QUESTION 1

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 hosts a virtual machine named VM1.

You need to provide VM1 with direct access to a graphics processing unit (GPU) on Server1.

What should you do first?

- A. On VM1, install the Quality Windows Audio Video Experience (qWave) feature.
- B. Disable the display adapter device on Server1.
- C. In the settings of VM1, add a RemoteFX 3D Video Adapter.
- D. Dismount the display adapter on Server1.

Correct Answer: B

Before the physical device is allowed to be passed through to the VM, the device must be disabled on the host system. The physical device must be accessible/available exclusively to the VM only.

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

In this section, you will see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals.

Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com.

The domain contains a DNS server named Server1.

All client computers run Windows 10.

On Server1, you have the following zone configuration.

ZoneName	ZoneType	IsAutoCreated	IsDsIntegrated	IsReverseLookupZone	IsSigned
_msdcs.contoso.com	Primary	False	True	False	False
0.in-addr.arpa	Primary	True	False	True	False
127.in-addr.arpa	Primary	True	False	True	False
255.in-addr.arpa	Primary	True	False	True	False
adatum.com	Forwarder	False	False	False	False
contoso.com	Primary	False	True	False	False
fabrikan.com	Primary	False	True	False	True
TrustAnchors	Primary	False	True	False	False

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4.

Server1 must resolve queries from all other DNS clients.

Solution: From Windows Firewall with Advanced Security on Server1, you create an inbound rule.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

QUESTION 3

You deploy a Hyper-V server named Server1 in an isolated test environment. The test environment is prevented from accessing the Internet. Server1 runs the Datacenter edition of Windows Server 2016. You plan to deploy the following guest virtual machines on the server:

Quantity	Operating system	Domain member
10	Windows Server 2012 R2	Yes
4	Windows Server 2016	No
5	Windows Server 2016	Yes

Which activation model should you use for the virtual machines?

- A. Multiple Activation Key (MAK)
- B. Key Management Service (KMS)
- C. Original Equipment Manufacturer (OEM) key
- D. Automatic Virtual Machine Activation (AVMA)

Correct Answer: D

On virtualization servers that are activated using Volume Licensing or OEM licensing, AVMA offers several benefits. Server datacenter managers can use AVMA to do the following:

*

Activate virtual machines in remote locations

*

Activate virtual machines with or without an internet connection

*

Track virtual machine usage and licenses from the virtualization server, without requiring any access rights on the virtualized systems Note: AVMA requires a Microsoft Virtualization Server running Windows Server 2012 R2 Datacenter or Windows Server 2016 Datacenter.

QUESTION 4

You have a Hyper-V host that runs Windows Server 2016. The Hyper-V host has a virtual machine named VM1.

You have a VHD named VHD1.vhdx that has a generalized image of Windows Server 2016.

You plan to create multiple virtual machines that will use the generalized image.

You need to create differencing disks based on VHD1.vhdx.

What command should you run? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

	▼	-Path "C:\VHDs\VHD1Diff.VHDX"
Add-VMHardDiskDrive		
New-VHD		
Set-VHD		
Set-VMHardDiskDrive		

	▼	"C:\VHDs\VHD1.VHDX" - Differencing
-ParentPath		
-SourceDisk		

Correct Answer:

Answer Area

The screenshot shows a PowerShell command execution window. A context menu is open over the command, with 'New-VHD' selected. The command is: `-Path "C:\VHDs\VHD1Diff.VHDX"`. Below the command, a list of parameters is shown: `-ParentPath` and `-SourceDisk`. The command is: `"C:\VHDs\VHD1.VHDX" - Differencing`.

```
PS C:\> New-VHD -Path c:\Diff.vhdx -ParentPath c:\Base.vhdx -Differencing
```

This example creates a VHDX-format differencing virtual hard disk with a parent path of c:\Base.vhdx.

QUESTION 5

You have a server named Server1 that runs Windows Server 2016 and has the File and Storage Services server role installed.

Server1 has an ReFS-formatted volume named Volume1 that is 512 GB. Volume1 is mounted as C:\App1\temp.

You need to ensure that you can enable deduplication of Volume1.

What should you do?

- A. Initialize the physical disk that contains Volume1.
- B. Unmount Volume1.
- C. Format Volume1.
- D. Install a Windows feature.

Correct Answer: D
