### QUESTION 1

You have an on-premises data warehouse that uses Microsoft SQL Server 2016. All the data in the data warehouse comes from text files stored in Azure Blob storage. The text files are imported into the data warehouse by using SQL Server

Integration Services (SSIS). The text files are not transformed.

You need to migrate the data to an Azure SQL data warehouse in the least amount of time possible.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Use SSIS to upload the files in Azure Blob storage to tables in the Azure SQL data warehouse.
- B. Execute the CREATE EXTERNAL TABLE AS SELECT statement to export the data.
- C. Use AzCopy to transfer the data from the on-premises data warehouse to Azure SQL data warehouse.
- D. Execute the CREATE TABLE AS SELECT statement to load the data.
- E. Define external tables in the Azure SQL data warehouse that map to the existing files in Azure Blob storage.

Correct Answer: DE

---

### QUESTION 2

You plan to use Microsoft Azure Event Hubs to ingest sensor data. You plan to use Azure Stream Analytics to analyze the data in real time and to send the output directly to Azure Data Lake Store.

You need to write events to the Data Lake Store in batches.

What should you use?

- A. Apache Storm in Azure HDInsight
- B. Stream Analytics
- C. Microsoft SQL Server Integration Services (SSIS)
- D. the Azure CLI

Correct Answer: B

---

### QUESTION 3

DRAG DROP

You are monitoring a Microsoft Azure SQL data warehouse.

You need to get the following information:

- The top 10 longest running queries
- The distributed query plan for a specific query

Which dynamic management view should you use for each piece of information? To answer, drag the appropriate dynamic management views to the correct pieces of information. Each dynamic management view may be used once, more

than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Dynamic Management Views	Answer Area
sys.dm_pdw_dms_workers	<p>The top 10 longest running queries: <input type="text" value="Dynamic Management Views"/></p> <p>The distributed query plan for a specific query: <input type="text" value="Dynamic Management Views"/></p>
sys.dm_pdw_exec_requests	
sys.dm_pdw_exec_sessions	
sys.dm_pdw_request_steps	
sys.dm_pdw_waits	

Correct Answer:

Dynamic Management Views	Answer Area
sys.dm_pdw_dms_workers	<p>The top 10 longest running queries: <input type="text" value="sys.dm_pdw_exec_requests"/></p> <p>The distributed query plan for a specific query: <input type="text" value="sys.dm_pdw_request_steps"/></p>
sys.dm_pdw_exec_sessions	
sys.dm_pdw_waits

#### QUESTION 4

DRAG DROP

You have a Microsoft Azure SQL data warehouse named DW1. Data is located to DW1 once daily at 01:00.

A user accidentally deletes data from a fact table in DW1 at 09:00.

You need to recover the lost data. The solution must prevent the need to change any connection strings and must

minimize downtime.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Resume DW1.	
Restore the database to a database named DW2.	
Pause DW2.	
Delete DW1.	
Rename DW2.	
Restore the database to a database named DW1.	
Pause DW1.	

Correct Answer:

Actions	Answer Area
Resume DW1.	Restore the database to a database named DW2.
	Delete DW1.
Pause DW2.	Rename DW2.
Restore the database to a database named DW1.	
Pause DW1.	

### QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a table named Table1 that contains 3 billion rows. Table1 contains data from the last 36 months.

At the end of every month, the oldest month of data is removed based on a column named DateTime.

You need to minimize how long it takes to remove the oldest month of data.

Solution: You implement a columnstore index on the DateTime column.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A
