QUESTION 1

Start of repeated scenarioYou are an enterprise desktop support technician for Humongous Insurance. Active Directory ConfigurationThe company has two offices named Office1 and Office2. The network contains an Active Directory forest named humongousinsurance.com. An Active Directory site exists for each office. The sites are named Site1 and Site2. Server ConfigurationAll servers run Windows Server 2008 R2 and are joined to the domain. The relevant servers are configured as shown in the following table. The corporate security policy states that all domain controllers must have only the following roles. AD DSDNS serverDHCP server Network ConfigurationSite1 and Site2 connect to each other by using a WAN link. Client Computer ConfigurationAll client computers run Windows 7 Enterprise and are members of the domain. Some client computers are portable computers and some are desktop computers. The computers do not support hardware virtualization. All computers are configured to receive Windows Updates from WSUS1. Remote Access ConfigurationUsers can connect to NPAS1 from the Internet by using all of the VPN protocols that are supported by Windows Server 2008 R2. Fabrikam, Inc. is a customer of Humongous Insurance. Several Humongous Insurance users work at the Fabrikam office and access resources on the Humongous Insurance network by using direct VPN connections to NPAS1. Fabrikam contains several wireless access points. Application ConfigurationAll computers in the finance department run a custom application suite named App1. Several users in the sales department install an application named App2. App2 runs as a service and logs on by using the credentials of the user who installed the application. **End of repeated scenario** Each day, 100 users in Office2 download a 5-MB product catalog file from a share on Server1. The network administrator reports that the downloads cause an excessive load on the WAN link between Office1 and Office2. You need to recommend a solution to minimize WAN utilization. The solution must not require that additional servers be deployed. What should you recommend?

Server name	Site	Role
DC1	Site1	Active Directory Domain Services (AD DS), DHCP server, DNS server
DC2	Site2	AD DS, DHCP server, DNS server
NPAS1	Site1	Network Policy and Access Services (NPAS) server
WSUS1	Site1	Windows Server Update Services (WSUS) server
Server1	Site1	File server

- A. BranchCache in distributed cache mode
- B. BranchCache in hosted cache mode
- C. Distributed File System Replication (DFSR)
- D. File Server Resource Management (FSRM)

Correct Answer: A

QUESTION 2

You have an answer file for a Windows 7 installation. You need to perform an unattended installation of Windows 7 by using the answer file. You must achieve this goal by using the minimum amount of administrative effort. What should you do?

- A. Name the answer file autounattend.xml and save it to a USB disk. Start the computer from the Windows 7 DVD.

- B. Name the answer file autounattend.ini and save it to a USB disk. Start the computer from the Windows 7 DVD.
- C. Name the answer file unattend.xml and save it to a USB disk. Start the computer from the Windows Preinstallation Environment (Windows PE).
- D. Name the answer file unattend.txt and save it to a USB disk. Start the computer from the Windows Preinstallation Environment (Windows PE).

Correct Answer: A

QUESTION 3

You have a stand-alone computer named Computer1 that runs Windows 7. Several users share Computer1. You need to prevent all users who are members of a group named Group1 from running Windows Media Player. All other users must be allowed to run Windows Media Player. You must achieve this goal by using the least amount of administrative effort. What should you do?

- A. From Software Restriction Policies, create a path rule.
- B. From Software Restriction Policies, create a hash rule.
- C. From Application Control Policies, create the default rules.
- D. From Application Control Policies, create an executable rule.

Correct Answer: D

QUESTION 4

You work as a desktop technician at ABC.com. The ABC.com network consists of a single Active Directory domain named ABC.com. All servers on the network run Windows Server 2008. All client computers run Windows 7 Enterprise.

You want to install Windows 7 on a new computer. You have a virtual hard disk (VHD) that contains a Windows 7 Enterprise installation.

You configure the computer to start from the VHD.

How can you configure the Windows 7 installation to run the out-of-box-experience (OOBE) portion of Windows Setup when the computer is started from the VHD?

- A. Copy boot.wim from the Windows 7 installation media to the VHD.
- B. Copy install.wim from the Windows 7 installation media to the VHD.
- C. Start the computer using Windows PE then run Diskpart.exe.
- D. Use ImageX to mount the Windows 7 image and apply install.wim from the Windows 7 installation media to it.
- E. Use ImageX to mount the Windows 7 image and apply boot.wim from the Windows 7 installation media to it.

Correct Answer: D

**QUESTION 5**

Your network consists of an Active Directory domain named contoso.com. You have a computer named computer1.contoso.com. Your network is configured to use only IPv6. You need to request that a DNS record be created to enable users

to connect to your computer by using the name dev.contoso.com.

Which type of record should you request?

- A. A
- B. AAAA
- C. HINFO
- D. NAPTR

Correct Answer: B
