QUESTION 1

You create a new Active Directory domain. The functional level of the domain is Windows Server 2003. The domain contains five domain controllers that run Windows Server 2008 R2.

You need to monitor the replication of the group policy template files.

Which tool should you use?

A. Dfsrdiag

B. Fsutil

C. Ntdsutil

D. Ntfrsutl

Correct Answer: D

With domain functional level 2008 you have available dfs-r sysvol replication. So with DFL2008 you can use the DFSRDIAG tool. It is not available with domain functional level 2003. With domain functional level 2003 you can only use Ntfrsutl.

QUESTION 2

You are the systems administrator of a large organization that has recently implemented Windows Server 2008 R2.

You have a few remote sites that do not have very tight security.

You have decided to implement read-only domain controllers (RODC).

What forest functional levels does the network need for you to do the install? (Choose Three)

A. Windows 2000 Mixed

B. Windows 2008 R2

C. Windows 2003

D. Windows 2008

Correct Answer: BCD

http://technet.microsoft.com/en-us/library/cc731243%28v=ws.10%29.aspx Prerequisites for Deploying an RODC

Ensure that the forest functional level is Windows Server 2003 or higher.

..

Deploy at least one writable domain controller running Windows Server 2008 or Windows Server 2008 R2 in the same domain as the RODC and ensure that the writable domain controller is also a DNS server that has registered a name

server (NS) resource record for the relevant DNS zone. An RODC must replicate domain updates from a writable

domain controller running Windows Server 2008 or Windows Server 2008 R2.

QUESTION 3

Your network contains two Active Directory forests named contoso.com and fabrikam.com. A two-way forest trust exists between the forests. Selective authentication is enabled on the trust.

Fabrikam.com contains a server named Server1.

You assign Contoso\Domain Users the Manage documents permission and the Print permission to a shared printer on Server1.

You discover that users from contoso.com cannot access the shared printer on Server1. You need to ensure that the contoso.com users can access the shared printer on Server1.

Which permission should you assign to Contoso\Domain Users.

To answer, select the appropriate permission in the answer area.

Point and Shoot:
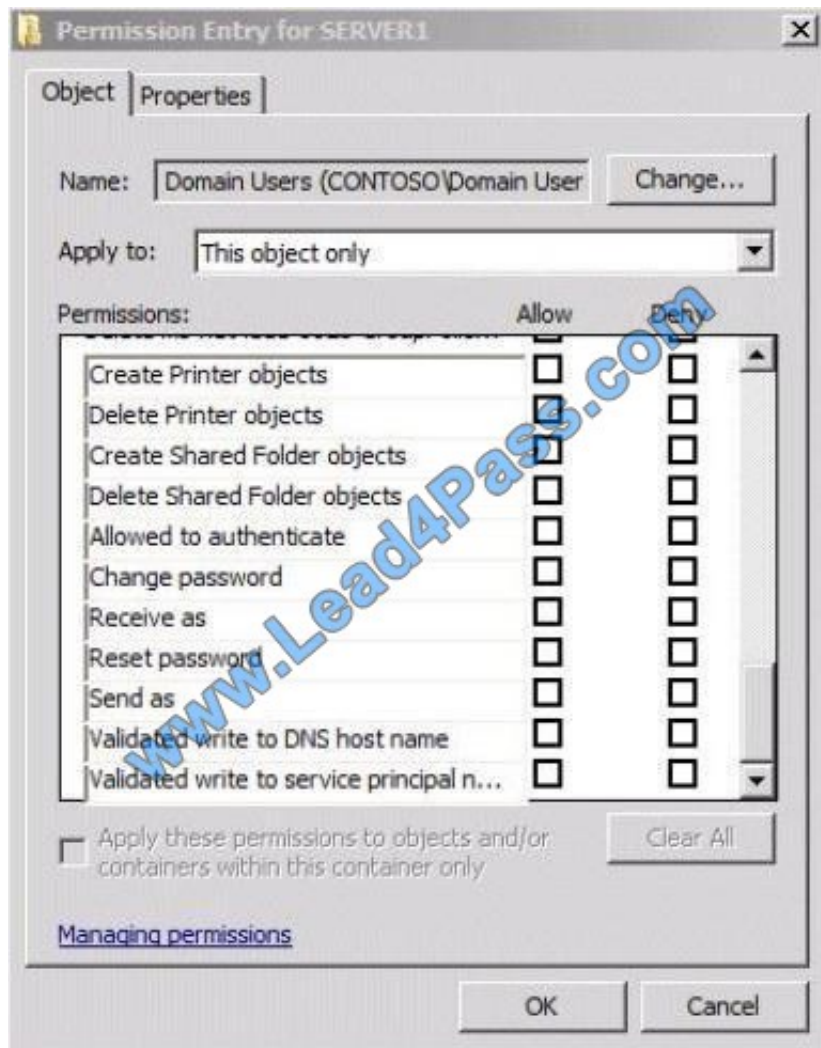

Correct Answer:

Reference: http://technet.microsoft.com/en-us/library/cc816733.aspx

Grant the Allowed to Authenticate Permission on Computers in the Trusting Domain or Forest For users in a trusted Windows Server 2008 or Windows Server 2003 domain or forest to be able to access resources in a trusting Windows Server 2008 or Windows Server 2003 domain or forest where the trust authentication setting has been set to selective authentication, each user must be explicitly granted the Allowed to Authenticate permission on the security descriptor of the computer objects (resource computers) that reside in the trusting domain or forest.

