QUESTION 1

A company has 100 client computers that run Windows Vista. The company uses several custom applications.

The company plans to replace the Windows Vista computers with new computers that run Windows 8. You need to establish which of the currently installed applications will work on Windows 8.

What should you do?

- A. Install and run the Microsoft Deployment Toolkit.
- B. Install and run the Windows App Certification Kit.
- C. Install and run the Windows Application Compatibility Toolkit.
- D. Install and run the Microsoft Assessment and Planning Toolkit.

Correct Answer: C

The Microsoft Application Compatibility Toolkit (ACT) helps you determine whether the applications, devices, and computers in your organization are compatible with versions of the Windows operating system. By using ACT, you can obtain compatibility information from Microsoft and software vendors, identify compatibility issues within your own organization, and share compatibility ratings with other ACT users. The tools in ACT help you analyze and mitigate compatibility issues before you deploy a version of Windows to your organization.

QUESTION 2

Your network contains an Active Directory domain. All client computers run Windows 8.1 Enterprise and are located in an organizational unit (OU) named WindowsSComputers.

The network has Windows Server Update Services (WSUS) installed. All of the computers are configured to receive updates from WSUS.

The network administrator creates a new computer group named Win8Computers in WSUS.

You need to ensure that the Windows 8.1 computers receive all of the updates that are assigned to the WinSComputers computer group.

Which Group Policy setting should you configure? (To answer, select the appropriate setting in the answer area.)

Hot Area:

Setting	State	Comment

Extended Standard
16 setting(s)

Use the WSUS console to specify whether you will use client-side or server-side targeting. With server-side targeting, you manually add each computer to its group. With client-side targeting, you automatically assign the computers by using Group Policy or registry keys. [http://technet.microsoft.com/en-us/library/dd939829\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/dd939829(v=ws.10).aspx)

QUESTION 3

You support computers that run Windows 8 Pro.

Your company recently purchased 200 new desktop computers. Company policy requires that the desktop computers include a recovery partition. The partition must contain a bootable image that includes support for incoming Remote

Desktop connections.

You need to configure the desktop computers to comply with company policy.

Which four actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Select and Place:

	Answer Area
Use the boot.wim file to create a bootable partition.	
Extract the install.wim file.	
Install WinRE to the recovery partition.	
Extract the boot.wim file.	
Replace the recovery partition on the target computers.	
Mount the install.wim file.	
Create a customized Microsoft Diagnostics and Recovery Tool (DaRT) ISO image file.	

Correct Answer:

	Answer Area
	Create a customized Microsoft Diagnostics and Recovery Tool (DaRT) ISO image file.
Extract the install.wim file.	Extract the boot.wim file.
Install WinRE to the recovery partition.	Use the boot.wim file to create a bootable partition.
	Replace the recovery partition on the target computers.
Mount the install.wim file.	

Note:

After you have finished running the Microsoft Diagnostics and Recovery Toolset (DaRT) 8.0 Recovery Image wizard and created the recovery image, you can extract the boot.wim file from the ISO image file and deploy it as a recovery

partition in a Windows 8 image. A partition is recommended, because any corruption issues that prevent the Windows operating system from starting would also prevent the recovery image from starting.

Reference: [How to Deploy the DaRT Recovery Image as Part of a Recovery Partition](#)

[How to Deploy the DaRT Recovery Image as Part of a Recovery Partition](#)

Reference:

<http://technet.microsoft.com/en-us/library/jj713318.aspx>

After you have finished running the Microsoft Diagnostics and Recovery Toolset(DaRT) 8.0 Recovery Image wizard and created the recovery image, you can extract the boot.wim file from the ISO image file and deploy it as a recovery partition

in a Windows 8 image.

A partition is recommended, because any corruption issues that prevent the Windows operating system from starting would also prevent the recovery image from starting.

To deploy DaRT in the recovery partition of a Windows 8 image 1. Create a target partition in your Windows 8 image that is equal to or greater than the size of the ISO

image file that you created by using the DaRT 8.0 Recovery Image wizard.

* The minimum size required for a DaRT partition is 500MB to accommodate the remote connection functionality in DaRT.

2. Extract the boot.wim file from the DaRT ISO image file.

Using your company's preferred method, mount the ISO image file that you created on the Create Startup Image page.

Open the ISO image file and copy the boot.wim file from the \sources folder in the mounted image to a location on your computer or on an external drive.

3. Use the boot.wim file to create a bootable recovery partition by using your company's standard method for creating a custom Windows RE image.

4. For more information about how to create or customize a recovery partition, see Customizing the Windows RE Experience.

5. Replace the target partition in your Windows 8 image with the recovery partition.

QUESTION 4

You support laptops that run Windows 8 Enterprise. Microsoft BitLocker Administration and Monitoring (MBAM) are deployed on your network on a server named SERVER1. Company policy requires that laptops with MBAM client installed prompt users to enable BitLocker within 2 hours of being started.

You need to make changes to the Configure MBAM Services Group Policy settings.

Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. Set Select BitLocker Recovery Information to store to Recovery password and key package.
- B. Set Enter client checking status frequency (in minutes) to 120.
- C. Set MBAM Recovery and Hardware service endpoint to SERVER1.
- D. Set Enter status reporting frequency (in minutes) to 120.
- E. Set MBAM Status reporting endpoint to SERVER1
- F. Set Select BitLocker Recovery Information to store to Recovery password only.

Correct Answer: BC

QUESTION 5

You administer a company network that includes a wireless network infrastructure and computers that run Windows 8

Enterprise. You are planning to add a guest wireless network.

You need to collect information about nearby wireless networks, including their encryption methods.

Which command should you include in the batch file?

- A. Netsh wlan set autoconfig enabled=no interface="Wireless Network Connection"
- B. ipconfig /allcompartments
- C. netsh wlan show networks
- D. netstat -a
- E. Get-WmiObject win32_networkadapterconfiguration -Filter \\ipenabled = "true"\'
- F. netsh wlan show hostednetwork

Correct Answer: C
