QUESTION 1

You use a Windows 8.1 tablet. The tablet receives Windows Update updates automatically from the Internet.

The tablet has Wi-Fi and is connected to a 3G mobile broadband Wi-Fi hot spot.

You need to minimize data usage while connected to this hot spot.

What should you do?

- A. Turn on Airplane Mode.
- B. Disable File and Print Sharing for mobile broadband connections.
- C. Configure the interface metric of IP settings for Wi-Fi connection as 1.
- D. Edit the Inbound Rule of Windows Firewall, and then disable Internet Control Message Protocol (ICMP) traffic.
- E. Configure the broadband connection as a metered network.

Correct Answer: E

You can limit the bandwidth used by the broadband connection by configuring it as a metered network. A metered network is a network where data downloaded is `metered` (measured) and you are charged for the amount of data downloaded.

Setting a connection as metered prevents Windows from automatically using bandwidth in a number of ways including the following:

Disables automatic downloading of Windows updates: Windows won't automatically download updates from Windows Update on metered Internet connections. You'll get a "Download" button you can click whenever you want to install updates.

Disables automatic downloading of app updates: The Windows Store won't automatically download updates for your installed "Store apps" on metered connections, either. Desktop apps like Chrome, Firefox, and others will continue updating

themselves normally.

Tiles may not update: Microsoft says that the live tiles on your Start menu or Start screen "may" stop updating on a metered connection:

QUESTION 2

You have a computer named Computer1 that runs Windows 10.

You need to register Computer1 with Microsoft Intune.

What should you do?

- A. From Accounts in the Settings app, click enroll in to device management.

- B. From a command prompt, run the djoin command and specify the /psite parameter.
- C. From System in Control Panel, modify the domain membership.
- D. From Accounts in the Settings app, add a Microsoft account.

Correct Answer: A

<http://henkhoogendoorn.blogspot.co.za/2016/04/enroll-in-to-device-management-in.html>

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

While performing maintenance on a computer, you open Indexing Options, and then you click Pause.

You complete the computer maintenance.

You need to resume indexing.

Solution: From the Services console, you restart the Storage Service service.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 4

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario

Your network contains a single Active Directory domain named adatum.com. The network contains five servers configured as shown in the following table.

Server name	Domain/workgroup	Role
DC1	Adatum.com	Domain controller
DC2	Adatum.com	Domain controller
Server1	Adatum.com	Member server
Server2	Adatum.com	Member server
Test_Server	Workgroup	File server

All of the servers run Windows Server 2012 R2.

Test_Server has a shared folder named ShareA. Only local users have permissions to ShareA.

The network contains a mainframe computer that is administered by using the Telnet protocol.

The domain contains four client computers configured as shown in the following table.

Computer name	Primary user
Computer1	User1
Computer2	User2
Computer3	User3
Computer4	User4

All of the client computers run the 64-bit version of Windows. User3 frequently accesses ShareA. Remote Desktop is enabled on Computer4. Your company identifies the following requirements.

- Ensure that you can test unsigned device drivers on Computer1
- Enable Credential Guard on Computer2.
- Run commands and cmdlets remotely on computer2.
- Configure User Account control (UAC) on Computer3 to prompt administrators for credentials when elevated privileges are required.
- Ensure that User1 can view and interact with a desktop session of User3.
- Ensure that User2 can use Telnet to manage the mainframe.
-

Ensure that User4 can use Remote Desktop to access Computer4 remotely.

End of repeated scenario.

You need to meet the requirement for administering Computers remotely.

Which remote management technology should you use?

A.

Windows PowerShell remoting

B.

Telnet

C.

C.Ps Exec

D.

Remote Desktop

Correct Answer: B

QUESTION 5

You have a computer named Computer1 that runs Windows 10.

Computer1 is infected by a virus.

You fail to access the Settings app on Computer1 due to the virus.

You need to restart the computer and ensure that Computer1 displays the advanced startup options when the computer restarts.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

A. From Windows PowerShell, run `Restart-Computer Computer1 - Wait - For PowerShell`.

B. From System Configuration select safe boot select minimal, and then click Restart from the Start menu.

C. From system Configuration, select selective startup, and then click Restart from the start menu.

D. From a command prompt, run `shutdown.exe /r/o`.

E. From Power on the start menu, hold the SHIFT key while you click Restart.

Correct Answer: DE
