QUESTION 1

Your network contains an Active Directory forest named contoso.com. The forest contains two sites named Seattle and Montreal. The Seattle site contains two domain controllers. The domain controllers are configured as shown in the following table.

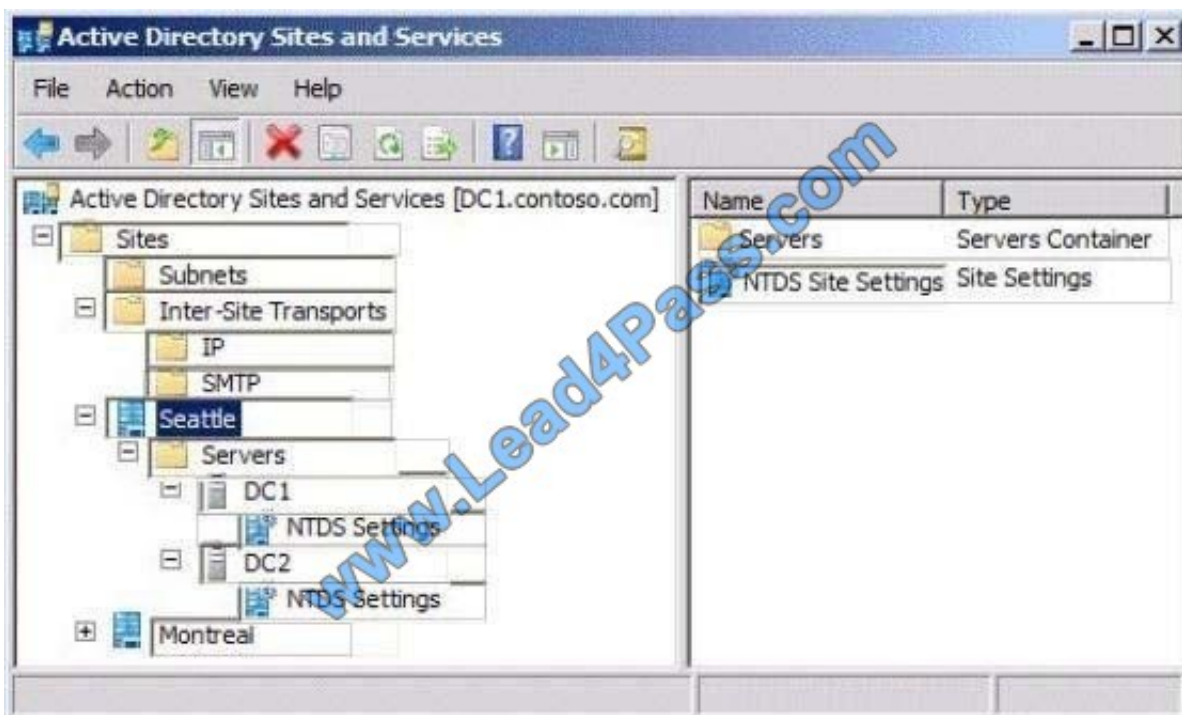

Name	Configuration
DC1	DNS server
DC2	DHCP server and file server

The Montreal site contains a domain controller named DC3. DC3 is the only global catalog server in the forest.

