QUESTION 1

Your company has 1,000 client computers that run Windows 7. The company uses several custom line-of-business applications that are not compatible with Windows 7.

You need to distribute a Microsoft Enterprise Desktop Virtualization (MED-V) virtual machine (VM) image that includes the custom applications to all Windows 7 client computers.

What should you do?

- A. Mount the VM image from the MED-V workspace.
- B. Deploy the VM image from the MED-V server.
- C. Deploy the VM image by using Windows Deployment Services (WDS).
- D. Deploy the VM image by using Windows Server Update Services (WSUS).

Correct Answer: B

QUESTION 2

You are planning to deliver VDI by using the companys virtualization infrastructure.

You need to ensure that VDI users are always reconnected to the same VDI session.

What should you recommend?

- A. Deploy the App-V desktop client.
- B. Add the VmHostAgent role service.
- C. Deploy the App-V Sequencer.
- D. Install Windows Server 2008 R2 Datacenter with the Hyper-V role.

Correct Answer: B

QUESTION 3

You deploy Windows 7 to the computers that are used by your companys Web developers. All Web developer user accounts are in a single organizational unit (OU).

Internet Explorer is blocking pop-up windows for multiple internal Web applications that are hosted on different servers.

You need to use Group Policy to ensure that Internet Explorer does not block pop-up windows for internal Web applications.

What should you do?

- A. Enable Compatibility View in Internet Explorer.

- B. Add each server to the Intranet zone.
- C. Add each server to the Trusted Sites zone.
- D. Set the default security setting in Internet Explorer to Medium.

Correct Answer: B

Pop-up Blocker features

Pop-up Blocker is turned on by default. There are restrictions on the size and position of pop-up windows, regardless of the Pop-up Blocker setting. Pop-up windows cannot be opened larger than or outside the viewable desktop area. For

more information, see "Windows Restrictions" in this document.

When this functionality is enabled, automatic and background pop-up windows are blocked, but windows that are opened by a user click will still open in the usual manner. Note that sites in the

Trusted Sites and Local

Intranet zones do not have their pop-up windows blocked by default, as they are considered safe. This setting can be configured in the Security tab in Internet Options. [http://technet.microsoft.com/en-us/library/cc784600\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/cc784600(v=ws.10).aspx) hints:

internal web , so i choose intranet zones.

Local Intranet Zone

By default, the Local Intranet zone contains all network connections that were established by using a Universal

Naming Convention (UNC) path, and Web sites that bypass the proxy server or have names that do not include periods (for example, <http://local>), as long as they are not assigned to either the Restricted Sites or Trusted Sites zone. The

default security level for the Local Intranet zone is set to Medium (Internet Explorer 4) or Medium-low (Internet Explorer 5 and 6). Be aware that when you access a local area network (LAN) or an intranet share, or an intranet Web site by

using an Internet Protocol (IP) address or by using a fully qualified domain name (FQDN), the share or Web site is identified as being in the Internet zone instead of in the Local intranet zone.

Trusted Sites Zone

This zone contains Web sites that you trust as safe (such as Web sites that are on your organization's intranet or that come from established companies in whom you have confidence). When you add a Web site to the Trusted Sites zone, you

believe that files you download or that you run from the Web site will not damage your computer or data. By default, there are no Web sites that are assigned to the Trusted Sites zone, and the security level is set to Low.

