QUESTION 1

A company has data centers in Seattle and New York. A highspeed link connects the data centers. Each data center runs a virtualization infrastructure that uses HyperV Server 2012 and HyperV Server 2012 R2. Administrative users from the

Seattle and New York offices are members of Active Directory Domain Services groups named SeattleAdmins and NewYorkAdmins, respectively.

You deploy one System Center Virtual Machine Manager (SCVMM) in the Seattle data center. You create two private clouds named SeattleCloud and NewYorkCloud in the Seattle and New York data centers, respectively.

You have the following requirements:

Administrators from each data center must be able to manage the virtual machines and services from their location by using a web portal.

Administrators must not apply new resource quotas or change resource quotas.

You must manage public clouds by using the existing SCVMM server.

You must use the minimum permissions required to perform the administrative tasks.

You need to configure the environment.

What should you do?

A. For both the Seattle and New York admin groups, create a User Role and assign it to the Application Administrator profile. Add the Seattle and New York private clouds to the corresponding User Role.

B. For both the Seattle and New York admin groups, create a User Role and assign it to the Delegated Administrator profile. Add the Seattle and New York private clouds to the corresponding User Role.

C. For both the Seattle and New York admin groups, create a User Role and assign it to the Tennant Administrator profile. Add the Seattle and New York private clouds to the corresponding User Role.

D. Add both SeattleAdmins and NewYorkAdmins to the Local Administrators group of each HyperV host in Seattle and New York, respectively.

Correct Answer: B

QUESTION 2

Your network contains an Active Directory domain named contoso.com.

All client computers run either Windows 7 or Windows 8.

Some users work from customer locations, hotels, and remote sites. The remote sites often have firewalls that limit connectivity to the Internet.

You need to recommend a VPN solution for the users.

Which protocol should you include in the recommendation?

- A. PPTP
- B. SSTP
- C. IKEv2
- D. L2TP/IPSec

Correct Answer: B

QUESTION 3

You need to recommend a software update solution that meets the technical requirements. What should you recommend deploying to each branch office?

- A. An endpoint protection point
- B. A distribution point
- C. A management point
- D. An enrollment prox point

Correct Answer: B

QUESTION 4

Your network contains an Active Directory domain named contoso.com. The domain contains three VLANs. The VLANs are configured as shown in the following table.

VLAN	Contents	Routing enabled to
VLAN 1	Client computers	VLAN 2
VLAN 2	<ul style="list-style-type: none">• Application servers• Domain controllers• Network Policy Service (NPS) servers	VLAN 1 and the Internet
VLAN 3	Windows Server Update Services (WSUS) server	Nowhere

All client computers run either Windows 7 or Windows 8.

Goal: You need to implement a solution to ensure that only the client computers that have all of the required security updates installed can connect to VLAN 1. The solution must ensure that all other client computers connect to VLAN 3.

Solution: You implement the 802.1x Network Access Protection (NAP) enforcement method.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

QUESTION 5

Your network contains an Active Directory domain named contoso.com. You deploy Active Directory Certificate Services (AD CS). You plan to deploy 100 external Web servers that will be publicly accessible and will require Secure

Sockets Layer (SSL) certificates.

You also plan to deploy 50,000 certificates for secure email exchanges with Internetbased recipients. You need to recommend a certificate services solution for the planned deployment. What should you recommend? More than one answer

choice may achieve the goal. Select the BEST answer.

A. Deploy a certification authority (CA) that is subordinate to an external root CA.

B. Purchase 50,100 certificates from a trusted thirdparty root certification authority (CA).

C. Distribute a copy of the root certification authority (CA) certificate to external relying parties.

D. Instruct each user to request a Secure Email certificate from a trusted thirdparty root CA, and then purchase 100 Web server certificates.

Correct Answer: A
