QUESTION 1

You need to recommend an organizational unit (OU) structure that supports the company's planned changes. What should you recommend?

- A. Create one OU for each department. Create one OU for all of the offices.
- B. Create one OU for each office. Create one OU for all of the departments.
- C. Create one OU for all of the offices. In the office OU, create one OU for each department.
- D. Create one OU for each department. In each department OU, create one OU for each office.

Correct Answer: D

PLANNED CHANGES

Litware plans to deploy Group Policy object (GPOs). The planned deployment must meet the following requirements:

- Deploy a GPO to a user based on his respective department.
- Deploy a GPO to a client computer based on its respective local office.
- Minimize the amount of administrative effort required to manage the GPOs.
- Prevent the users in each department from receiving GPOs from other departments.

Litware plans to change the name of AD.liteware.com to east.liteware.com. The planned change must meet the following requirements:

- Minimize administrative effort.
- Minimize the impact on the users in AD.liteware.com.

Litware plans to deploy RemoteApp programs to meet the following requirements:

- The RemoteApp programs must be visible from the Start menu on each client computer.
- The RemoteApp programs must be published by using the minimum amount of administrative effort.

Litware plans to deploy several Hyper-V servers that will host multiple virtual machines (VMs). The deployment must meet the following requirements:

- Minimize administrative effort.
- Back up the VMs to a tape library.
- Store all of the VM files on a Storage Area Network (SAN).
- Convert all of the client computers in the finance department to a VM.

Litware plans to deploy a network access solution. The planned deployment must use the minimum amount of administrative effort.

QUESTION 2

You need to recommend a management strategy for the planned virtualization solution. The strategy must meet the company's technical requirements. What should you include in the recommendation?

- A. Install the Hyper-V Manager console on each client computer. Configure the Authorization Manager roles.
- B. Install the Hyper-V Manager console on each client computer. Modify the integration services settings for each VM.

C. Deploy Microsoft System Center Virtual Machine Manager (VMM) 2007 R2 and the VMM Self-Service Portal.

D. Deploy Microsoft System Center Virtual Machine Manager (VMM) 2007 R2. Install the VMM console on the client computers of the developers.

Correct Answer: C

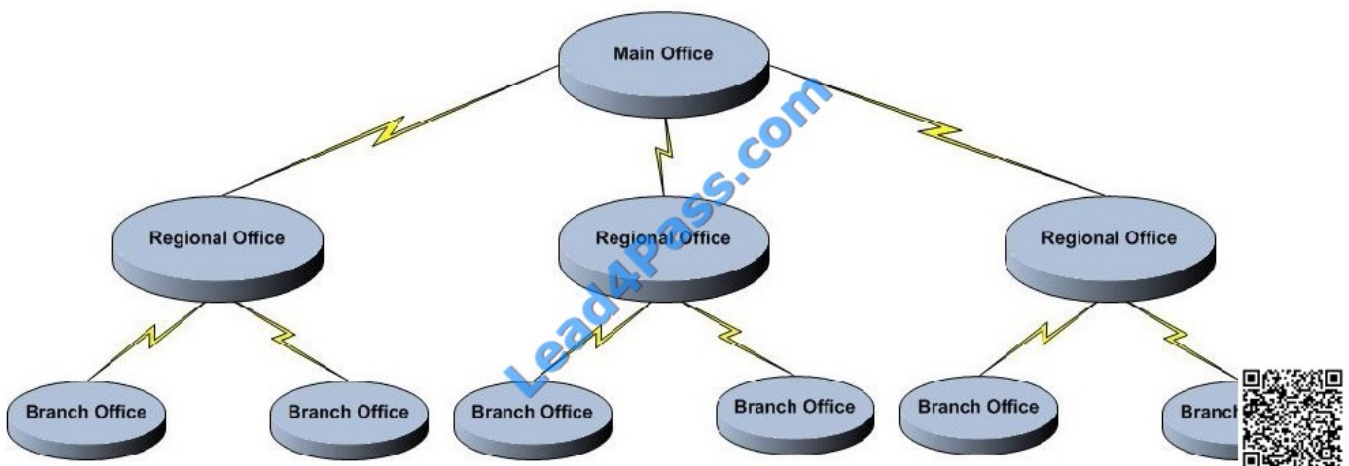

Blue Yonder Airlines must meet the following virtualization requirements:

- Ensure that each developer can create and manage his own virtual machine (VM).
- Prevent the developers from configuring the settings of other developers' VMs.
- Prevent the developers from creating VMs that use more than 2 GB of memory.
- Minimize the amount of bandwidth used when users access files over WAN links.

