QUESTION 1

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise. All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the sales department is named Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

View the Upgrade Readiness data of all the client computers.

Deploy App1 to the client computers in the marketing department.

Deploy App2 to the client computers in the human resources (HR) department.

Monitor the usage of App3.

Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.

Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

You need to create the DNS record in adatum.com for the cloud-based distribution point.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You enroll several Apple iOS devices and deploy compliance policies.

One of the devices is marked as noncompliant.

You need to retrieve the logs from the device.

Solution: You open the Company Portal app, shake the device, and then tap Send Diagnostic Report when the diagnostics alert appears.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You have a support technician named User1.

Your company purchases 300 Apple iPhones.

You need to ensure that User1 can enroll the iPhones.

Solution: From the Configuration Manager console, you assign the Infrastructure Administrator security role to User1.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 4

You have a deployment of System Center Configuration Manager (Current Branch).

You use Configuration Manager to deploy Windows 10.

You discover that newly deployed images of Windows 10 are missing several Windows 10 updates.

When you attempt to deploy the updates by using the Schedule Updates Wizard, the process fails, and you receive the following error message: "Failed to apply one or more updates."

Which log file should you view to get additional information about the failure?

A. ScanAgent.log

B. UpdatesHandler.log

- C. OfflineServicingMgr.log
- D. UpdatesDeployment.log
- E. WUAHandler.log

Correct Answer: C

QUESTION 5

You have a deployment of System Center Configuration Manager (Current Branch). The Install Behavior for applications feature is enabled.

You have a line-of-business application named App1. Version 1.0 of App1 is deployed currently.

You need to upgrade App1 to version 2.0. Version 2.0 must be prevented from installing if App1.exe is running.

What should you do?

- A. Create a virtual application for version 2.0 of App1. Create a detection method for App1.exe.
- B. Create an application for version 2.0 of App1. Modify the Deployment Types and the Install Behavior settings.
- C. Modify the Deployment Types and the Install Behavior settings for version 1.0 of App1.
- D. Create a virtual application for version 1.0 of App1. Create a detection method for App1.exe.

Correct Answer: C
