QUESTION 1

You administer Windows 8.1 client computers in your company network. The company has an Active Directory Domain Services (AD DS) domain. The network uses a DHCP server.

You want to assign a static dynamic host configuration protocol (DHCP) reservation for a client computer.

You need to identify the media access control (MAC) address of the client computer.

Which command should you use?

- A. `ipconfig /allcompartments /all`
- B. `ipconfig /renew`
- C. `ipconfig /all`
- D. `ipconfig /flushdns`

Correct Answer: C

QUESTION 2

A company has client computers that run Windows 8.

When a user tries to print from his portable client computer while connected to the corporate network, he discovers that the default printer is set to his home printer instead of to the office printer.

You need to ensure that the default printer for the computer is the office printer when the computer is connected to the corporate network and the user's home printer when the computer is connected to his home network.

What should you do on the portable computer?

- A. In the printer properties of the corporate printer, configure the active port with the correct TCP/IP settings for the printer.
- B. Install the corporate printer and set it as the default printer. Then add the home printer to the homegroup settings.
- C. Connect to the home network and choose Connect from the shared printer object context menu. Then connect to the corporate network and choose Connect from the shared printer object context menu.
- D. Set a default printer for each network.

Correct Answer: D

QUESTION 3

A desktop computer that runs Windows 8 downloads updates but does not install them. The computer is connected to the corporate network by using a wired network connection.

You need to ensure that the computer automatically installs updates.

What should you do?

- A. Set the wired network connection to non-metered.
- B. Configure the Automatic Maintenance setting.
- C. Enable the Reschedule Automatic Updates scheduled installations Group Policy setting.
- D. Set the wired network connection to metered.

Correct Answer: B

QUESTION 4

A client computer that runs Windows 8 has two hard disk drives: a system drive and a data drive.

You are preparing to back up the computer prior to installing a developing software product.

You have the following requirements:

The system disk that is part of the backup must be mountable from within Windows.

The system disk that is part of the backup must be bootable. The backup must be viable to restore in the event of a hard disk failure. The backup must contain data from both hard disk drives.

You need to select a backup method.

Which method should you use?

- A. System repair disk
- B. Storage pool
- C. System image
- D. File History

Correct Answer: C

QUESTION 5

A client laptop runs Windows 7 Professional and a custom application. The custom application is compatible with Windows 8.

You plan to migrate user settings and data from the client laptop to a new tablet PC that runs Windows 8 Pro. You install the User State Migration Toolkit (USMT) on a USB flash drive.

You need to ensure that the custom application settings are applied to the tablet PC after the migration is complete.

Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

- Run the **loadstate** command on the tablet PC.
- Run the **loadstate** command on the laptop.
- Run the **scanstate** command on the laptop.
- Run the **scanstate** command on the tablet PC.
- Uninstall the custom application from the laptop.
- Install the custom application on the tablet PC.

Correct Answer:

-
- Run the **loadstate** command on the laptop.
-
- Run the **scanstate** command on the tablet PC.
- Uninstall the custom application from the laptop.
-

- Run the **scanstate** command on the laptop.
- Install the custom application on the tablet PC.
- Run the **loadstate** command on the tablet PC.
