### QUESTION 1

You have a DHCP server named Server1.

Server1 has an IPv4 scope that serves 75 client computers that run Windows 10.

When you review the address leases in the DHCP console, you discover several leases for devices that you do not recognize.

You need to ensure that only the 75 Windows 10 computers can obtain a lease from the scope.

What should you do?

- A. Run the Add-DhcpServerv4ExclusionRange cmdlet.
- B. Create and enable a DHCP filter.
- C. Create a DHCP policy for the scope.
- D. Run the Add-DhcpServerv4OptionDefinition cmdlet.

Correct Answer: C

### QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution. After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Server1 that has the Network Policy and Access Services server role installed.

You create a Shared Secret Network Policy Server (NPS) template named Template1.

You need to view the shared secret string used for Template1.

Solution: From the Network Policy Server console, you view the properties of Template1.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

---

### QUESTION 3

## HOTSPOT

Your network contains an Active Directory domain named contoso.com. All domain controllers are DNS servers and host Active Directory-integrated zones for the domain. The zone allows secure and non-secure dynamic updates.

The domain contains several DHCP servers.

You plan to deploy 200 Linux computers. The name of each computer will be registered in the contoso.com DNS zone. The computers will receive their IP configuration from the DHCP servers.

You need to protect the DNS records of the Linux servers from being overwritten accidentally by another server that has the same name. The Linux servers must be prevented from registering in DNS directly.

What should you do? To answer, select the appropriate options in the answer area

NOTE: Each correct selection is worth one point.

Hot Area:

On the DNS servers:

Modify the Security settings of the contoso.com zone.
Select Secure cache against pollution for the DNS servers.
Set Dynamic updates to Secure only for the contoso.com zone.

On the DHCP servers:

Configure Conflict detection attempts.
Create a Vendor Class-based policy.
Select Enable Name Protection.

Correct Answer:

On the DNS servers:

Modify the Security settings of the contoso.com zone.
Select Secure cache against pollution for the DNS servers.
Set Dynamic updates to Secure only for the contoso.com zone.

On the DHCP servers:

Configure Conflict detection attempts.
Create a Vendor Class-based policy.
Select Enable Name Protection.

#### QUESTION 4

DRAG DROP

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016.

You install IP Address Management (IPAM) on Server1.

You need to manually start discovery of the servers that IPAM can manage in contoso.com.

Which three cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Select and Place:

### Cmdlets

- Add-IpamAddress
- Add-IpamDiscoveryDomain
- Add-IpamSubnet
- Update-IpamServer
- Invoke-IpamServerProvisioning
- Start-ScheduledTask

### Answer Area

Correct Answer:

### Cmdlets

- 
- 
- Add-IpamSubnet
- Update-IpamServer
- 
- Start-ScheduledTask

### Answer Area

- Add-IpamDiscoveryDomain
- Add-IpamAddress
- Invoke-IpamServerProvisioning

### QUESTION 5

You have a server named Server1 that has a Server Core installation of Windows Server 2016. Server1 is configured to obtain an IP address automatically.

You need to configure the IPv4 address, netmask, and default gateway manually for a network interface named Ethernet on Server1.

What should you run?

- A. ipconfig.exe
- B. netsh.exe
- C. New-NetIPAddress
- D. Set-NetIPv4Protocol

Correct Answer: C
