QUESTION 1

You need to recommend changes to the Active Directory infrastructure to ensure that each user is redirected to file replicas in his or her local office. What should you include in the recommendation?

A. Use additional connection objects.

B. Use a domain-based Distributed File System (DFS) namespace.

C. Place computer objects in the same AD sites as the local servers.

D. Use additional site objects.

Correct Answer: C

QUESTION 2

You need to recommend changes to the Active Directory environment that support the company\\\'s planned migration of the contoso.com users. What should you include in the recommendation?

A. Kerberos delegation

B. selective authentication

C. service principal names (SPNs)

D. SID history

Correct Answer: D

Planned Changes
Lucerne Publishing plans to implement the following changes:

- Deploy Active Directory Rights Management Services (AD RMS) to the ucernepublishing.com forest.
- Deploy a new line-of-business application named App5 on the Remote Desktop servers. App5 will use Remote Desktop IP Virtualization.
- Deploy 150 wireless access points (WAPs) that support Wi-Fi Protected Access 2 security running in Enterprise mode (WPA2-Enterprise).
- Migrate several users from contoso.com to lucernepublishing.com. The migrated users must continue to have access to the resources in the contoso.com forest.
- Open a new branch office that will have a read-only domain controller (RODC) in the contoso.com forest. The new branch office will connect to the Seattle office by using a WAN link and will have a direct connection to the Internet.

QUESTION 3

Your network consists of two Active Directory forests. The Active Directory forests are configured as shown in the following table. (Click the Exhibit)

Forest name	Forest functional level	Domain name	Domain functional level
contoso.com	Windows Server 2000	contoso.com	Windows Server 2008 R2
		company1.contoso.com	Windows Server 2008 R2
fabrikam.com	Windows Server 2003	fabrikam.com	Windows Server 2003
		company2.fabrikam.com	Windows Server 2008 R2

The contoso.com and fabrikam.com domains each contain one server that runs Active Directory Federation Services (AD FS).

Users in the company1.contoso.com domain require access to an application server in the company2.fabrikam.com domain. The application server is configured to allow only Kerberos authentication.

You need to ensure that users in the company1.contoso.com domain can access the application server in the company2.fabrikam.com domain.

What should you do first?

A. Create a forest trust between the contoso.com forest and the fabrikam.com forest.

B. Create an external trust between the contoso.com domain and the fabrikam.com domain.

C. Create an AD FS federation trust between the contoso.com forest and the fabrikam.com forest.

D. Create an external trust between the company1.contoso.com domain and the company2.fabrikam.com domain.

Correct Answer: A

QUESTION 4

A company has an Active Directory Domain Services (AD DS) forest. The forest has a root domain named contoso.com and a child domain named corp.contoso.com. All domain controllers run Windows Server 2003. The forest and domain functional levels are Windows Server 2003. You are planning to migrate only the corp.contoso.com domain to Windows Server 2008 R2 and utilize read-only domain controllers (RODCs).

You need to develop a plan to deploy the first RODC with the minimum number of changes to the AD DS environment.
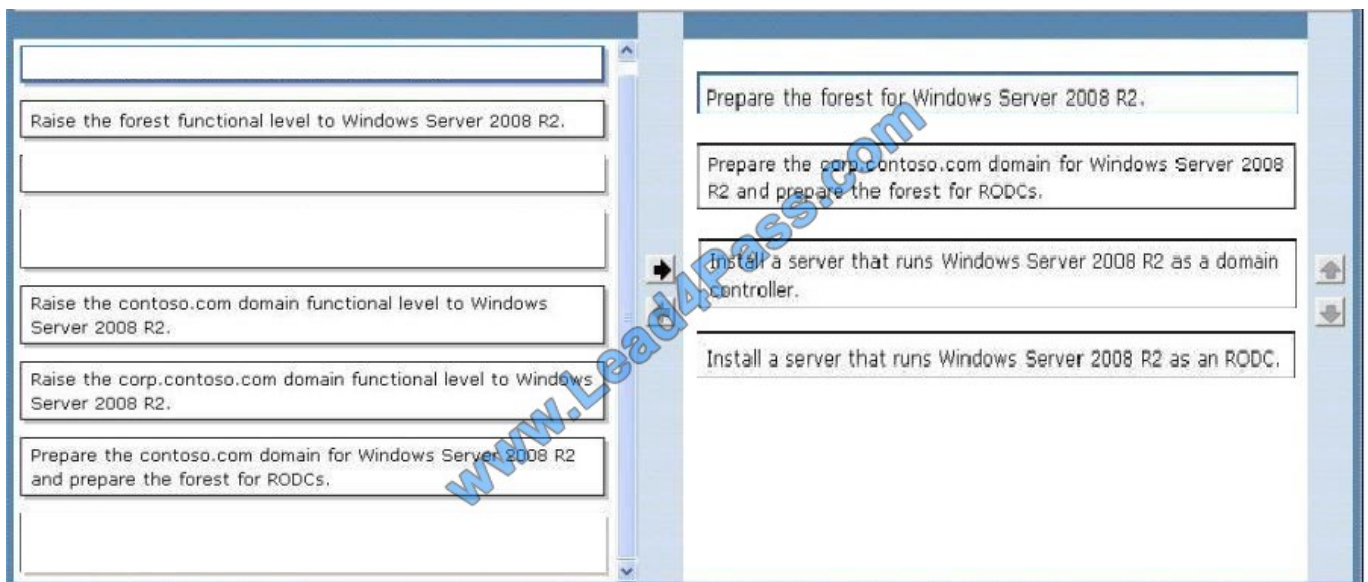

Which actions should you perform in sequence?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. (Use only actions that apply.)

Select and Place:

Correct Answer:

QUESTION 5

You need to recommend a public key infrastructure (PKI) solution that meets the company\\'s security requirements. What should you include in the recommendation?

A. Active Directory Federation Services (AD FS) and federated trusts

B. certificate deployment by using Group Policy objects (GPOs)

C. cross-certification

D. external trusts and realm trusts

Correct Answer: B

Security Requirements

Woodgrove Bank must meet the following secrity requirement.

Servers in contoso.com must be able to trust certificates issued by the CA of woodgroovebank.com

App1 must only be available to contoso users when the user are connected to the woodgroove bank network

Users in contoso.com must be able to automatically enroll for certificates from the CA of Woodgrove Bank.

Internal auditors must have full administrative right on all client computer in the finace department.

Only client computer that have Microsoft Forefont Endpoint Protection installed must be able to remotely connect to the Woodgrove Bank network.

Existing Environment

Active Directory Environment

The Woodgrove Bank network contains an Active Directory forest named woodgrovebank.com .The forest contains multiple demains and one Active Directory site. The functional level of the forest is Windows Server 2003

Each office has domain controllers for the forest root domain. Each office also contains domain controllers for at least one other domain.

The Woodgrove Bank network contains the folowing applications and servers:

A line-of-business application named App1

Server that run either Windows Server 2003 or Windows Server 2008.

Domain controllers in the main office run Windows Server 2003.

An enterprise root certification authority (CA) that runs Windows Server 2003. The certificate revocation ltst (CRL) is published to an internal Web site.

All client computers in cortoso.com run a 64-bit version of Windows 7

Security Model

Users in Woodgrove Bank's research department are required to use smart card authentication to log on to the network
