QUESTION 1

Your network contains an active Directory domain. The domain contains 20 domain controllers.

You discover that some Group Policy objects (GPOs) are not being applied by all the domain controllers.

You need to verify whether GPOs replicate successfully to all the domain controllers.

What should you do?

- A. Set BurFlags in the registry, and then restart the File Replication Service (FRS). Run dcdiag.exe for each domain controller.
- B. Set BurFlags in the registry, and then restart the File Replication Service (FRS). View the Directory Service event log.
- C. From Group Policy Management, view the Status tab for the domain.
- D. Run repadmin.exe for each GPO.

Correct Answer: C

QUESTION 2

Your network contains an Active Directory domain named contoso.com.

All users are in an organizational unit (OU) named Corp_Users.

You plan to modify the description of all the users who have a string of 514 in their mobile phone number.

You need to view a list of the users that will be modified.

What should you run?

- A. `Get-ADOrganizationalUnit-Filter "mobilePhone-Like '*514*\'\' "`
- B. `Get-ADUser-LDAPFilter "(mobilePhone= '*514*\'\'")"`
- C. `Get-ADUser-Filter "mobilePhone-Like '*514*\'\' "`
- D. `Get-ADOrganizationalUnit-LDAPFilter "(mobilePhone= '*5514*\'\'")"`

Correct Answer: C

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com. The forest contains an Active Directory Rights Management Services (AD RMS) deployment.

Your company establishes a partnership with another company named Fabrikam, Inc. The network of Fabrikam contains an Active Directory forest named fabrikam.com and an AD RMS deployment.

You need to ensure that the users in contoso.com can access rights protected documents sent by the users in fabrikam.com.

Solution: From AD RMS in contoso.com, you configure fabrikam.com as a trusted publisher domain.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

By default, an AD RMS Licensing Server can issue use licenses for only content where it originally issued the publishing license. In some situations, this may not be acceptable. In order to specify a cluster that is allowed to issue use licenses for content protected by a different cluster, the first cluster must be defined as a trusted publishing domain. If content was published by another certification cluster either in your organization, for example, a subsidiary organization in another forest, or in a separate organization, your AD RMS cluster can grant use licenses to users for this content by configuring a Trusted Publishing Domain on your AD RMS cluster. By adding a Trusted Publishing Domain, you set up a trust relationship between your AD RMS cluster and the other certification cluster by importing the Trusted Publishing Certificate of the other cluster.

QUESTION 4

Your company has multiple branch offices.

The network contains an Active Directory domain named contoso.com.

In one of the branch offices, a new technician is hired to add computers to the domain.

After successfully joining multiple computers to the domain, the technician fails to join any more computers to the domain.

You need to ensure that the technician can join an unlimited number of computers to the domain.

What should you do?

A. Run the Delegation of Control Wizard on the Computers container.

B. Run the redircmp.exe command.

- C. Modify the Security settings of the technician's user account.
- D. Add the technician to the Windows Authorization Access group.

Correct Answer: A

QUESTION 5

You deploy a new certification authority (CA) to a server that runs Windows Server 2016.

You need to configure the CA to support recovery of certificates.

What should you do first?

- A. Assign the Request Certificates permission to the user account that will be responsible for recovering certificates.
- B. Configure the Key Recovery Agent templates as a certificate template to issue.
- C. Modify the Recovery Agents settings from the properties of the CA.
- D. Modify the extension of the OCSP Response Signing template.

Correct Answer: B
