QUESTION 1

You have a dataset that has multiple blocks and only numeric variables.

You are computing in a local compute context.

You plan to lag a variable named `x` to create a new variable named `x_lagged` by using a transform function. You will create a new element in the output of the function.

You need to minimize the number of missing values.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Assign a value to the first value of `x_lagged` in the current block.
- B. Use `rxSet` to store the last value of `x_lagged` in the current block.
- C. Use `rxSet` to store the last value of `x` in the current block.
- D. Use `rxGet` to retrieve the first value of `x` in the next block to be processed.
- E. Use `rxGet` to retrieve a value stored in processing of the prior block.

Correct Answer: ACD

QUESTION 2

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You need to generate a residual based on two columns. The solution must build a trend indicator. Which function should you use?

- A. `rxPredict`
- B. `rxLogit`
- C. `summary`
- D. `rxLinMod`
- E. `rxTweedie`
- F. `stepAic`
- G. `rxTransform`
- H. `rxDataStep`

Correct Answer: A

QUESTION 3

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.

Information and details provided in a question apply only to that question.

You need to estimate a model where the outcome variable is continuous, is in the range of $[0, \text{inf}]$, and has a substantial mass at an exact value of 0.

Which function should you use?

- A. rxPredict
- B. rxLogit
- C. summary
- D. rxLinMod
- E. rxTweedie
- F. stepAic
- G. rxTransform
- H. rxDataStep

Correct Answer: F

QUESTION 4

You have a dataset.

You need to repeatedly split randomly the dataset so that 80 percent of the data is used as a training set and the remaining 20 percent is used as a test set.

Which method should you use?

- A. threshold
- B. binary classification
- C. imputation
- D. cross validation
- E. pruning

Correct Answer: D

QUESTION 5

You need to build a model that looks at the probability of an outcome. You must regulate between L1 and L2. Which classification method should you use?

- A. Two-Class Neural Network
- B. Two-Class Support Vector Machine
- C. Two-Class Decision Forest
- D. Two-Class Logistic Regression

Correct Answer: D