QUESTION 4

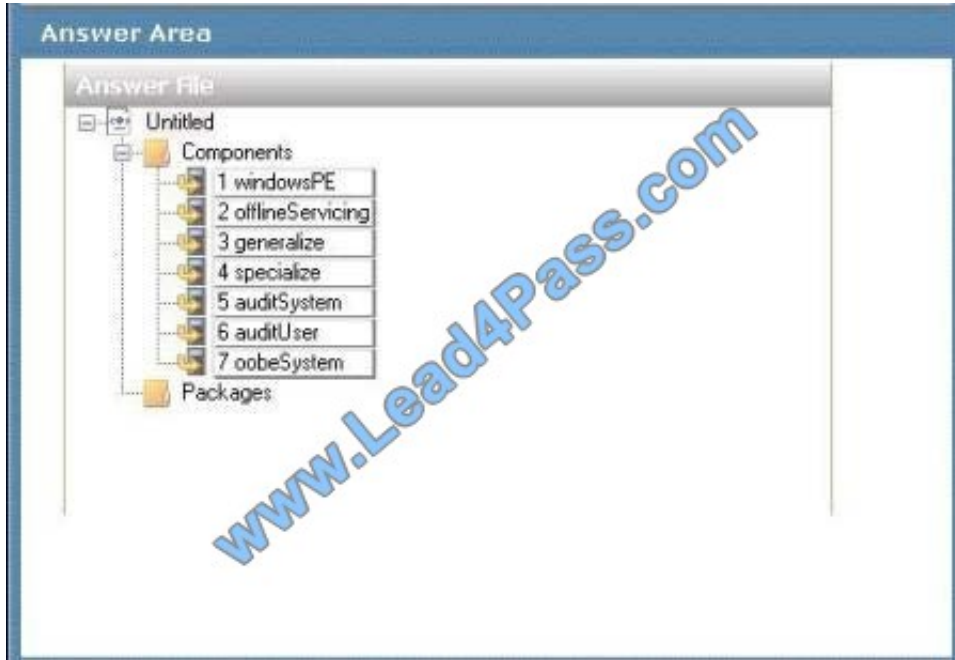

You are designing a Windows 7 Enterprise custom image. You create an autounattend.xml file by using Windows System Image Manager (SIM). This file will be used when the image is deployed.

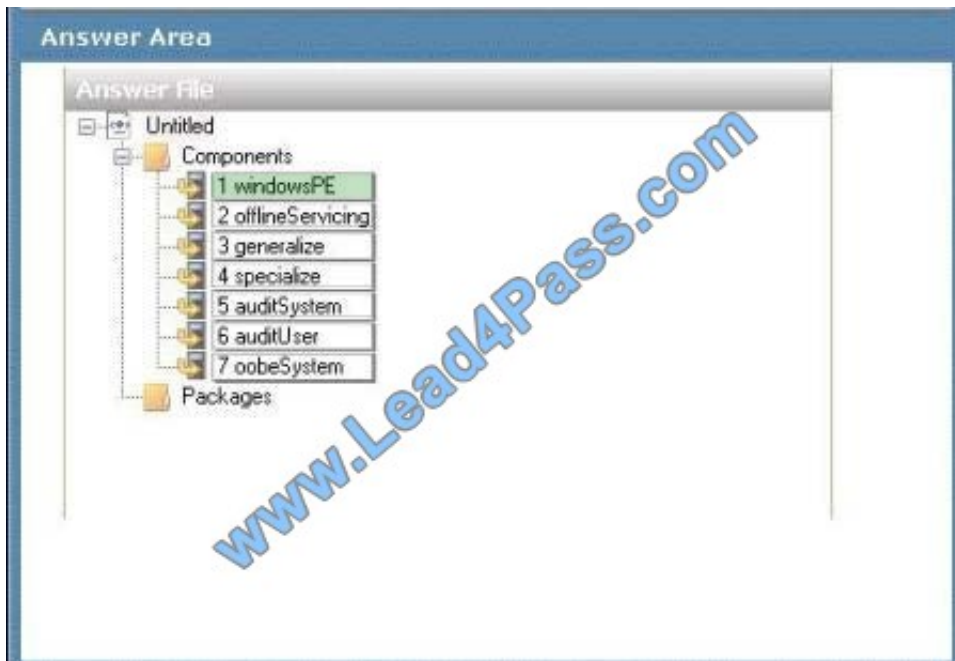

You are planning to install Windows 7 on a second hard disk in a computer. You configure the DiskID setting.

You need to select the configuration pass where you will add the DiskID setting.

Which option should you select? To answer, select the appropriate setting or settings in the work area.

Correct Answer:

QUESTION 5

You deploy Windows 7 and several custom Internet Explorer add-ons to 1,000 client computers. Internet Explorer closes when users run a specific Web application. You need to find out whether an add-on is the cause of the problem. What should you do?

- A. Use Group Policy to disable the Programs tab in Internet Explorer for all client computers.
- B. Use Group Policy to turn on Internet Explorer 7 Standards mode.
- C. Start Internet Explorer in No Add-ons mode.
- D. Reset all Internet Explorer security zones to the default levels.

Correct Answer: C