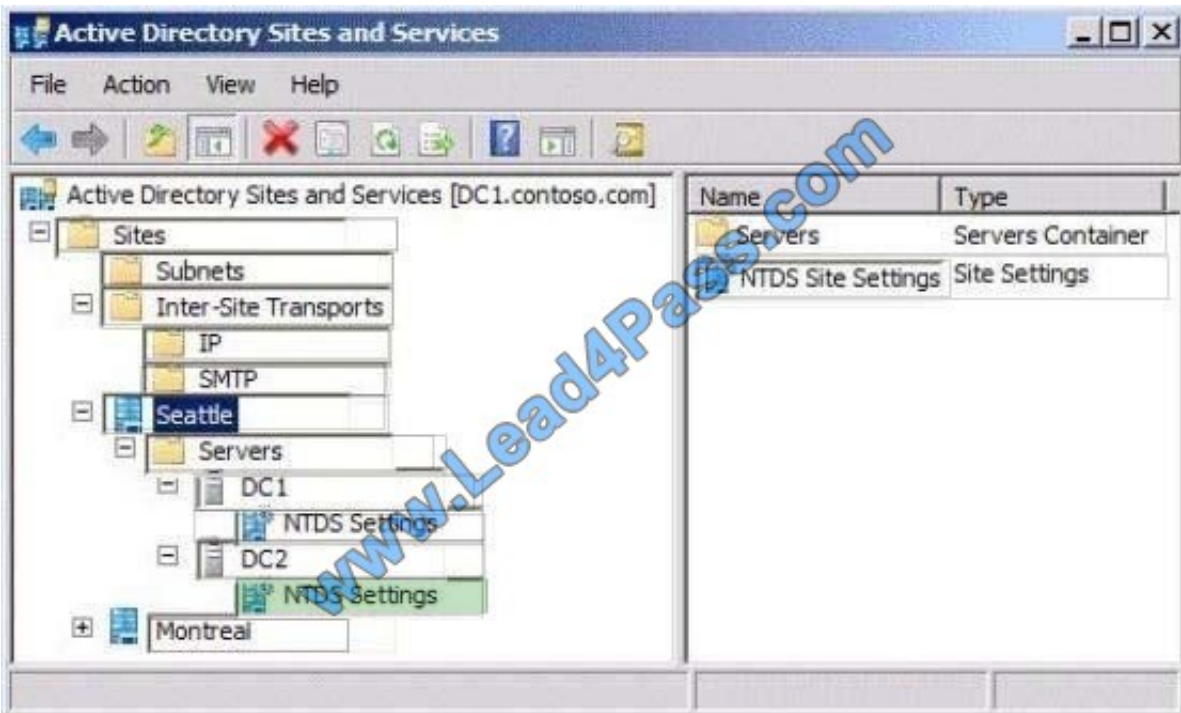

You need to configure DC2 as a global catalog server.

Which object's properties should you modify? To answer, select the appropriate object in the answer area.

Point and Shoot:

Correct Answer:

<http://technet.microsoft.com/en-us/library/cc794934.aspx> To designate a domain controller to be a global catalog server

1. Click Start, point to Administrative Tools, and then click Active Directory Sites and Services.
2. In the console tree, expand the Sites container, and then expand the site in which you are designating a global catalog server.
3. Expand the Servers container, and then expand the Server object for the domain controller that you want to designate as a global catalog server.
4. Right-click the NTDS Settings object for the target server, and then click Properties.
5. Select the Global Catalog check box, and then click OK.

QUESTION 2

A corporate network includes a single Active Directory Domain Services (AD DS) domain.

The HR department has a dedicated organization unit (OU) named HR. The HR OU has two sub-OUs:

HR Users and HR Computers. User accounts for the HR department reside in the HR Users OU. Computer accounts for the HR department reside in the HR Computers OU. All HR department employees belong to a security group named

HR Employees. All HR department computers belong to a security group named HR PCs.

Company policy requires that passwords are a minimum of six characters.

You need to ensure that, the next time HR department employees change their passwords, the passwords are required to have at least eight characters. The password length requirement should not change for employees of any other

department.

What should you do?

- A. Create a fine-grained password policy and apply it to the HR Computers OU.
- B. Modify the password policy in the GPO that is applied to the domain controllers OU.
- C. Create a fine-grained password policy and apply it to the HR Employees group.
- D. Modify the password policy in the GPO that is applied to the domain.

Correct Answer: C

QUESTION 3

Your network contains an Active Directory forest named contoso.com. The forest contains four child domains named east.contoso.com, west.contoso.com, south.contoso.com, and north.contoso.com.

You need to create four new groups in the forest root domain. The groups must be configured as shown in the following table.

Group name	Group members	Group requirement
Group1	A universal group from east.contoso.com	Visible in all domains
Group2	A domain local group from contoso.com A universal group from north.contoso.com	Only visible in the contoso.com domain
Group3	User accounts from contoso.com	Only visible in the contoso.com domain
Group4	A global group from south.contoso.com A universal group from west.contoso.com	Visible in all domains

What should you do? To answer, drag the appropriate group type to the correct group name in the answer area.

Select and Place:

Correct Answer:

QUESTION 4

Your company has a main office and a branch office. You deploy a read-only domain controller (RODC) that runs Microsoft Windows Server 2008 to the branch office.

You need to ensure that users at the branch office are able to log on to the domain by using the RODC.

What should you do?

- A. Add another RODC to the branch office.
- B. Configure a new bridgehead server in the main office.
- C. Decrease the replication interval for all connection objects by using the Active Directory Sites and Services console.
- D. Configure the Password Replication Policy on the RODC.

Correct Answer: D

Answer: Configure the Password Replication Policy on the RODC.

<http://technet.microsoft.com/en-us/library/cc754956%28v=ws.10%29.aspx> RODC Frequently Asked Questions

What new attributes support the RODC Password Replication Policy? Password Replication Policy is the mechanism for determining whether a user or computer's credentials are allowed to replicate from a writable domain controller to an RODC. The Password Replication Policy is always set on a writable domain controller running Windows Server 2008. What operations fail if the WAN is offline, but the RODC is online in the branch office? If the RODC cannot connect to a writable domain controller running Windows Server 2008 in the hub, the following branch office operations fail:

Password changes
Attempts to join a computer to a domain
Computer rename
Authentication attempts for accounts whose credentials are not cached on the RODC
Group Policy updates that an administrator might attempt by running the gpupdate /force command
What operations succeed if the WAN is offline, but the RODC is online in the branch office? If the RODC cannot connect to a writable domain controller running Windows Server 2008 in the hub, the following branch office operations succeed:

Authentication and logon attempts, if the credentials for the resource and the requester are already cached, Local RODC server administration performed by a delegated RODC server administrator.

QUESTION 5

Your network contains an Active Directory domain named litwareinc.com. The domain contains two sites named Site1 and Site2. Site2 contains a read-only domain controller (RODC). You need to identify which user accounts attempted to authenticate to the RODC.

Which tool should you use?

- A. Repadmin
- B. Dcdiag
- C. Get-ADAccountResultantPasswordReplicationPolicy
- D. Active Directory Sites and Services

Correct Answer: A
