QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10.

On Server1, you have the following zone configuration.

| ZoneName | ZoneType | IsAutoCreated | IsDsIntegrated | IsReverseLookupZone | IsSigned |
|--------------------|-----------|---------------|----------------|---------------------|----------|
| _msdcs.contoso.com | Primary | False | True | False | False |
| adatum.com | Forwarder | False | False | False | False |
| contoso.com | Primary | False | True | False | False |
| fabrikam.com | Primary | False | False | False | True |
| TrustAnchors | Primary | False | True | False | False |

You have the following subnets defined on Server1.

| Name | IPV4Subnet | IPV6Subnet |
|---------|-------------------|------------|
| Subnet1 | {10.0.0.0/24} | |
| Subnet2 | {10.0.1.0/24} | |
| Subnet3 | {192.168.15.0/24} | |
| Subnet4 | {172.16.1.0/24} | |

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4. Server1 must resolve queries from all other DNS clients.

Solution: From the Security Setting of each zone on Server1, you modify the permissions.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 2

Is the following statement TRUE or FALSE?

You can use SLB with a VLAN-based network for DIP VMs connected to a SDN Enabled Hyper-V Virtual Switch.

- A. FALSE
- B. TRUE

Correct Answer: B

QUESTION 3

HOTSPOT

Your network contains an Active Directory forest named contoso.com. The forest has three sites named Site1, Site2 and Site3.

Distributed File System (DFS) for the forest is configured as shown in the exhibit.

The forest contains a server named Server2 that hosts the DFS namespace. \\Contoso.com\Namespace1\Folder2 has the following configuration.

```
State : Online
Flags : Insite Referrals
Path : \\contoso.com\namespace1\folder2
TimeToLiveSec : 1800
Description :
NamespacePath : \\contoso.com\namespace1\folder2
TimeToLive : 1800
PSComputerName :
CimClass : Root/Microsoft/Windows/dfs:MSFT_DfsNamespaceFolder
CimInstanceProperties : (Description, Flags, NamespacePath, State...)
CimSystemProperties : Microsoft.Management.Infrastructure.CimSystemProperties
```

\\Contoso\Namespace1\Folder2 has the targets configured as shown in the following table.

| Path | Site | Referral status |
|-------------------|-------|-----------------|
| \\Server1\Folder2 | Site1 | True |
| \\Server2\Folder2 | Site2 | False |
| \\Server3\Folder2 | Site2 | True |

For each of the following statement, Select Yes if Statement is true. Otherwise, select No.

Hot Area:

Answer Area

| Statements | Yes | No |
|--|-----------------------|-----------------------|
| If users from Site1 connect to \\contoso.com\Namespace\Folder2, the users will always be redirected to Server1. | <input type="radio"/> | <input type="radio"/> |
| If users from Site2 connect to \\contoso.com\Namespace\Folder2, the users will be redirected to either Server2 or Server3. | <input type="radio"/> | <input type="radio"/> |
| If users from Site3 connect to \\contoso.com\Namespace\Folder2, the users will be redirected to either Server1, Server2, or Server3. | <input type="radio"/> | <input type="radio"/> |

Correct Answer:

Answer Area

| Statements | Yes | No |
|--|----------------------------------|----------------------------------|
| If users from Site1 connect to \\contoso.com\Namespace\Folder2, the users will always be redirected to Server1. | <input checked="" type="radio"/> | <input type="radio"/> |
| If users from Site2 connect to \\contoso.com\Namespace\Folder2, the users will be redirected to either Server2 or Server3. | <input type="radio"/> | <input checked="" type="radio"/> |
| If users from Site3 connect to \\contoso.com\Namespace\Folder2, the users will be redirected to either Server1, Server2, or Server3. | <input type="radio"/> | <input checked="" type="radio"/> |

QUESTION 4

The following question is difficult, take your time and use a piece of paper if you need. What is the network ID of the IP node 129.56.189.41 with a subnet mask of 255.255.240.0?

- A. 129.56.189.0
- B. 129.56.176.1

- C. 129.56.189.1
- D. 129.56.176.0

Correct Answer: D

To obtain the result, turn both numbers into their binary equivalents and line them up. Then perform the AND operation on each bit and write down the result.

