QUESTION 1

You have an Exchange Server 2010 organization.

You enable journaling in the organization.

You need to recommend a solution that prevents administrators from reading confidential e-mail messages sent between company executives.

What should you recommend?

- A. Deploy Active Directory Rights Management Services (AD RMS) templates and create Outlook Protection Rules.
- B. Deploy Active Directory Rights Management Services (AD RMS) templates and create Transport Protection Rules.
- C. Deploy an X.509 certificate from an enterprise certification authority (CA) to each executive. Instruct the executive to connect to the Exchange servers by using SMTP over TLS.
- D. Deploy an X.509 certificate from a trusted third-party certification authority (CA) to each executive. Instruct the executive to encrypt e-mail messages by using Security/Multipurpose Internet Mail Extensions (S/MIME).

Correct Answer: D

QUESTION 2

You have an Active Directory forest.

You plan to deploy an Exchange Server 2010 organization that contains the following servers:

Two Edge Transport servers

Two Hub Transport servers

You need to recommend changes to the organization to ensure that e-mail messages can be sent to the Internet if a single transport server fails.

What should you recommend?

- A. Configure shadow redundancy for the Hub Transport servers.
- B. Implement failover clustering on both Hub Transport servers.
- C. Configure both Edge Transport servers as source servers for a Send connector.
- D. Create one mail exchange (MX) record and one SRV record for each Edge Transport server in the internal DNS zone.

Correct Answer: C

Send connectors create a logical connection to remote e-mail systems and are responsible for outbound transmission of e-mail messages. If you use the EdgeSync process, it will configure the Send connectors required for mail flow to the Internet and to the Edge Transport servers in your Microsoft Exchange Server 2010 organization. If your organization requires a Send connector with specific configuration options, or if you don't use the EdgeSync process, you must

manually configure Send connectors.

QUESTION 3

You have an Exchange Server 2010 organization. You need to recommend a storage solution that meets the following requirements:

Provides users with an alternate location for storing e-mail messages Provides users with access to the alternate location by using Outlook Web App (OWA)

What should you recommend?

- A. journal rules
- B. managed folders
- C. personal archives
- D. personal folders (.pst)

Correct Answer: C

QUESTION 4

You have an Exchange Server 2010 organization. The organization has a Hub Transport server that has anti-spam agents installed. You plan to delegate the administration of the organization to a group named Security Administrators.

You need to ensure that members of Security Administrators can manage anti-spam setting in the organization. The solution must minimize the amount of permissions assigned to Security Administrators.

Which management role group should you assign?

- A. Hygiene Management
- B. Organization Management
- C. Records Management
- D. Server Management

Correct Answer: A

The Hygiene Management management role group is one of several built-in role groups that make up the Role Based Access Control (RBAC) permissions model in Microsoft Exchange Server 2010. Role groups are assigned one or more management roles that contain the permissions required to perform a given set of tasks.

The members of a role group are granted access to the management roles assigned to the role group. For more information about role groups, see Understanding Management Role Groups.

Users who are members of the Hygiene Management role group can configure the antivirus and anti-spam features of Exchange Server 2010. Third-party programs that integrate with Exchange 2010 can add service accounts to this role group to grant those programs access to the cmdlets required to retrieve and configure the Exchange configuration.

QUESTION 5

You have Exchange Server 2003 organization. The organization contains a front end server named FE1 and a back end server accessible from the Internet by using mail.contoso.com.

You plan to transition the organization to Exchange Server 2010. You will deploy a Mailbox server named MIX1 and a Client Access server named CAS1. Users will access Outlook Web Access and Outlook Web App (OWA) by using the URL. <https://mail.contoso.com>.

You need to recommend a DNS configuration for the external name of mail.contoso.com.

Which server should be associated with the name mail.contoso.com?

- A. BE1
- B. CAS1
- C. FE1
- D. MIX1

Correct Answer: B
