QUESTION 1

Your network contains an Active Directory domain named contoso.com. The network is configured to use ISATAP.

You have a server named Server1 that runs Windows Server 2008 R2. On Server1, you discover that a tunnel adapter named isatap.contoso.com has a Media State of "Media disconnected".

You confirm that Server1 has a valid network connection and can query the DNS server. You need to ensure that the isatap.contoso.com tunnel adapter has an IPv6 address.

What should you do?

- A. Start the IP Helper service.
- B. Start the IPsec Policy Agent service.
- C. Add a new rule to Windows Firewall.
- D. Add an entry for ISATAP to the Hosts file.

Correct Answer: A

The IP Helper service must be running for IPv6 transition technologies such as ISATAP, Teredo, and 6to4 to function on the computer. This service provides automatic IPv6 connectivity over an IPv4 network, and if the service is stopped, the computer will have only IPv6 connectivity if it is connected to a native IPv6 network. Therefore, if your network is not native IPv6, disabling this service on Windows Server 2008 computers effectively disables IPv6 on them.

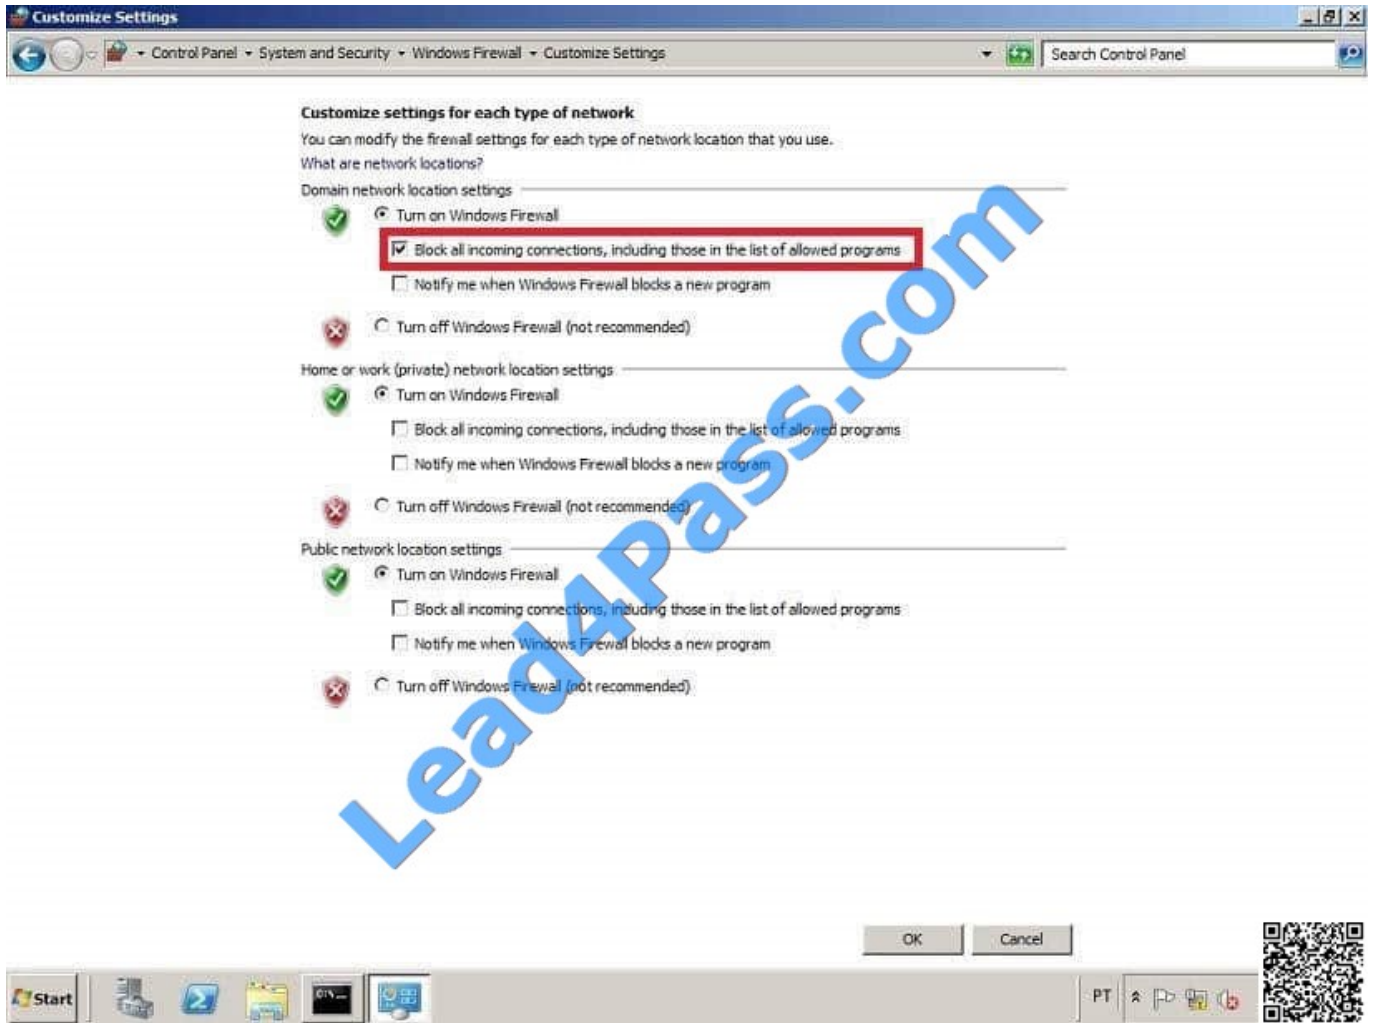

QUESTION 2

Your network contains one Active Directory domain. You have a member server that runs Windows Server 2008 R2.

You need to immediately disable all incoming connections to the server. What should you do?

- A. From the Services snap-in, disable the IP Helper.
- B. From the Services snap-in, disable the Netlogon service.
- C. From Windows Firewall, enable the Block all connections option on the Public Profile.
- D. From Windows Firewall, enable the Block all connections option on the Domain Profile.

Correct Answer: D

QUESTION 3

Your network contains an Active Directory domain. The domain contains a server that runs Windows Server 2008 R2. The server contains 10 shared folders.

You need to be notified by email when users save .mp3 files to the shared folders.

What should you do?

To answer, move the appropriate actions from the Possible Actions list to the Necessary Actions area and arrange them in the correct order.

Select and Place:

Possible Actions	Necessary Actions
Create a classification rule.	
Create a soft quota template.	
Create a hard quota template.	
Mndify the NTFS permissions.	
Modify the Share permissions.	
Create an active screening template.	
Create a passive screening template.	
Link the template to the shared folders.	
Install the File Server Resource Manager (FSRM) role service.	
Add the Windows System Resource Manager (WSRM) feature.	