QUESTION 4

Your network contains an Active Directory domain named contoso.com.

A portion of the Group Policy object (GPO) settings for a computer in the contoso.com domain is configured as shown in the following exhibit. (Click the Exhibit button.)
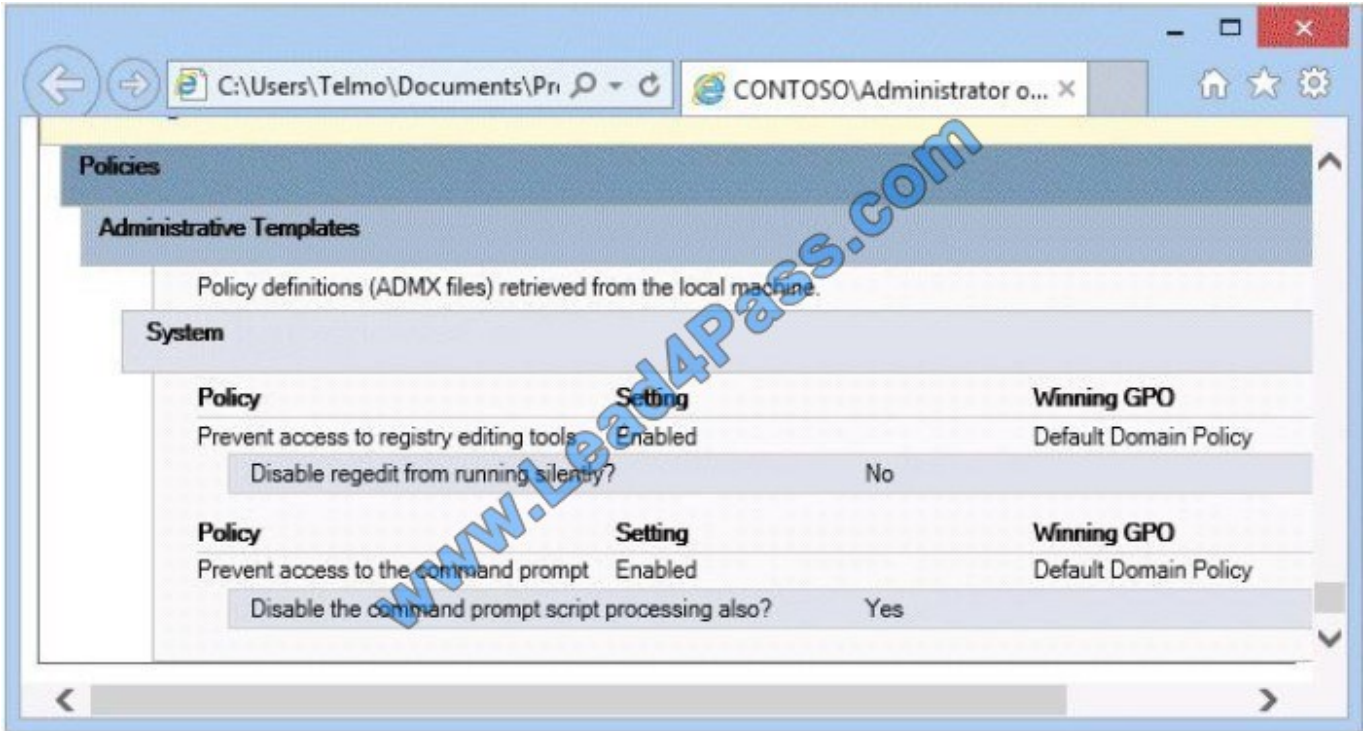

To answer, complete each statement according to the information presented in the exhibit.

Hot Area:

Correct Answer:

The currently logged on user will be able to run a file that has the ... extension.

```
.bat
.cmd
.msi
```

The currently logged on user will be unable to run ...

```
cmd.exe.
dnscmd.exe.
cmdkey.exe.
```
QUESTION 5

Your network contains an Active Directory domain. The domain contains four domain controllers.

You create a new application directory partition.

You need to ensure that the new application directory partition replicates to only three of the domain controllers.

Which tool should you use?

A. Active Directory Administrative Center

B. Dsamain

C. Dsmod

D. Ntdsutil

Correct Answer: A
