each supplier receives only one copy of each order message. The order schema has a promoted property named OrderAmount that contains the total amount of the order. The send port group subscribes to all messages where a promoted property OrderAmount exists. The send ports do not have a filter defined. Messages with an order amount less than or equal to 1000 must be sent to Supplier A. Messages with an order amount greater than 1000 must be sent to Supplier B. Only a single message can be sent to either Supplier A or Supplier B. You need to modify the solution to route each order message to either Supplier A or Supplier B.

What should you do?

- A. Delete the existing filter condition on the send port group. Add a filter condition on the send port group to subscribe for messages where OrderAmount is 1000.
- B. Keep the existing filter condition on the send port group. Add a filter condition on the send port group to subscribe for messages where OrderAmount is than 1000.
- C. Set a filter on Send Port A to subscribe for messages where OrderAmount is 1000. Stop and start the send port group.
- D. Set a filter on Send Port A to subscribe for messages where OrderAmount is 1000. Delete the send port group.

Correct Answer: D

QUESTION 2

A company uses an existing BizTalk Server 2010 solution to process customer orders. A customer sends you positional flat files containing orders. All dates in the customer flat file are provided as string data types in a YYYYMMDD format. The orchestration requires that the dates are treated as date data types in the YYYYMMDD format. You need to ensure that dates provided by the customer are specified as dates in the YYYYMMDD format and not strings.

Which task or tasks should you perform by using the BizTalk Schema Editor?

- A. Change the Base Data Type property to xs:date and set the MinFacet and MaxFacet properties to yyyyMMdd for each field that contains a date.
- B. Create a SimpleType property with a regular expression Pattern equal to yyyyMMdd. Change the Base Data Type property to the SimpleType property for each field that contains a date.
- C. Create a SimpleType property with a regular expression Pattern equal to yyyyMMdd. Change the Data Type property to the SimpleType property for each field that contains a date.
- D. Change the Data Type property to xs:date and set the Custom Date/Time Format property to yyyyMMdd for each field that contains a date.

Correct Answer: D

QUESTION 3

A BizTalk Server 2010 solution uses an orchestration to call an external Microsoft .NET assembly. The class on the assembly is not serializable. The Expression shape used to call the .NET assembly is contained within a scope that has its Transaction Type property set to Atomic. The call to the .NET assembly occasionally results in an exception being thrown. You need to handle the exception when it is thrown. Create a new scope with the Transaction Type property set to Long Running.

What should you do next?

- A. Add an exception handler to the new scope. Drag and drop the atomic scope below the new scope.
- B. Add an exception handler to the new scope. Drag and drop the atomic scope above the new scope.
- C. Add an exception handler to the new scope. Drag and drop the atomic scope inside the new scope.
- D. Add a compensation block to the atomic scope. Drag and drop the atomic scope inside the new scope.

Correct Answer: C

QUESTION 4

A supplier sends messages that they sign with a certificate to a BizTalk Server 2010 application. You need to ensure that the received messages are signed with the certificate. What should you do?

- A. Use the XMLTransmit pipeline.
- B. Use a custom pipeline that leverages the MIME/SMIME encoder component.
- C. Use a custom pipeline that leverages the MIME/SMIME decoder component.
- D. Use the XMLReceive pipeline.

Correct Answer: C

QUESTION 5

You are developing a BizTalk Server 2010 orchestration that processes messages received from the BizTalk FILE adapter. You need to retrieve the original file name of the message and store it in a variable named FileName for future processing.

What should you do?

- A. Inside a message assignment shape in the BizTalk Orchestration Designer, use the WSS.FileName context property to assign the FileName variable.
- B. Inside an expression shape in the BizTalk Orchestration Designer, use the LEGACY.FilePath context property to

assign the FileName variable.

C. Inside a message assignment shape in the BizTalk Orchestration Designer, use the BTS.MessageType context property to assign the FileName variable.

D. Inside an expression shape in the BizTalk Orchestration Designer, use the FILE.ReceivedFileName context property to assign the FileName variable.

Correct Answer: D