Correct Answer:

Possible Actions	Necessary Actions
Create a classification rule.	Install the File Server Resource Manager (FSRM) role service.
Create a soft quota template.	Create a passive screening template.
Create a hard quota template.	Link the template to the shared folders.
Mndify the NTFS permissions.	
Modify the Share permissions.	
Create an active screening template.	
Add the Windows System Resource Manager (WSRM) feature.

QUESTION 4

Your network contains two offices named Office1 and Office2. The offices connect to each other by using a demand-dial connection.

You add a new subnet in Office2.

You need to ensure that a demand-dial connection starts when users attempt to connect to resources in the new Office2 subnet.

What should you do from the Remote Routing and Access console?

- A. From the remote access server in Office2, right-click the demand-dial interface and click Connect.
- B. From the remote access server in Office1, right-click the demand-dial interface and click Connect.
- C. From the remote access server in Office1, right-click the demand-dial interface and click Update Routes.
- D. From the remote access server in Office2, right-click the demand-dial interface and click Update Routes.

Correct Answer: C

QUESTION 5

Your company has five office buildings in the same city. Each building has its own IP subnet. There are shared printers in each building. Active Directory sites and Active Directory subnets exist for each office.

Each user has a laptop that runs Windows 7. The users frequently travel between the office buildings. You plan to publish all of the shared printers in Active Directory and to specify the Location attribute of each shared printer.

You need to ensure that the users can browse for shared printers based on the location of the printer. The solution must ensure that when the users attempt to add printers by using the Add Printer wizard, the users\' current location is used automatically.

Which two actions should you perform? (Each correct answer presents part of the solution.

Choose two.)

- A. From the properties of each subnet object, set a value for the Location attribute.
- B. From a Group Policy object (GPO), enable the Allow pruning of published printers setting.
- C. From the properties of each print server computer account, set a value for the Location attribute.
- D. From a Group Policy object (GPO), enable the Pre-populate printer search location text sitting.
- E. From the properties of each Windows 7 computer account, set a value for the Location attribute.

Correct Answer: AD
