QUESTION 1

You have an Exchange organization. The Exchange servers in the organization are configured as shown in the following table.

Server name	Exchange version	Role
Server1	Exchange Server 2007	Client Access server
Server2	Exchange Server 2007	Hub Transport server
Server3	Exchange Server 2007	Mailbox server

You deploy a new Exchange Server 2010 Client Access server named Server4 and successfully update the required DNS records for Server4.

You need to ensure that all users on Server3 can successfully access their mailboxes by Using Exchange ActiveSync.

What should you do?

- A. On Server1, set the authentication type for the Microsoft-Server-ActiveSync virtual directory to NTLM.
- B. On Server1, set the authentication type for the Microsoft-Server-ActiveSync virtual directory to anonymous.
- C. From the Exchange Management Shell on Server4, run `New-ActiveSyncDeviceAccessRule -QueryString * -Characteristic DeviceModelAccessLevelAllow`.
- D. From the Exchange Management Shell on Server3, run `Set-ActiveSyncVirtualDirectory -Identity "Server3\Microsoft-Server-ActiveSync (default web site)" -BasicAuthentication:$true`.

Correct Answer: A

QUESTION 2

You have an Exchange Server 2010 organization.

A user named User1 connects to his mailbox using Microsoft Office Outlook. User1 reports that he is unable to send encrypted email messages to an external recipient named User2. You verify that User1 and User2 have email encryption

certificates. You need to ensure that User1 can send encrypted email messages to User2.

What should you do first?

- A. Instruct User2 to add a delegate.
- B. Instruct User2 to send a signed email message to User1.
- C. Instruct User1 to send a signed email message to User2.
- D. Instruct User1 to modify the sensitivity settings of the email message.

Correct Answer: B

QUESTION 3

You work as an Exchange Administrator for ABC Inc. The company has a Windows 2008 Active Directorybased network.

The management instructs you to prepare an Exchange organization. You decide to prepare the Active Directory schema and domains by using a computer running Windows Server 2008. Which of the following actions will you perform prior

to preparing the schema or domains?

- A. Run the Setup /PrepareLegacyExchangePermissions command on the Windows Server 2008 computer.
- B. Install the Active Directory management tools on the Windows Server 2008 computer.
- C. Install Windows Remote Management (WinRM) 2.0 on the Windows Server 2008 computer.
- D. Install Microsoft .NET Framework 3.5 Service Pack 1 (SP1) on the Windows Server 2008 computer.

Correct Answer: B

If Active Directory is not installed on the machine, this would be a necessity in the first instance.

QUESTION 4

Your company has a main office and a branch office.

All branch office administrators are members of a custom management role group. The role group is configured to allow members to manage recipients. The branch office administrators are also members of the Domain Admins security group.

The company has a hosted Exchange Server 2010 organization.

You discover that the branch office administrators can manage recipients in both offices.

You need to ensure that the branch office administrators can manage recipients in their assigned branch office only.

What should you do?

- A. Remove the branch office administrators from the Domain Admins group. Add the branch office recipients to the role group.
- B. Create a new management role entry for the role group.
- C. Create a management role assignment policy and associate the policy to the role group.
- D. Create a management scope and associate the scope to the role group. Set a recipient filter for the management scope.

Correct Answer: D

QUESTION 5

You have an Exchange Server 2010 organization. Your network contains two Active Directory sites named Site1 and Site2. Each site contains five Mailbox servers.

A Mailbox server named Server1 is in Site1. A Mailbox server named Server2 is in Site2.

You have a public folder named Folder1 that is replicated to Server1 and Server2.

Users in Site1 report that they cannot access Folder1 when Server1 is offline.

You need to ensure that all users can access Folder1 if Server1 is offline.

What should you do?

- A. Add Server1 to the public folder referrals for Site2.
- B. Add Server2 to the public folder referrals for Site1.
- C. Add Server1 and Server2 to a Client Access server array.
- D. Add Server1 and Server2 to a database availability group (DAG).

Correct Answer: B
