QUESTION 1

Your company has 1,000 client computers. Each client computer has 1 GB of RAM.

You are planning to deploy Windows 7 Enterprise.

You need to design a zero-touch deployment strategy to increase the number of client computers that can be imaged at one time.

What should you do?

- A. Increase the amount of RAM on the client computers.
- B. Change from unicast to multicast deployment of images.
- C. Change from multicast to unicast deployment of images.
- D. Decrease the trivial file transfer protocol (TFTP) block size on the TFTP server.

Correct Answer: B

Performing Multicast Deployments In order to deploy an image using multicasting instead of unicasting, you must first create a multicast transmission. Multicast transmissions make the image available for multicasting, which enables you to deploy an image to a large number of client computers without overburdening the network. When you deploy an image using multicasting, the image is sent over the network only once, which can drastically reduce the amount of network bandwidth that is used. [http://technet.microsoft.com/en-us/library/dd637994\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/dd637994(v=ws.10).aspx)

QUESTION 2

You are planning to deploy Windows 7 Enterprise and several custom applications. You create a custom Windows 7 Enterprise image. You need to validate that the custom applications will run after the deployment. What should you do?

- A. Use ImageX with the check option to mount the image.
- B. Mount the custom image by using the Deployment Image Servicing and Management (DISM) tool.
- C. Deploy the custom image, and then run the sigverif.exe command.
- D. Deploy the custom image to a Virtual Hard Disk (VHD), and then boot from the VHD.

Correct Answer: D

The only way to check custom application is C in question, as need to load image to VHD or real PC, then boot from VHD or PC to windows, then run the customer application in windows.

QUESTION 3

You are planning to deploy Windows 7.

You have a custom line-of-business application that is not compatible with Windows 7.

You need to design a solution that allows the application to run.

What should you do?

- A. Use the Windows Compatibility Evaluator.
- B. Use the Setup Analysis Tool.
- C. Use the Compatibility Administrator.
- D. Use the Update Compatibility Evaluator.

Correct Answer: C

The Compatibility Administrator tool can help you to resolve many of your compatibility issues by enabling the creation and the installation of application mitigation packages (shims), which can include individual compatibility fixes, compatibility modes, and AppHelp messages. The flowchart in Figure illustrates the steps required while using the Compatibility Administrator to create your compatibility fixes, compatibility modes, and AppHelp messages.
<http://sourcedaddy.com/windows-7/using-the-compatibility-administrator.html>

QUESTION 4

You are installing a new third-party application to all the Windows 7 client workstations that your company has deployed.

You need to monitor all of the actions taken by the application installer.

Which application should you use?

- A. Update Compatibility Evaluator
- B. Setup Analysis Tool
- C. Windows Compatibility Evaluator
- D. Compatibility Administrator

Correct Answer: D

QUESTION 5

Your company has 1,000 client computers that run Windows 7 Enterprise.

You need to ensure that users cannot bypass or disable Internet Explorer logging.

What should you do?

- A. Set the Disable the Advanced Page state to Enabled, and set the Turn off InPrivate Browsing state to Enabled.
- B. Set the Turn off InPrivate Filtering state to Enabled, and set the Disable the General Page state to Enabled.
- C. Set the Turn off InPrivate Browsing state to Enabled, and set the Disable the General Page state to Enabled.

D. Set the Disable the General Page state to Enabled, and set the Disable the Advanced Page state to Enabled.

Correct Answer: C

InPrivate Browsing in Internet Explorer 8 helps prevent one's browsing history, temporary Internet files, form data, cookies, and usernames and passwords from being retained by the browser, leaving no easily accessible evidence of browsing

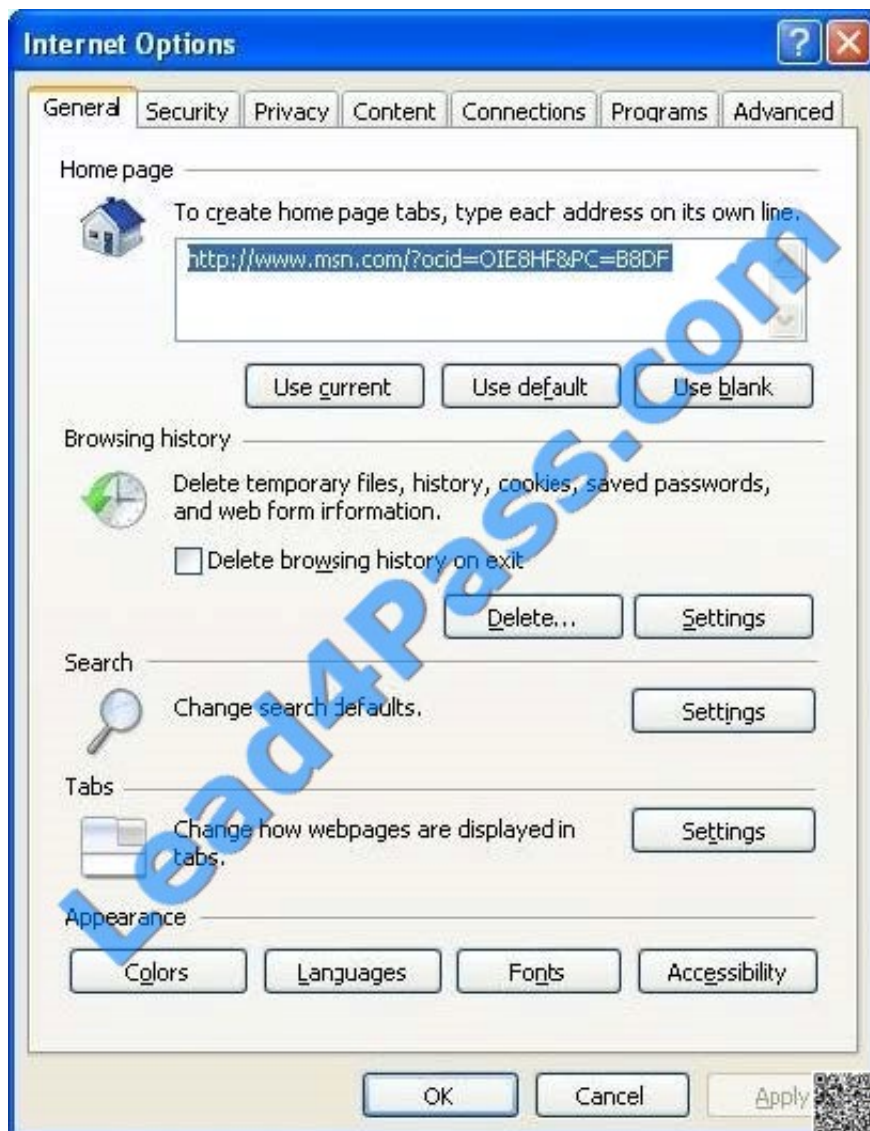

or search history.

http://en.wikipedia.org/wiki/Internet_Explorer_8

hints:

run IE InPrivate Browsing will not keep any history or logging.

General Page able to clear IE history