10000001 00111000 10111101 00101001 IP Address

11111111 11111111 11110000 00000000 Subnet Mask 10000001 00111000 10110000 00000000 Network ID

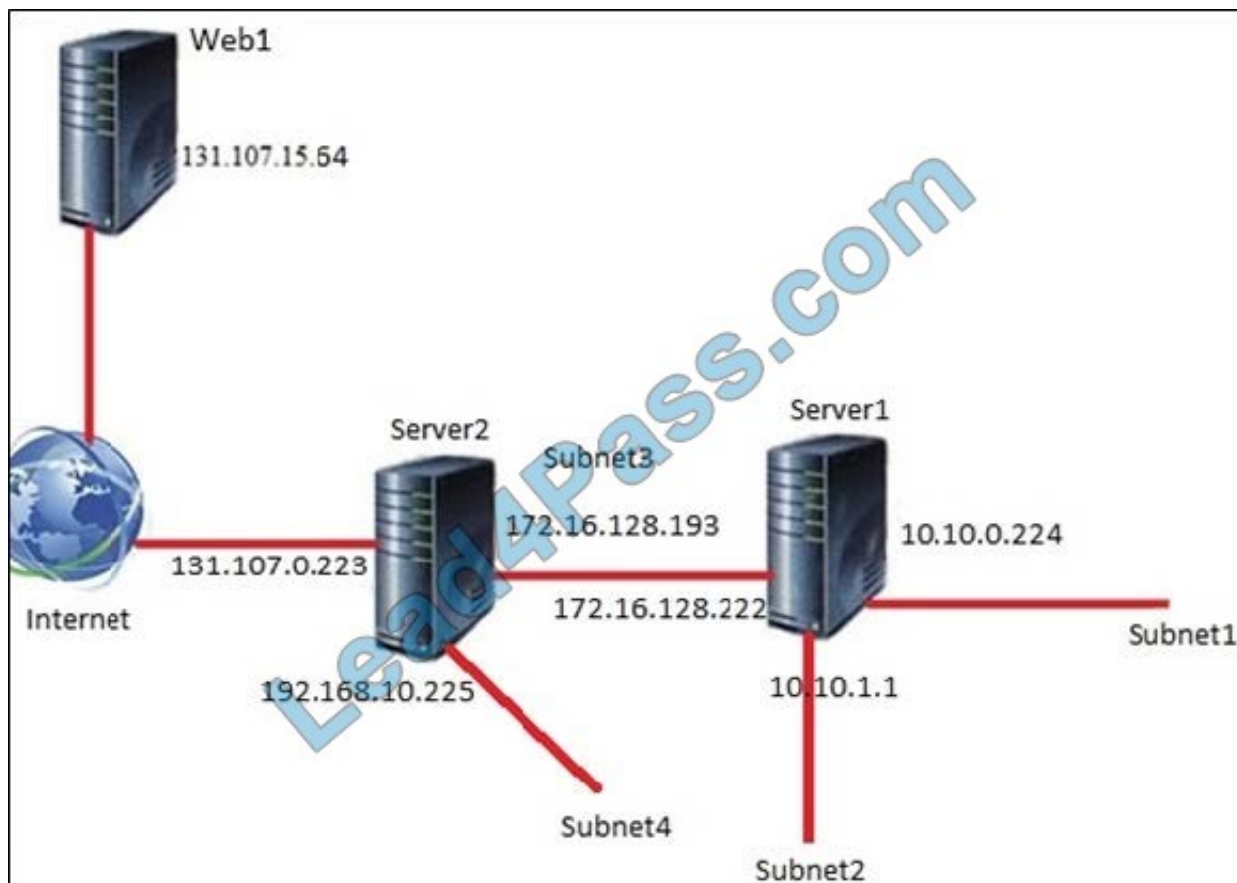

The result of the bit-wise logical AND of the 32 bits of the IP address and the subnet mask is the network ID 129.56.176.0.

QUESTION 5

HOTSPOT

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

You are a network administrator for a company named Contoso, Ltd. The network is configured as shown in the exhibit. (Click the Exhibit tab.)

You install the Remote Access server role on Server2. Server2 has the following configured:

1.
Network address translation (NAT)
 2.
The DHCP Server server role
- The Security Policy of Contoso states that only TCP ports 80 and 443 are allowed from the Internet to Server2.

You identify the following requirements:

1.
Add 28 devices to Subnet2 for a temporary project.
2.
Configure Server2 to accept VPN connections from the Internet.
3.
Ensure that devices on Subnet2 obtain TCP/IP settings from DHCP on Server2.

End of repeated scenario

You need to identify which subnet mask you must use for subnet2. The solution must minimize the number of available IP addresses on Subnet2. What subnet mask should you identify? To answer, select the appropriate options in the answer area.

Hot Area:

255.255.
