### QUESTION 1

Your network contains an Active Directory domain named contoso.com.

The domain contains 10 computers that are in an organizational unit (OU) named OU1.

You deploy the Local Administrator Password Solution (LAPS) client to the computers.

You link a Group Policy object (GPO) named GPO1 to OU1, and you configure the LAPS password policy settings in GPO1.

You need to ensure that the administrator passwords on the computers in OU1 are managed by using LAPS.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Restart the domain controller that hosts the PDC emulator role.
- B. Update the Active Directory Schema.
- C. Enable LDAP encryption on the domain controllers.
- D. Restart the computers.
- E. Modify the permissions on OU1.

Correct Answer: BE

---

### QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com. The domain contains multiple Hyper-V hosts.

You need to deploy several critical line-of-business applications to the network; to meet the following requirements:

\*The resources of the applications must be isolated from the physical host.

\*Each application must be prevented from accessing the resources of the other applications. \*The configurations of the applications must be accessible only from the operating system that hosts the application.

Solution: You deploy a separate Windows container for each application.

Does this meet the goal?

- A. Yes

B. No

Correct Answer: A

By using Windows Container-The resources of the applications must be isolated from the physical host (ACHIEVED, as a single container could only access its own resources, but not others)-Each application must be prevented from accessing the resources of the other applications. (ACHIEVED, as a single container could only access its own resources, but not others)-The configurations of the applications must be accessible only from the operating system that hosts the application. (ACHIEVED, you can use DockerFile or DockerRun to push configurations to containers from the Container Host OS) References:

### QUESTION 3

\_\_\_\_\_ enables easier management for BitLocker enabled desktops and servers in a domain environment by providing automatic unlock of operating system volumes at system reboot when connected to a wired corporate network. This feature requires the client hardware to have a DHCP driver implemented in its UEFI firmware.

- A. Network Unlock
- B. EFS recovery agent
- C. JEA
- D. Credential Guard

Correct Answer: A

<https://docs.microsoft.com/en-us/windows/device-security/bitlocker/bitlocker-how-to-enable-network-unlock>

---

### QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com. The domain contains a computer named Computer1 that runs Windows 10. Computer1 connects to a home network and a corporate network.

The corporate network uses the 172.16.0.0/24 address space internally.

Computer1 runs an application named App1 that listens to port 8080.

You need to prevent connections to App1 when Computer1 is connected to the home network.

Solution: From Group Policy Management you create a software restriction policy.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

Software Restriction Policy does not filter incoming network traffic, what you actually need is Windows Firewall Inbound Rule on the Private profile References: [https://technet.microsoft.com/en-us/library/hh831534\(v=ws.11\).aspx](https://technet.microsoft.com/en-us/library/hh831534(v=ws.11).aspx)

---

#### QUESTION 5

A shielding data file (also called a provisioning data file or PDK file) is an encrypted file that a tenant or VM owner creates to protect important VM configuration information. A fabric administrator uses the shielding data file when creating a shielded VM, but is unable to view or use the information contained in the file.

Which information can be stored in the shielding data file?

- A. Administrator credentials
- B. All of these
- C. A Key Protector
- D. Unattend.xml

Correct Answer: B