QUESTION 3

Your company has a main office, three regional offices, and six branch offices. The network links are configured as shown in the exhibit. (Click the Exhibit button.)

The network consists of one Active Directory domain. You create an Active Directory site for each office. You create a site link for each wide area network (WAN) link.

The Bridge all site links option is disabled.

You need to plan the deployment of domain controllers. The solution must meet the following requirements. Windows PowerShell must be installed on all domain controllers in each regional office. Domain user account passwords stored on

the domain controllers must be protected if a branch office domain controller is stolen.

What should you do?

A. In each branch office and in each regional office, install a Server Core installation of Windows Server 2008 and configure a writable domain controller.

B. In each branch office and in each regional office, install a full installation of Windows Server 2008 and configure a

read-only domain controller (RODC).

C. In each branch office, install a Server Core installation of Windows Server 2008 and configure a read-only domain controller (RODC). In each regional office, install a full installation of Windows Server 2008 and configure a writable domain controller.

D. In each branch office, install a full installation of Windows Server 2008 and configure a read-only domain controller (RODC). In each regional office, install a Server Core installation of Windows Server 2008 and configure a writable domain controller.

Correct Answer: C

To ensure that the domain user account passwords stored on the domain controllers must be protected if a branch office domain controller is stolen, you need to install a Server Core installation of Windows Server 2008 and configure it as a read-only domain controller (RODC) in each branch office.

The Server Core installation of Windows Server 2008 will install only limited services on the RODC, which will store passwords. This installation will be very secure. A Server Core installation provides a minimal environment for running specific server roles, which reduces the maintenance and management requirements and the attack surface for those server roles.

Next you can install a full installation of Windows Server 2008 and configure it as a writable domain controller in each regional office firstly because for RODCs to work you need to configure writable domain controllers from where data replication can happen and secondly you need to install them because you need to install Windows PowerShell on all domain controllers in each regional office. QUESTION 4

You work as an IT professional in an international company which is named Contoso. Your major job is to translate business goals into technology decisions and plan mid-range to long-term strategies. And you are experienced in network infrastructure, security policy and business continuity. In your company, you are responsible for infrastructure design and global configuration changes.

One Active Directory domain is contained by your network. There are Three hundred client computers and 1,000 client computers. Windows XP Service Pack 2 (SP2) is run by the three hundred client computers and Windows Vista is run by 1,000 client computers. You want to have Terminal Services deployed on new servers, and Windows Server 2008 will be run by new servers.

Since you are the technical support, you are required to design the deployment of Terminal Services RemoteApp (TS RemoteApp). Which option should be included in your design?

- A. A Group Policy object (GPO) should be Created and linked to the Active Directory domain. And then, the GPO should be changed to enable access through Terminal Services Gateway (TS Gateway).
- B. On the Terminal Servers, all user accounts should be added to the Remote Desktop Users local group.
- C. On all computers which Windows XP is run, the Remote Desktop Connection 6.0 client update should be installed.
- D. In the Active Directory domain, all user accounts should be added to the Remote Desktop Users built-in local group.

Correct Answer: C

QUESTION 5

Your network consists of one Active Directory domain. The domain contains servers that run Windows Server 2008 R2. The relevant servers are configured as shown in the following table.

Server name	Installed services
Server1	Active Directory Domain Services (AD DS)
Server2	Remote Desktop Services
Server3	Internet Information Services (IIS)

All client computers run Windows 7.

Remote users connect to the network from the Internet by using virtual private network (VPN) connections.

You plan to enable remote users to run RemoteApp applications on Server2.

You need to prepare the environment to provide users access to the applications. The solution must provide a custom Web page that contains shortcuts to authorized applications for each user.

What should you do?

- A. On Server2, install the Web Server (IIS) server role.
- B. On Server2, install the Terminal Services server role that has the Terminal Services Gateway (TS Gateway) role service.
- C. On Server3, install the Terminal Services server role that has the Terminal Services Web Access (TS Web Access) role service.
- D. On Server2 and Server3, install the Terminal Services server role that has the Terminal Services Session Broker (TS Session Broker) role service.

Correct Answer: C
