QUESTION 1

You need to recommend a configuration for the DHCP infrastructure.

Answer Area

Server on which to deploy the DHCP Server server role:

DHCP failover mode:

DHCP failover setting to configure:

What should you recommend? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

Server on which to deploy the DHCP Server server role:

DHCP failover mode:

DHCP failover setting to configure:

Correct Answer:

Answer Area

Server on which to deploy the DHCP Server server role:

DHCP failover mode:

DHCP failover setting to configure:

QUESTION 2

Your company has an office in New York.

Many users connect to the office from home by using the Internet.

You deploy an Active Directory Certificate Services (AD CS) infrastructure that contains an enterprise certification authority (CA) named CA1. CA1 is only available from hosts on the internal network. You need to ensure that the

certificate revocation list (CRL) is available to all of the users. What should you do? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Create a scheduled task that copies the CRL files to a Web server.
- B. Run the InstallADCSWebEnrollment cmdlet.
- C. Run the InstallEnrollmentPolicyWebService cmdlet.
- D. Deploy a Web server that is accessible from the Internet and the internal network.
- E. Modify the location of the Authority Information Access (AIA).
- F. Modify the location of the CRL distribution point (CDP).

Correct Answer: DF

QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains four servers on a test network. The servers are configured as shown in the following table.

| Server name | Role |
|-------------|---------------------------|
| Server1 | Hyper-V |
| Server2 | File and Storage Services |
| Server3 | File and Storage Services |
| Server4 | File and Storage Services |

Server1 uses the storage shown in the following table.

| Drive name | Type |
|------------|---|
| C: | Locally attached IDE disk |
| D: | Locally attached SCSI disk |
| E: | Tiered storage space from locally attached SCSI and S... drives |

You perform the following tasks:

On Server2, you create an advanced SMB share named Share2A and an applications SMB share named Share2B.

On Server3, you create an advanced SMB share named Share3.

On Server4, you create an applications SMB share named Share4.

You add Server3 and Server4 to a new failover cluster named Clus1. On Clus1, you configure the File Server for general use role, you create a quick SMB share named Share5A, and then you create an applications SMB share named

Share5B.

You plan to create a failover cluster of two virtual machines hosted on Server1. The clustered virtual machines will use shared .vhdx files.

You need to recommend a location to store the shared .vhdx files.

Where should you recommend placing the virtual hard disk (VHD)?

- A. \\Clus1\Share5A
- B. \\Server2\Share2A
- C. \\Server4\Share4
- D. the D drive on Server1

Correct Answer: C

QUESTION 4

You need to design a solution that meets the monitoring requirements. What should you do?

- A. In Operations Manager, create an override for the HR application monitor that will close any open HR application performance tickets in Service Manager.
- B. In Service Manager, create a queue that will open a new ticket or close any existing HR application performance ticket when the performance alert has been resolved in Operations Manager.
- C. In Service Manager, create a workflow that will open a new ticket or close any existing HR application performance ticket when the performance alert has been resolved in Operations Manager.

D. In Service Manager, create an alert routing rule in the Operations Manager Alert connector that creates a new incident when the HR application produces a performance alert.

Correct Answer: C

QUESTION 5

Your network contains multiple servers that run Windows Server 2012.

The network contains a Storage Area Network (SAN) that only supports Fibre Channel connections. You have two failover clusters. The failover clusters are configured as shown in the following table.

| Failover cluster name | Role | Members |
|-----------------------|-----------------|-----------|
| Cluster1 | File Services | Two nodes |
| Cluster2 | Hyper-V hosting | Six nodes |

Only the members of Cluster1 can connect to the SAN.

You plan to implement 15 highly available virtual machines on Cluster2. All of the virtual machines will be stored in a single shared folder.

You need to ensure that the VHD files of the virtual machines can be stored on the SAN. What should you do? (Each correct answer presents a complete solution. Choose all that apply.)

- A. From a node in Cluster2, create a Virtual Fibre Channel SAN.
- B. From a node in Cluster1, create a Virtual Fibre Channel SAN.
- C. From Cluster1, add the iSCSI Target Server cluster role.
- D. From Cluster1, configure the clustered File Server role of the File Server for scaleout application data type.

Correct Answer: AD
