#### **QUESTION 1**

You have servers that run Windows Server 2016 and devices that run Windows 10 Enterprise.

You have a certification authority (CA) that issued computer certificates to all the servers and devices.

You plan to allow the Windows 10 devices to connect to the network remotely by using VPN device tunnels.

You install the Remote Access server role on a server. From the Routing and Remote Access console, you configure the server for the VPN role.

You need to ensure that the Windows 10 devices can establish the VPN tunnel before users sign in to the devices.

What should you do on the VPN server?

A. From Authentication Methods, select Allow machine certificate authentication for IKEv2.

- B. Modify the ports properties and add additional SSTP ports.
- C. From Authentication Methods, select Extensible authentication protocol (EAP).
- D. Modify the ports properties and add additional IKEv2 ports.

Correct Answer: A

#### **QUESTION 2**

Your network contains an Active Directory domain named contoso.com. The domain contains three servers named Server1, Server2, and Server3 that run Windows Server 2016.

Server1 has IP Address Management (IPAM) installed. Server2 and Server3 have the DHCP Server role installed and have several DHCP scopes configured. The IPAM server retrieves data from Server2 and Server3.

A domain user named User1 is a member of the groups shown in the following table.

Server name	Group
Server2	DHCP Administrators
Server3	DHCP Users

On Server1, you create a security policy for User1. The policy grants the IPAM DHCP Scope Administrator Role with the \Global access scope to the user. Which actions can User1 perform? To answer, select the appropriate options in the answer area.

Hot Area:

## Answer Area

From Server Manager on Server1, User1 can modify the description of the DHCP scopes:

On Server2 only On Server3 only On both Server2 and Server3

From Server Manager on Server1, User1 can create a new DHCP scope

	V
On Server2 only	
On Server3 only	
On both Server2 and Server3	

-

Correct Answer:

# **Answer Area**

From Server Manager on Server1, User1 can	ann	▼
modify the description of the DHCP scopes:	On Server2 only	
	On Server3 only	
	On both Server2 and Server3	
From Server Manager on Server1, User1 can		•
From Server Manager on Server1, User1 can create a new DHCP scope	On Server2 only	V
	On Server2 only On Server3 only	V

#### **QUESTION 3**

#### HOTSPOT

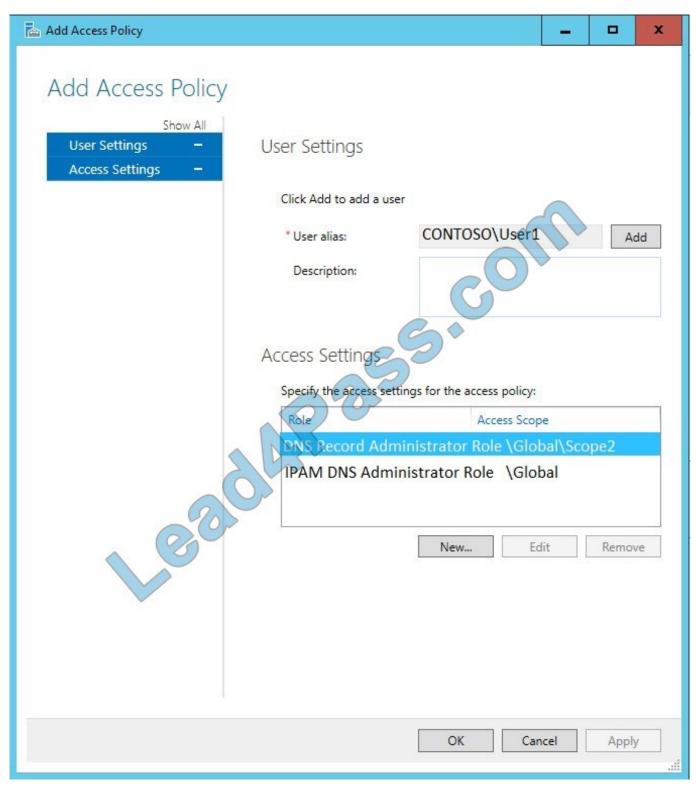

Your network contains an Active Directory domain named contoso.com. The domain contains a domain controller named Server1 and a member server named Server2.

Server1 has the DNS Server role installed. Server2 has IP Address Management (IPAM) installed. The IPAM server retrieves zones from Server1 as shown in the following table.

Zone name	Dynamic update setting	Access scope
Adatum.com	Secure	\Global
Fabrikam.com	None V	\Global\Scope2

The IPAM server has one access policy configured as shown in the exhibit. (Click the Exhibit tab.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Hot Area:

Statements	Yes	No
User1 can add a host (A) record to adatum.com	0	O
User1 can add a host (A) record to fabrikam.com	0	0
User1 can delete the fabrikam.com zone	0	0
Correct Answer:		
Correct Answer.		
Statements	Yes	No
	Yes	No
Statements		<b>No</b>

#### **QUESTION 4**

You have a DHCP server named Server1 that runs Windows Server 2016. You run Get-DhcpServerv4Scope, and you receive the following results.

ScopeId	SubnetMask	Name	State	StartRange	EndRange	LeaseDuration
				×		
172.16.0.0	255.255.255.0	Scope1	Active	172.16.0.10	172.16.0.250	8.00:00:00

You run Get-DhcpServerv4FilterList, and you receive the following results.

You run Get-DhcpServerv4Filter, and you receive the following results.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each selection is worth one point.

#### Hot Area:

#### Answer Area

Statements	Yes	No
A device that has a MAC address of AABBCCDDEEFF can obtain an IP address from Server1.	0	0
A device that has a MAC address of BBCCDDEEFFAA can obtain an IP address from Server1.	0	0
A device that has a MAC address of CCDDEEFFAABB can obtain an IP address from Server1.	0	0
Correct Answer:		
Answer Area		
Statements	Yes	No
A device that has a MAC address of AABBCCDDEEFF can obtain an IP address from Server1.	0	0
A device that has a MAC address of BBCCDDEEFFAA can obtain an IP address from Server1.	0	0
A device that has a MAC address of CCDDEEFFAABB can obtain an IP address from Server1.	0	0

#### **QUESTION 5**

Your network contains an Active Directory domain named contoso.com. The domain contains a DHCP server named Server1 that runs Windows Server 2016.

You have a DHCP scope for the 10.0.0.0/24 IP subnet. One hundred and fifty clients reside in the subnet. Fifty of the DHCP clients are NOT domain-joined.

You need to ensure that DHCP clients without a configured DNS suffix register automatically in a DNS zone named workgroup.contoso.com. The other DHCP clients must register in the DNS zone of their respective domain.

What should you do?

A. Configure the DNS properties of the 10.0.0.0/24 DHCP scope.

B. Create a DHCP policy that has a condition based on the fully qualified domain name (FQDN) criterion. Configure the IP address range properties of the policy.

C. Create a DHCP policy that has a condition based on the fully qualified domain name (FQDN) criterion. Configure the DNS properties of the policy.

D. Configure the 015 DNS Domain Name scope option in the 10.0.0.0/24 DHCP scope.

Correct Answer: C
